Contact erwin

Understanding your Support

Review [support maintenance programs and offerings](#).

Registering for Support

Access the [erwin support](#) site and click Sign in to register for product support.

Accessing Technical Support

For your convenience, erwin provides easy access to "One Stop" support for [erwin Data Intelligence Suite \(DI Suite\)](#), and includes the following:

- Online and telephone contact information for technical assistance and customer services
- Information about user communities and forums
- Product and documentation downloads
- erwin Support policies and guidelines
- Other helpful resources appropriate for your product

For information about other erwin products, visit <http://erwin.com/>.

Provide Feedback

If you have comments or questions, or feedback about erwin product documentation, you can send a message to distechpubs@erwin.com.

erwin Data Modeler News and Events

Visit www.erwin.com to get up-to-date news, announcements, and events. View video demos and read up on customer success stories and articles by industry experts.

Managing Metadata

This section walks you through the metadata management. Metadata management is done via Metadata Manager. It involves scanning metadata from a data source and storing it in a central repository.

You can preview the data, profile it, generate pattern summary report and provide data quality score.

After performing source to target mappings in the Mapping Manager, you can run Forward or Reverse lineages and perform impact analysis in the Metadata Manager.

For further information on accessing and using the Metadata Manager, refer to the [Using Metadata Manager](#) topic.

Using Metadata Manager

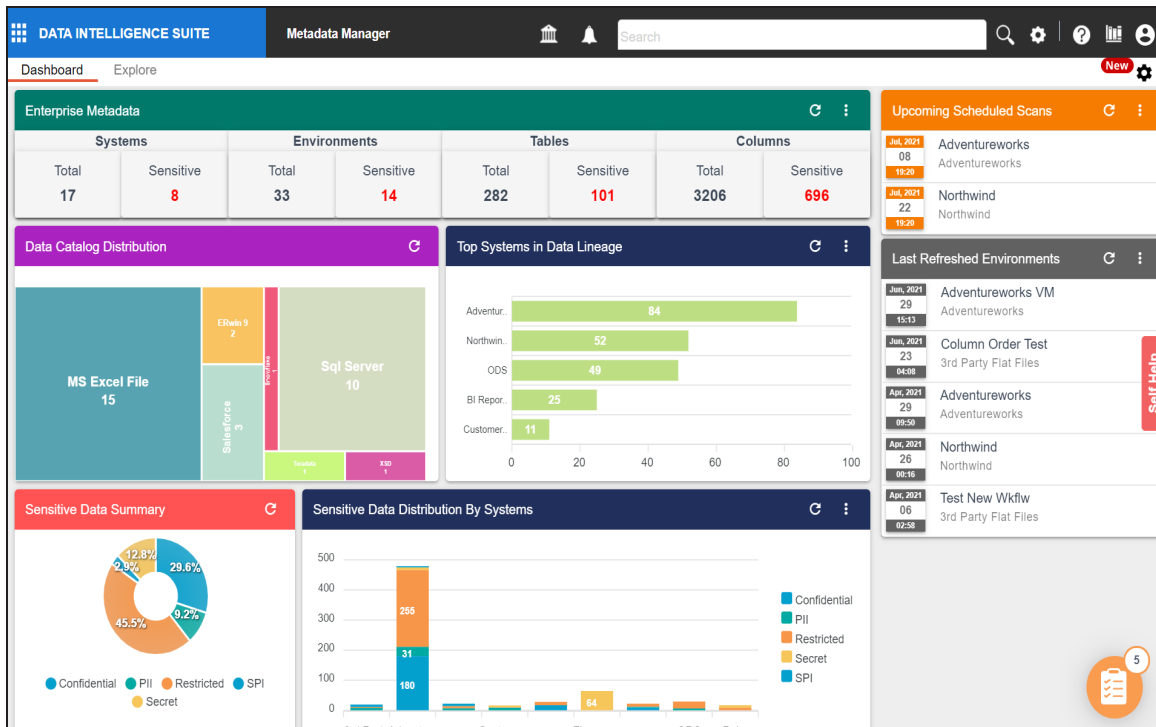

To access the Metadata Manager, go to **Application Menu > Data Catalog > Metadata Manager**.

Based on your configuration, either the Dashboard tab or the Explore tab opens. To configure the landing tab, click  on the top-right corner to set either of the following tabs as default:

- [Dashboard](#)
- [Explore](#)

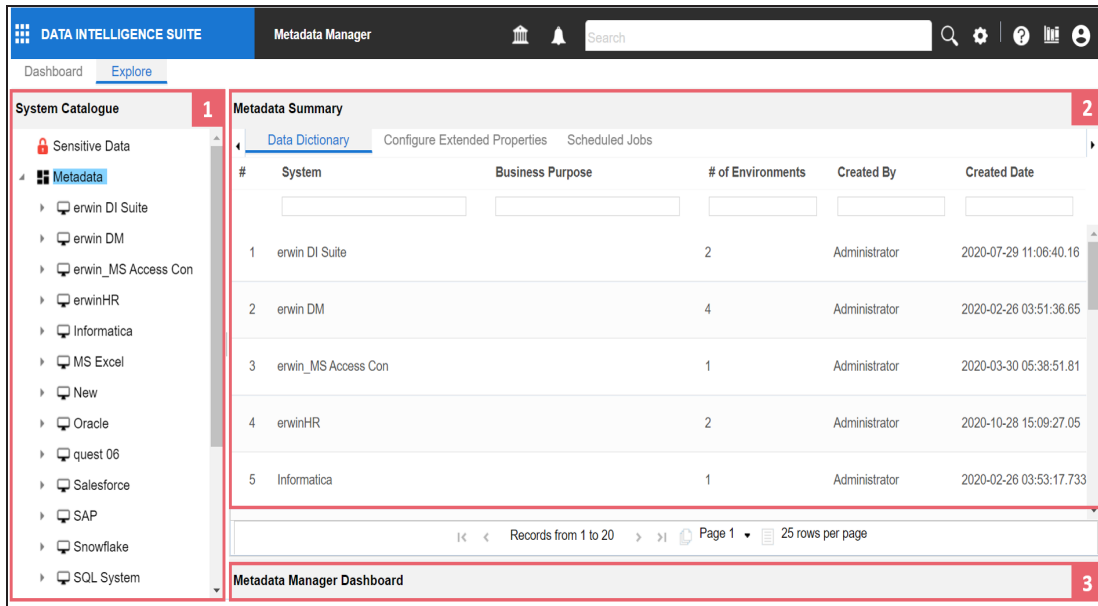

Dashboard

The Dashboard tab displays a snapshot of the underlying data in the Metadata Manager. This includes information about technical assets, their sensitivity, associations, and usage in mappings. For more information about the Dashboard tab, refer to the [Viewing Metadata Manager Dashboard](#) topic.

Explore

The Explore tab is the primary work area. It displays the scanned or imported metadata in a hierarchy and lets you manage metadata. On the Explore tab, you can scan metadata from data sources, associate technical assets with other assets, view mind maps, analyze data lineage, and so on.

UI Section	Function
1-System Catalogue	Use this pane to browse through your metadata that is stored in a hierarchical manner, System > Environment > Table > Column.
2-Right Pane	Use this pane to view or work on the data based on your selection in the System Catalogue.
3-Metadata Manager Dashboard	Use this pane to view consolidated reports on system overview, system usage in mappings, system summary, and sensitive data indicators.

Managing metadata involves the following:

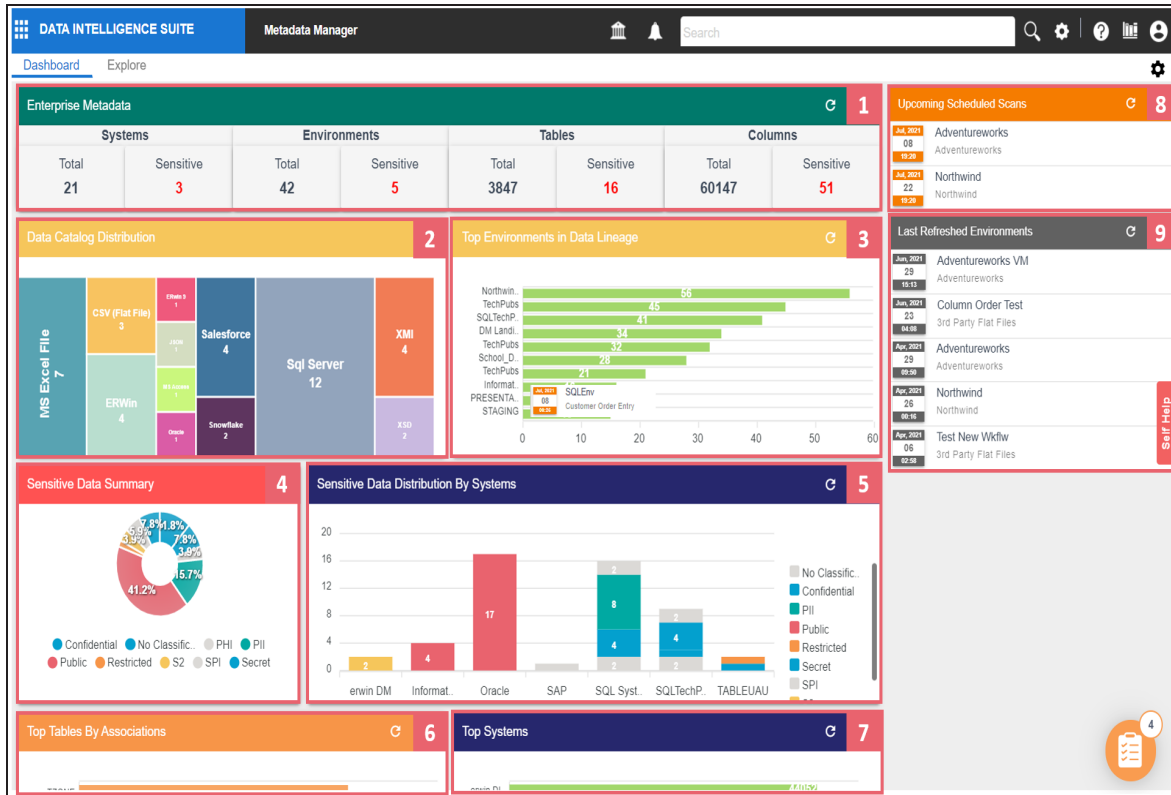

- [Creating and managing systems](#)
- [Creating and managing environments](#)
- [Scanning metadata from data sources](#)

- [Creating new versions of environments](#)
- [Downloading and updating data dictionary](#)
- [Running impact analysis](#)
- [Running lineage analysis](#)
- [Previewing and profiling data](#)
- [Configuring extended properties](#)
- [Creating and managing test cases for tables](#)
- [Viewing metadata manager dashboard](#)
- [Viewing access rights and data governance reports](#)

Viewing Metadata Manager Dashboard

The Metadata Manager Dashboard displays metrics that help you analyze and track your metadata. It presents this information using charts and graphs in a card format. By default, the dashboard displays information derived from all the assets. You can configure it to display only the information derived from the data that is assigned to you. For more information, refer to the [Configuring Asset Settings](#) topic.

To access Metadata Manager Dashboard, go to **Application Menu > Data Catalog > Metadata Manager > Dashboard**.

Each card is clickable and displays information points using charts or graphs that provide a snapshot of the underlying data.

UI Section	Function
1-Enterprise Metadata	It displays the number of each type of technical assets (systems, environments, tables, and columns) and the distribution of sensitive metadata across these technical assets.
2-Data Catalog Distribution	It displays the distribution of environments based on database type.
3-Top <Technical Assets> in Data Lineage	It displays top systems or environments based on number of columns used in mappings.
4-Sensitive Data Summary	It displays the distribution of sensitive columns based on SDI classification across all the systems.
5-Sensitive Data Distribution By <Tech-	It displays the number of sensitive columns and their SDI classifications in a system or environment.

UI Section	Function
nical_Assets>	
6-Top <Technical Assets> By Associations	It displays top technical assets based on their number of associations.
7-Top <Technical Assets>	It displays top systems or environments based on their number of tables and columns.
8-Upcoming Scheduled Scans	It displays a list of environments that are scheduled for a metadata scan.
9-Last Refereshed Environments	It displays a list of recently refreshed environments.

Enterprise Metadata

The Enterprise Metadata section displays the number of each technical asset and the distribution of sensitive metadata across these technical assets. This section has four clickable technical asset-specific cards. You can use them to drill down further and view technical asset details.

Systems

The Systems card displays the total number of systems and the number of sensitive systems. For example, the following Systems card displays that there are 21 systems, out of which three systems are sensitive.

Systems	
Total	Sensitive
21	3

You can drill down and view the list of systems and their sensitivity. To view the list of systems, on the **Systems** card, click **Total**. The System Details page appears. On this page, you can click a system name to navigate to a system and work on it.

System Details				
#	System Name	Sensitive Data Indicator	Sensitive Data Indicator Classification Name	Sensitive Data Indicator Class Description
1	erwin DM			
2	Informatica			
3	Salesforce			
4	SAP		SPI	Sensitive Personal Information
5	Snowflake			
6	SQL System		PII	Personally Identifiable Information

To focus on a list of sensitive systems only and view their details, on the **Systems** card, click **Sensitive**. The System Details page appears. It displays a list of sensitive systems.

Environments

The Environments card displays the total number of environments and the number of sensitive environments. For example, the following Environments card displays that there are 32 environments, out of which five environments are sensitive.

Environments	
Total	Sensitive
32	5

You can drill down and view the list of environments and their DBMS schema. To view the list of environments, on the **Environments** card, click **Total**. The Environment Details page appears. By default, it displays environments in all systems. On this page, you can click an environment name to navigate to an environment and work on it. Also you can use select a system in the Select System list to view environments in a specific system.

Environment Details

Select System
All

#	System Name	Environment Name	Environment Type	DBMS Name	DBMS Schema Name
1	erwin DM	DM Landing	DM Landing	ERWin XML File	DefaultSchema
2	erwin DM	DM Staging	DM Staging	ERWin XML File	DefaultSchema
3	erwin DM	TechPubs	Test	ERWin XML File	
4	erwin DM	Sql Server	Sql Server	Northwind	DBO

To focus on a list of sensitive environments only and view their details, on the **Environments** card, click **Sensitive**. The System Details page appears. By default, it displays a list of sensitive environments in all systems. To view sensitive environments in a specific system, you can use the Select System list.

Tables

The Tables card displays the total number of tables and the number of sensitive tables. For example, the following Tables card displays that there are 1312 tables, out of which 16 tables are sensitive.

Tables	
Total	Sensitive
1312	16

You can drill down and view the list of tables. To view the list of tables, on the **Tables** card, click **Total**. The Table Details page appears. By default, it displays a list of tables in all systems and environments. On this page, you can click a table name to navigate to a table and work on it. You can select a system in the Select System list and an environment in the Select environment list to view tables in a specific environment.

Table Details					
Select System All		Select Environment All			
#	System Name	Environment Name	Table Name	Logical Table Name	Table Definition
1	erwin DM	DM Staging	Claim	Claim	A claim is a statement listing services rendered, the dates of services, and itemization of
2	erwin DM	DM Staging	Date	Date	Topic providing analysis context at the day / date level
3	erwin DM	DM Staging	Member	Member	A member is an individual who is now or has been in the past associated with a Contract
4	erwin DM	DM Staging	Claims Analysis	Claims Analysis	This information package analyzes claims by time, member, and claim.

To focus on a list of sensitive tables only and view their details, on the **Tables** card, click **Sensitive**. The Table Details page appears. By default, it displays a list of sensitive tables in all environments. To view sensitive tables in a specific environment, you can use the Select System and Select Environment lists.

Columns

The Columns card displays the total number of columns and the number of sensitive columns. For example, the following Columns card displays that there are 15813 columns, out of which 50 are sensitive.

Columns	
Total	Sensitive
15813	50

You can drill down and view the list of columns. To view the list of columns, on the **Columns** card, click **Total**. The Column Details page appears. By default, it displays a list of columns in all tables. On this page, you can click a column name to navigate to a column and work on it. Also, you can select a system in the Select System list, select an environment in the Select Environment list, and select a table in the Select Table list to view columns in a specific table.

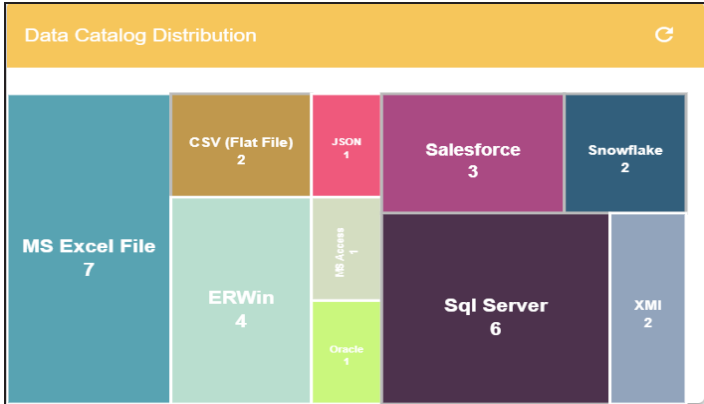

Column Details					
Select System All		Select Environment All		Select Table All	
#	System Name	Environment Name	Table Name	Column Name	Logical Column Name
	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
1	erwin DM	DM Landing	Employees	EmployeeName	EmployeeName
2	erwin DM	DM Landing	Employees	EmployeeID	EmployeeID
3	erwin DM	DM Landing	Citizens	CitizenID	CitizenID
4	erwin DM	DM Landing	Citizens	CitizenName	CitizenName

To focus on the list of sensitive columns and view their details, on the **Columns** card, click **Sensitive**. The Column Details page appears. By default, it displays a list of sensitive columns in all tables. To view sensitive columns in a specific table, you can use the Select System and Select Environment lists.

You can change the background color of the Enterprise Metadata section. To change the background color, click  and then, click **Background** to select a color from the palette.

Data Catalog Distribution

The Data Catalog Distribution card displays the number of environments based on database types. For example, the following Data Catalog Distribution card displays that there are seven CSV environments, four ERWin environments, six SQL Server environments, and so on.

You can drill down and view a list of environments belonging to a particular database type. For example, to view a list of SQL Server environments, click **Sql Server**. The Data Catalog Distribution page appears. On this page, you can click an environment name to navigate to an environment and work on it.

#	System Name	Environment Name	Database Type	Environment Type	DBMS Name	DBMS Schema Name	IP Address	Port	Sens
1	SQL System	Northwind	SqlServer	Northwind	Northwind	dbo	10.1.85.178	1433	
2	SQL System	SQL Env	SqlServer	SQL Env	DIS10	dbo	localhost	1433	
3	TALEND	STAGING	SqlServer	STAGING	MS Excel File	dbo	localhost	1433	
4	SQL System	TechPubs	SqlServer	Test	Northwind	DBO	localhost	1433	
5	SQLTechPubs	SQLTechPubs	SqlServer	Test	Northwind	DBO	localhost	1433	
6	erwin DM	Sql Server	SqlServer	Sql Server	Northwind	dbo	localhost	1433	

Top <Technical_Assets> in Data Lineage

The Top <Technical_Assets> chart card displays top technical assets based on the number of columns used in mappings. You can switch between the technical assets to view number of columns in systems or environments used in mappings. To switch between systems and environments, click . The available options appear. Click **Change Type** and then click the required technical asset.

For example, the following chart card displays top systems in data lineage. The SQL System on this chart card has 98 columns that are used in mappings.

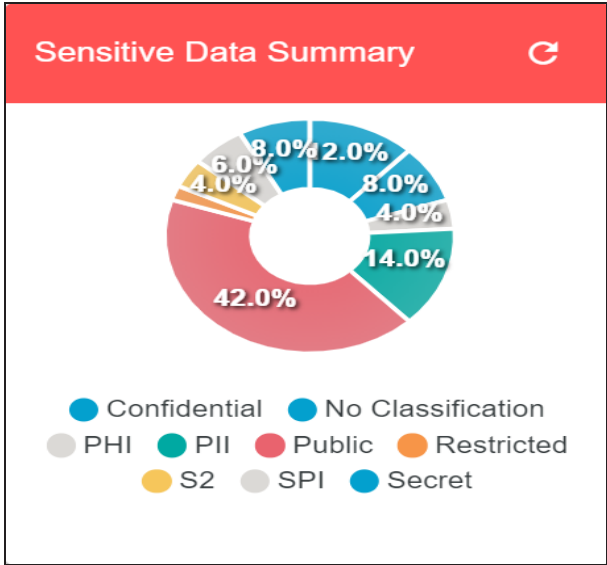

To control the number of records appearing on the chart card, click . The available options appear. Click **Records** and then, click the required number.

To view data lineage details of technical assets, on the chart card, click a bar graph. For example, the Top Systems in Data Lineage page appears on clicking a bar graph. On this page, you can click a system name to navigate to a system and work on it.

#	System Name	Environment Name	Project Name	Map Name	System Usage In Mappings	Database Type
1	SQL System	Northwind	Lineage Demo	TestMap3	22	SqlServer
2	SQL System	Northwind	DigitalAdoption	Flow Test	15	SqlServer
3	SQL System	SQL Env	erwinDIS	TechPubsBUGTrial	8	SqlServer
4	SQL System	Northwind	Lineage Demo	TestDataMap1	8	SqlServer
5	SQL System	Northwind	Lineage Demo	TestMap2	8	SqlServer

Sensitive Data Summary

The Sensitive Data Summary chart card displays the distribution of sensitive columns based on SDI classification across all systems in a donut chart. Each arc of the donut chart corresponds to an SDI classification. For example, the following donut chart displays that 42% of the columns are Public, 2% of the columns are confidential, and so on.

Hover over the donut chart to view the absolute number of columns belonging to an SDI classification. To view columns details, click an arc. The Summary of <SDI_Classification> page appears. On this page, you can click a column name to navigate to a column and work on it.

Summary Of [Public](#)

#	System Name	Environment Name	Table Name	Column Name
	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
1	Informatica	Informatica	dbo.BD_CM_CUSTCARD_ACCT_XREF	COD_ACCT_NO
2	Informatica	Informatica	dbo.BD_CM_CUSTCARD_ACCT_XREF	FLG_DEFAULT
3	Informatica	Informatica	dbo.BD_CM_CUSTCARD_ACCT_XREF	DAT_LINKED
4	Informatica	Informatica	dbo.BD_CM_CUSTCARD_ACCT_XREF	COD_CARD_NO
5	Oracle	TechPubs	APPQOSSYS.WLM_FEATURE_USAGE	STATS1
6	Oracle	TechPubs	APPQOSSYS.WLM_FEATURE_USAGE	FEATURE_INFO

Sensitive Data Distribution By <Technical_Assets>

The Sensitive Data Distribution By <Technical_Assets> chart card displays the number of sensitive columns and their SDI classification in a system or environment. To switch between systems and environments, click  and then, click the required technical asset. For example, the following card displays the number of sensitive columns and their classification in erwin DM, Informatica, Oracle, SAP, and other systems.

Each bar in the graph corresponds to a system or environment. You can drill down and view detailed information in the list format. To view detailed information about sensitive columns, click a bar. The Sensitive Data Distribution page appears. On this page, you can click a column name to navigate to a column and work on it.

Sensitive Data Distribution				
#	System Name	Environment Name	Table Name	Column Name
	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
1	SQL System	SQL Env	dbo.DimCurrency	CurrencyKey
2	SQL System	SQL Env	dbo.DimCurrency	CurrencyName
3	SQL System	SQL Env	dbo.DimCustomer	YearlyIncome
4	SQL System	SQL Env	dbo.DimOrganization	CurrencyKey
5	SQL System	SQL Env	dbo.FactCurrencyRate	CurrencyKey
6	SQL System	SQL Env	dbo.FactInternetSales	CurrencyKey

Top <Technical_Assets> By Associations

The Top <Technical_Assets> By Associations chart card displays the top technical assets based on the number of associations it has with other assets. You can switch between technical assets to view top systems, environments, tables, or columns based on the number of associations. To switch between technical assets, click . The available options appear. Click **Change Type** and then, click the required technical asset. For example, the following card displays top tables based on the number of associations.

To control the number of records appearing on the chart card, click . The available options appear. Click **Records** and then click the required number.

Each bar in the graph corresponds to a technical asset. Hover over a bar to view the number of associations.

Top <Technical_Assets>

The Top <Technical_Assets> chart card displays top systems or environments based on the number of tables and columns. To switch between systems and environments, click . The available options appear. Click **Change Type** and then, click the required technical asset. For example, the following chart card displays the top five systems.

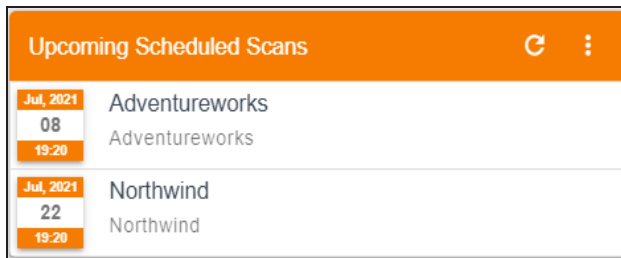

To control the number of records available on the chart, click . The available options appear. Click **Records** and then, click the required number.

Each pair of bars in the graph corresponds to a technical asset. Hover over green and orange bars to view the number of columns and tables respectively.

Upcoming Scheduled Scans

The Upcoming Scheduled Scans card displays a list of environments that are scheduled for a metadata scan. This list includes time of the scheduled scan for each environment. To control the number of records available on the chart, click . The available options appear. Click **Records** and then click the required number.

To customize the card background, click . The available options appear. Click **Background** and then use the color palette. For example, the following card's background color is set to orange color.

Upcoming Scheduled Scans	
Jul, 2021 08 19:20	Adventureworks Adventureworks
Jul, 2021 22 19:20	Northwind Northwind

Last Refreshed Environments

The Last Refreshed Environments card displays a list of recently refreshed environments. It displays the environment name, date, and time of the environment refresh. This helps in tracking environments that are recently updated. To control the number of records available on the chart, click . The available options appear. Click **Records** and then click the required number. For example, the following chart card displays a record of five environments

Last Refreshed Environments		🔄	⋮
Jan, 2021 21 05:56	CSV_erwin erwinHR		
Nov, 2020 06 00:00	MS Access Con 1 erwin_MS Access Con		
Nov, 2020 05 23:53	XMI R1 XMI		
Nov, 2020 05 23:46	JASON_HR erwinHR		
Oct, 2020 29 07:00	Sql Server erwin DM		

To customize the card background, click . The available options appear. Click **Background** and then use the color palette.

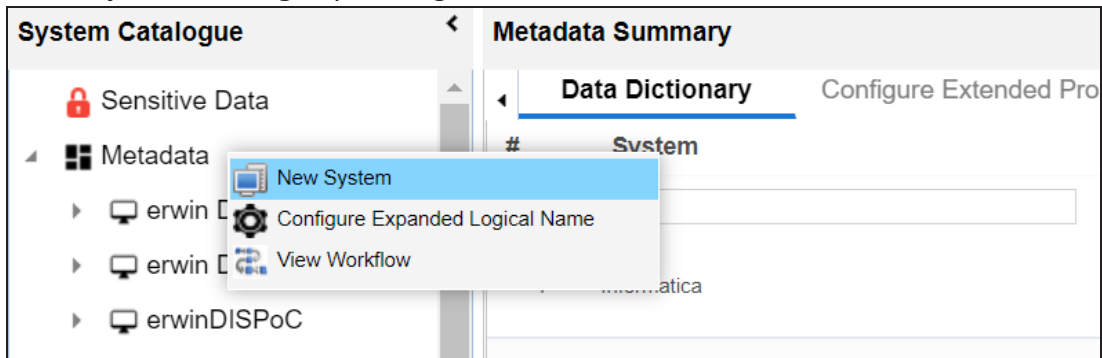

Creating Systems

You can harvest (scan) metadata from data sources in the Metadata Manager. The scanned metadata is stored in a hierarchical manner (System > Environment > Table > Column) in the System Catalogue.

A System can contain multiple environments and in a typical data integration project a system can be a source or target type. You can create a system and specify data steward, system owner, and its business purpose etc.

To create systems, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click the **Metadata** node.

3. Click **New System**.

The New System page appears.

The screenshot shows a 'New System' window with a 'System Details' tab. The interface includes a navigation bar with 'Next', 'Save & Exit', and 'Cancel' buttons. The 'System Details' section is divided into 'System Details' and 'Miscellaneous' sub-sections. The 'System Details' section contains the following fields:

- System Name* (text input)
- Data Steward (dropdown menu with '-Select Data Steward-')
- Business Purpose (rich text editor with a toolbar)
- Primary Move Type(Source/Target) (text input)
- DQ Score (dropdown menu with 'Select')

The 'Miscellaneous' section contains the following fields:

- Server Platform (text input)
- DBMS Platform (text input)
- File Management Type (text input)
- Owner Name (text input)
- Telephone Number (text input)
- Server OS Version (text input)
- DBMS Version (text input)
- File Location (text input)
- Release (text input)
- Email Address (text input)

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
System Name	Specifies the physical name of the system. For example, Enterprise Data Warehouse. For more information on naming conventions, refer to the Best Practices section.
Data Steward	Specifies the name of the data steward responsible for the system. For example, Jane Doe. Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager. To assign data steward, select a data steward from the drop down options.
Business Purpose	Specifies the business objective of the system. For example: This is a source system to store Sales metadata of the organization for a data integration project.

Field Name	Description
Server Platform	Specifies the server platform of the system. For example, Windows.
DBMS Platform	Specifies the DBMS platform of the system (if the system is an RDBMS source). For example, SQL Server.
File Management Type	Specifies the file management system (if the system is a file-based source). For example, MS Excel.
Owner Name	Specifies the full name of the system owner. For example, Talon Smith.
Telephone Number	Specifies the telephone number of the system owner. For example, 1-800-783-7946.
Primary Move Type (Source/Target)	Specifies whether the system is source, target, or both. Valid values are: <ul style="list-style-type: none"> ▪ Source ▪ Target ▪ Both
DQ Score	Specifies the overall data quality score of the system. For example, High (7-8). For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.
Server OS version	Specifies the OS version of the system's server. For example, Windows Server 2012 R2.
DBMS Version	Specifies the DBMS version of the system (if the system is an RDBMS source). For example, SQL Server 2017.
File Location	Specifies a file path (if the system is a file-based source). For example, C:\Users\Talon Smith\erwin\Mike - Target System
Release	Specifies the system release including the point release number.

Field Name	Description
	For example, Oracle 18c.
Email Address	Specifies the system owner's email address. For example, talon.smith@mauris.edu

5. Click the **Miscellaneous** tab and enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
ESB Platform Type	Specifies the enterprise platform bus type (if the system is an ESB source). For example, Mule.
ESB Q Manager Name	Specifies the ESB queue manager's name of the system (if the source is an ESB). For example, John Doe.
Total DBSize	Specifies the total physical size of the database. For example, 198 GB.
Total Number of Tables	Specifies the total number of tables associated with the system. For example, 300.
Definition of the day	Specifies the definition of the system at the end of the day. For example: Extraction of details from the source system is complete.
Batch Extract Window	Specifies the daily batch extract window of the system. For example: Batch extract from the source system is scheduled at 3:30 P.M. everyday.
Average User	Specifies the average number of system users. For example, 30.
Average Concurrent Users	Specifies the average number of concurrent system users. For example, 15.
Sensitive Data Indicator (SDI) Flag	Specifies whether the system is sensitive. Switch Sensitive Data Indicator (SDI) Flag to  to mark the system sensitive.

Field Name	Description
Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the system. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . For more information on configuring SDI classifications, refer to the Configuring Sensitivity Classifications topic.
Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . The field autopopulates based on the SDI Classification.
Special Instructions	Specifies any special instructions or comments about the system. For example: The system acts as a source for creating the mapping specification.

6. Click **Save and Exit**.

A new system is created and added under the system tree.

Once the system is created, you can [create environments](#) and scan metadata from different database types.

You can enrich the system further by:

- [Adding Documents](#)
- [Viewing Workflow Logs](#)
- [Associating Systems](#)
- [Configuring Expanded Logical Name of Tables/Columns](#)

You can manage a system as per your requirements. [Managing systems](#) involves:

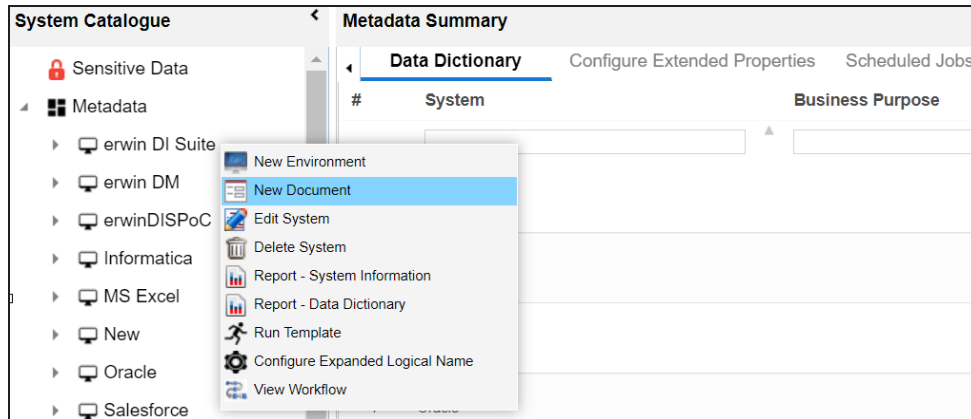

- Editing or deleting systems
- Exporting systems information

Adding Documents

You can add supporting documents, such as text files, audio files, video files, document links, and so on to a system.

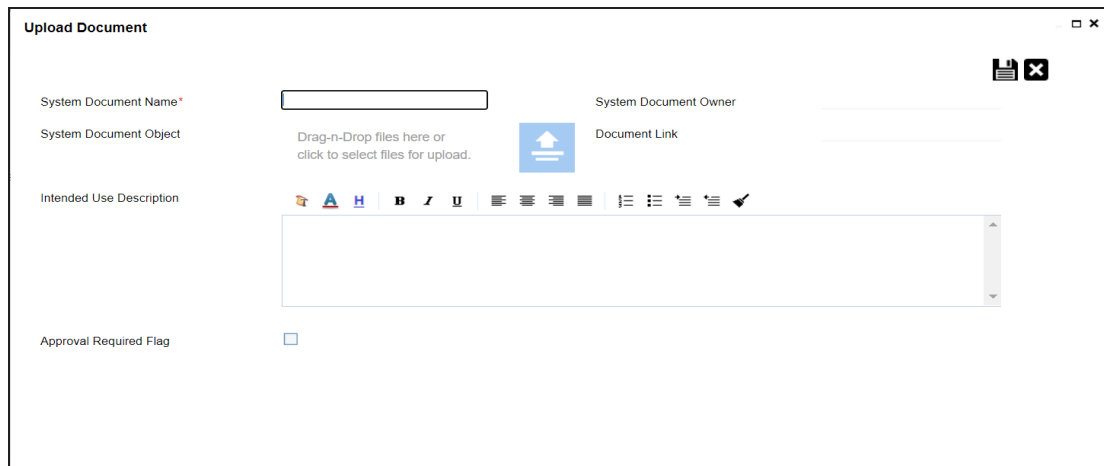

To add documents to systems, follow these steps:

1. In the **System Catalogue** pane, right-click a system.

2. Click **New Document**.

The Upload Document page appears.

A screenshot of the 'Upload Document' page. The page has a title bar with 'Upload Document' and window control icons. It contains several form fields: 'System Document Name*' (a text input field), 'System Document Object' (a text input field with a blue upload icon and the text 'Drag-n-Drop files here or click to select files for upload.'), 'Intended Use Description' (a rich text editor with a toolbar), and 'Approval Required Flag' (a checkbox). On the right side, there are fields for 'System Document Owner' and 'Document Link'. A close button (X) is in the top right corner.

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
System Document Name	Specifies the name of the physical document being attached to the system. For example, Source System Details.
System Document Object	Drag and drop document files or use  to select and upload document files.
System Document Owner	Specifies the document owner's name. For example, John Doe.
Document Link	Specifies the URL of the document. For example, https://drive.google.com/file/d/12sC2_SZlyeFKI7OOn-b5YkMBq4ptA7jhg5/view
Intended Use Description	Specifies the intended use of the document. For example: The document is to keep a record of system description and its data dictionary.
Approval Required Flag	Specifies whether the document requires approval. Select the Approval Required Flag check box to select the document status.
Document Status	Specifies the status of the document. For example, In Progress.  This field is available only when the Approval Required Flag check box is selected.

4. Click .

The document is saved on the System Documents tab.

Self Help

Once a supporting document is added, use the following options:

Preview ()

Use this option to preview the document.

Edit ()

Use this option to update the document details.

Delete ()

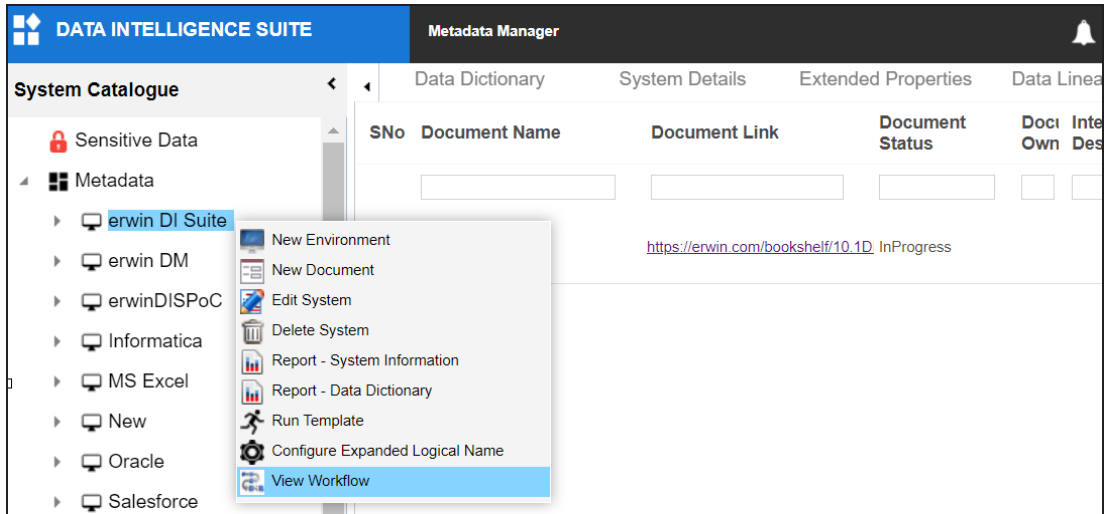

Use this option to delete the document that is not required.

Viewing Workflow Logs

You can view workflow logs and know the current stage of systems. A workflow assigned to a system is applicable to all the environments under it. For more information on managing metadata manager workflows, refer to the [Managing Metadata Manager Workflows](#) section.

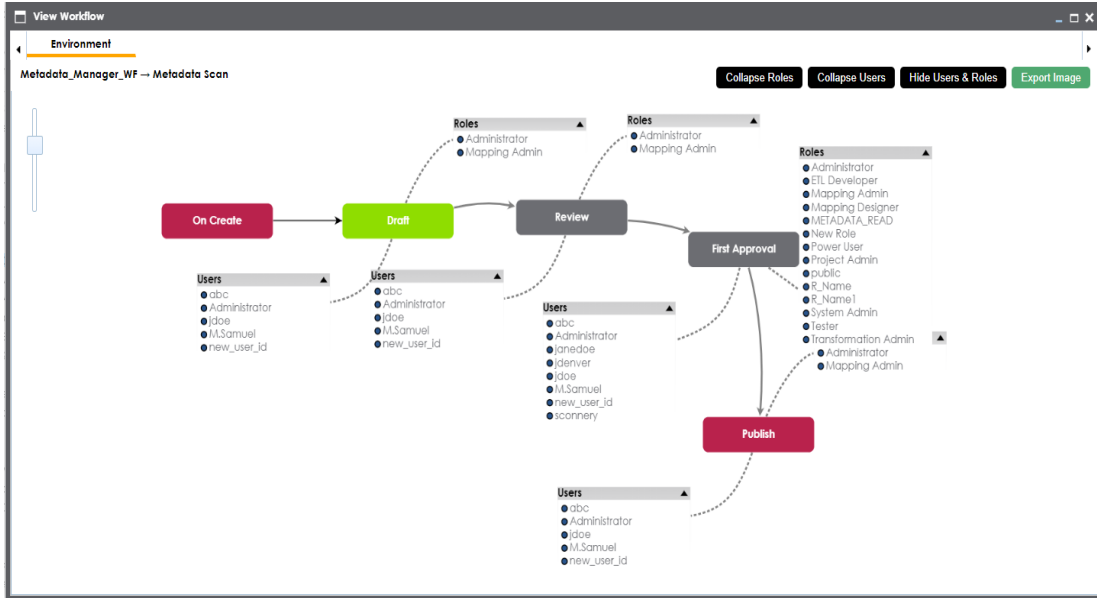

To view workflow logs of systems, follow these steps:

1. In the **System Catalogue** pane, right-click a system.

2. Click **View Workflow**.

The View Workflow page appears. It displays the current stage of the system.

Use the following options to work on the workflow:

User Comments (🗨️)

Use this option to view users and the comments entered by the users in each stage.

Expand/Hide Users and Roles

Use this option to view or hide users and roles assigned to the stages of the workflow.

Collapse/Expand Roles

This option is enabled when you are in the Expand Users and Roles view. Use this to switch between the collapsed and expanded roles view.

Collapse/Expand Users

This option is enabled when you are in the Expand Users and Roles view. Use this to switch between the collapsed and expanded users view.

Export Image

Use this option to download the workflow in the JPG format.

Associating Systems

You can associate systems with business assets, systems, environments, tables, and columns. You can view these associations on mind maps and analyze association statistics.

Ensure that:

- Business assets are enabled. You can add custom business assets and enable them in the [Business Glossary Manager Settings](#).
- Relationship between system and the asset type is defined. You can define associations and relationships in the [Business Glossary Manager Settings](#).

To associate systems with asset types, follow these steps:

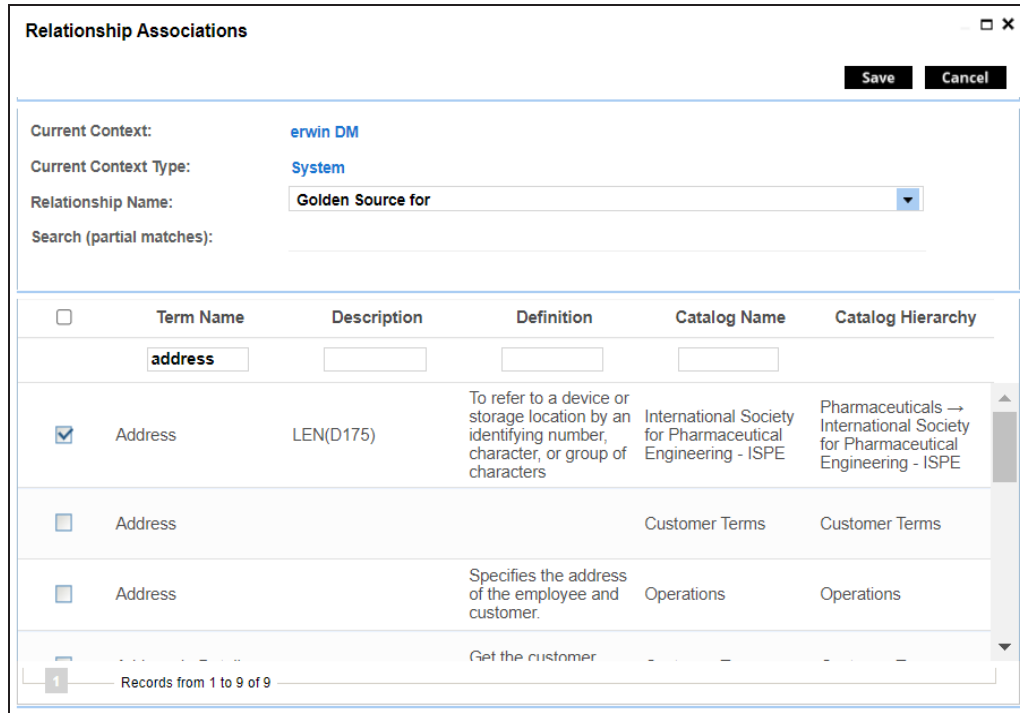

1. In the **System Catalogue** pane, click the required system.
2. In the central pane, click the **Associations** tab.
3. In the asset type (business policies, business terms, columns, environments, and tables) list, select an asset type to associate with the system.

4. Click **+**.

The Relationship Association page appears. Based on the asset type that you select, it

displays a list of available assets.

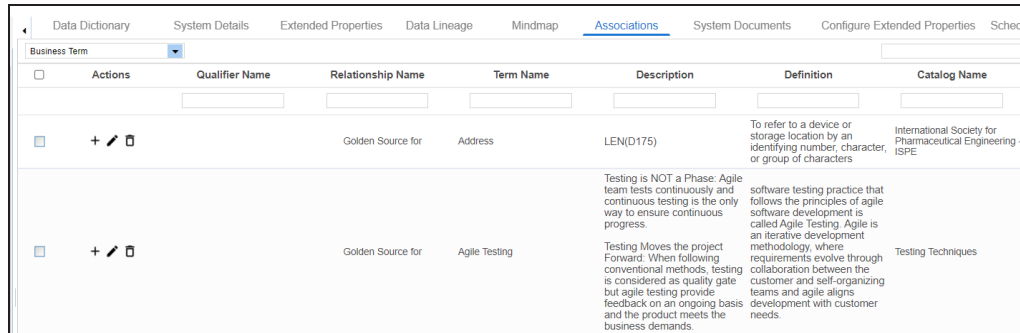

5. Select **Relationship Name**, and the asset type.

If you know the term name, use the Search (partial matches) field to look up for it.

6. Click **Save**.

The asset is associated to the system and added to the list of associations.

You can define as many associations as required.

Once you have created associations, you can use the following options under the **Actions** column:

Add Association (+)

Use this option to add associations using a qualifier.

Edit Association (✎)

Use this option to edit the association.

Delete Association (🗑)

Use this option to delete the association.

To view mind map, click the **Mindmap** tab. For more information on mind maps, refer to the [Viewing Mind Maps](#) topic.

You can associate multiple assets with a system, and view the associations based on a qualifier view in the mind map. For more information, refer to the [Setting Up Associations Using Qualifiers](#) topic.

Configuring Expanded Logical Name

You can update the expanded logical name for multiple tables/columns by scheduling a configuration job. The job updates the expanded logical name based on the table/column name, associated business term's name, and the associated business term's definition.

You should configure expanded logical name of tables and columns after scanning metadata.

You can run the job at both, system and environment levels:

- **System level:** The expanded logical name can be applied to all the tables and columns under the system. This includes all the environments under the system.
- **Environment level:** The expanded logical name can be applied to all the tables and columns under the environment.

For example, consider a scenario where you want to schedule a job to configure the expanded logical name of a table, RM_Resource and a column, Resource_ID. The parameters of the job are a business term catalog that has a business term, Resource, its definition, Sales Representative, and a splitter, Underscore (_). Refer to the following table to understand the parameters and their values:

Entity	Value	Comment
Splitter (specified while scheduling the job)	_(Underscore)	
Table Name	RM_Resource	Here, the part after the underscore (splitter), Resource, matches the Business Term. Therefore, it will be replaced with the business term definition and the part before the underscore, RM, will be retained in the expanded logical name.
Column Name	Resource_ID	Here, the part before the underscore, Resource, matches with the Business Term. Therefore, it will be replaced with the business term definition and the part after the underscore, ID will be retained in the expanded logical name.

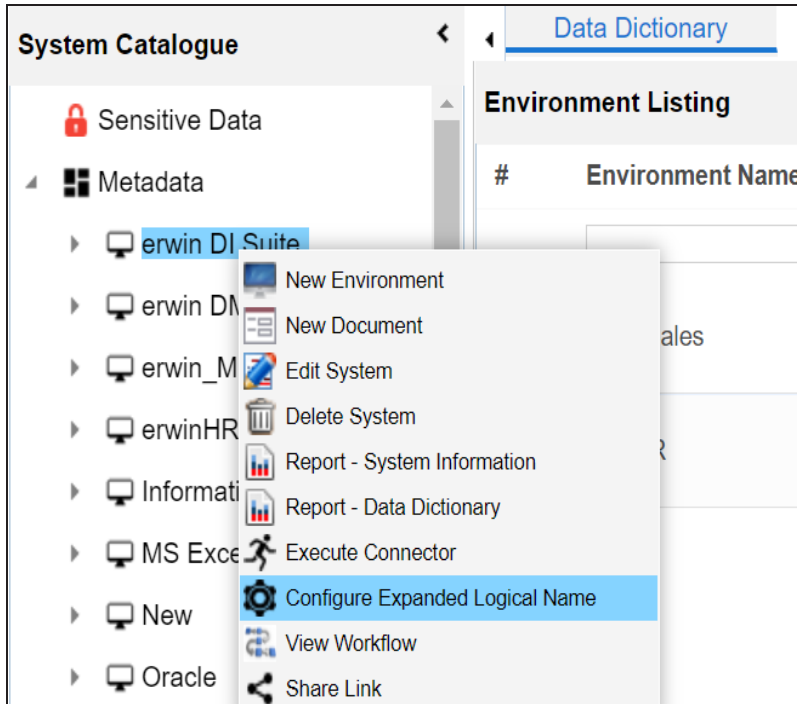

Entity	Value	Comment
Business Term	Resource	This should match with a part of the table and column names above.
Business Term Definition	Sales Representative	In the updated expanded logical name, this will replace the part of the table/column name that matches the business term name. That is: <ul style="list-style-type: none"> ▪ For the table, RM will be retained and Resource will be replaced with Sales Representative. ▪ For the column, ID will be retained and Resource will be replaced with Sales Representative.
Expanded Logical Name	<Blank>	Expanded logical name is formed from the business term definition and part of table or column names.

After the job runs successfully, the expanded logical name of the table and column is updated as mentioned in the following table:

Entity	Expanded Logical Name	Comment
Table	RM Sales Representative	Here, RM retained from the table name and Sales Representative is added from business term definition.
Column	Sales Representative ID	Here, ID is retained from the column name and Sales Representative is added from business term definition.

To configure expanded logical name, follow these steps:

1. In the **System Catalogue** pane, right-click a system or environment.
The available options appear.

2. Click **Configure Expanded Logical Name**.

The Configure Expanded Logical Name page appears.

3. Select or enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Catalogs	Select the catalog containing the required business term.
Splitter	Select appropriate splitter based on the table name or column name.
ELN Scope	Select an appropriate scope of the job. <ul style="list-style-type: none"> ▪ Columns: Indicates that the expanded logical names of all the columns in this system are configured ▪ Tables: Indicates that the expanded logical name of all the tables

Field Name	Description
	<p>in this system are configured</p> <ul style="list-style-type: none"> ▪ Both: Indicates that the expanded logical names of all the tables and columns in this system are configured
Job Name	A default job name is autopopulated. You can modify it and enter a job name.
Interval	Select an interval of the job. Interval sets the frequency of the job. For example: If you set the interval every week then the job will be executed every week.
Local or Server	<p>Select the machine whose clock decides the time of the scheduled scan.</p> <ul style="list-style-type: none"> ▪ Local: Refers to your local machine. ▪ Server: Refers to the machine where erwinDIS has been deployed.
Schedule Job On	Select date and time of the execution of the job.
Notify Me	Turn the Notify Me to ON to receive a notification email about the scheduled job.
Notification Email	This field is autopopulated with your email ID. You receive email notifications about the scheduled job from the Admin Email ID, configured in the Email Settings. For more information on configuring Admin Email ID, refer to the Configuring Email Settings topic.
CC List	Enter a comma-separated list of email IDs that should receive the job notification.

4. Click .

The job is scheduled and added to the Scheduled Jobs list on the **Scheduled Jobs** tab.

Dashboard [Explore](#) ⚙️

Managing Systems

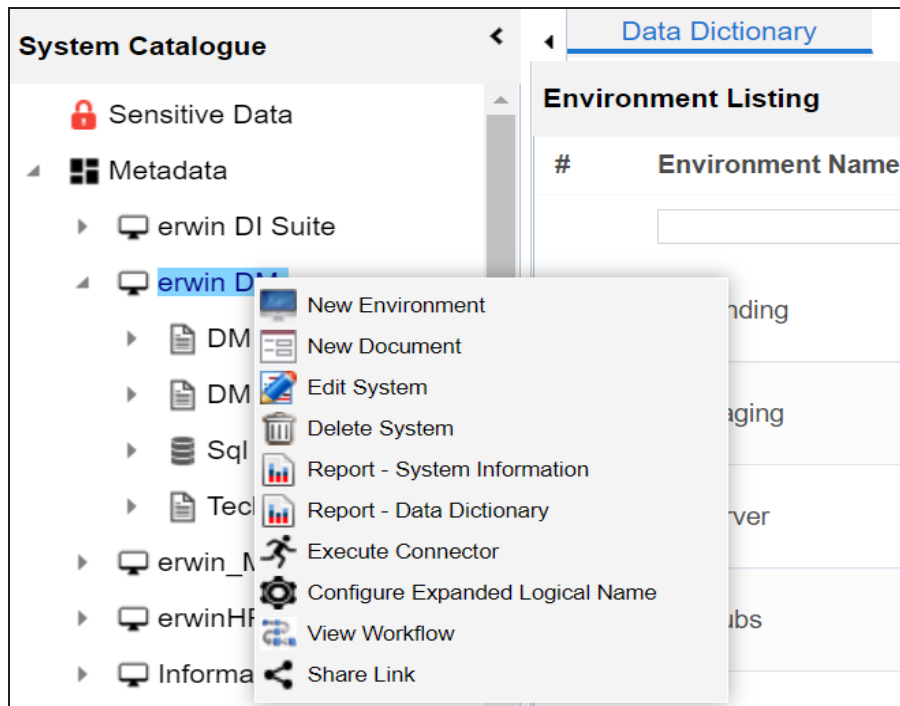

Managing systems involves:

- Editing or deleting systems
- Exporting systems information
- Exporting data dictionary report
- Sharing a shortcut link

To manage systems, follow these steps:

1. In the **System Catalogue** pane, right-click a system.

The available options appear.

2. Use the following options:

Edit System

Use this option to edit the system details.

Delete System

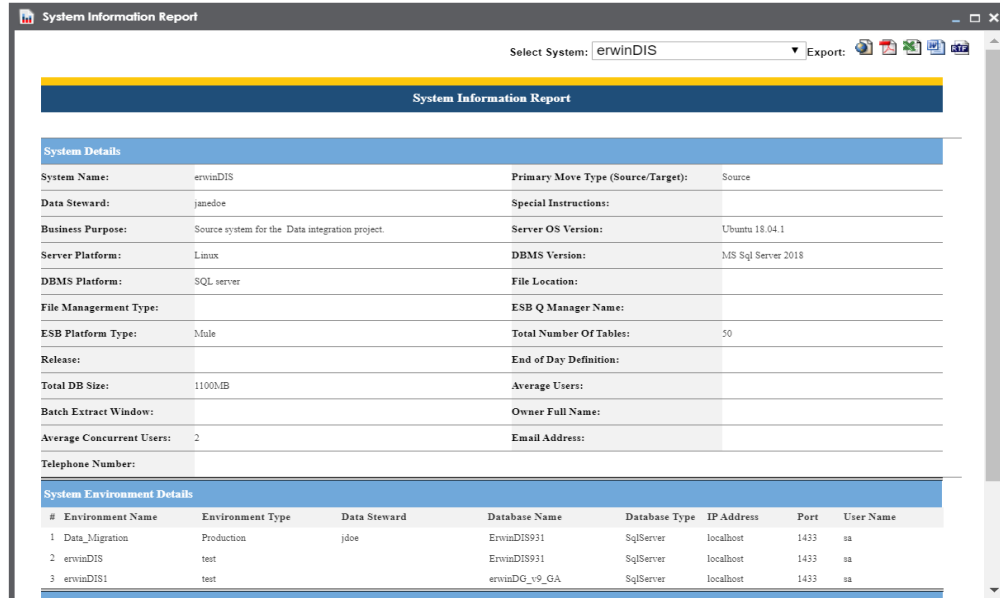

Use this option to delete systems that are not required. Ensure that you delete all the environments under a system before deleting it.

Report - System Information

Use this option to view and export system information.

To view system information report, click **Report - System Information**.

The System Information Report page appears.

The screenshot shows a web application window titled "System Information Report". At the top, there is a "Select System:" dropdown menu with "erwinDIS" selected, and an "Export:" button with icons for HTML, PDF, Excel, and Word. Below this is a blue header bar with the text "System Information Report".

The main content area is divided into two sections:

System Details

System Name:	erwinDIS	Primary Move Type (Source/Target):	Source
Data Steward:	jandoe	Special Instructions:	
Business Purpose:	Source system for the Data integration project.	Server OS Version:	Ubuntu 18.04.1
Server Platform:	Linux	DBMS Version:	MS Sql Server 2018
DBMS Platform:	SQL server	File Location:	
File Management Type:		ESB Q Manager Name:	
ESB Platform Type:	Mule	Total Number Of Tables:	50

2	erwinDIS	test		ErwinDIS931	SqlServer	localhost	1433	sa
3	erwinDIS1	test		erwinDG_v9_GA	SqlServer	localhost	1433	sa

In the **Select System** list, select a system to view its report.

- **Export to HTML** (

51

- **Export to RTF** (

Report - Data Dictionary

Use this option to view and export system catalog and data dictionary report.

Share Link

Use this option to share a shortcut link of a system.

- **Copy Link:** Use this option to copy the shortcut link to the system. You can then share this link manually.
- **Email:** Use this option to share the shortcut link to the system via an email.

Creating and Managing Environments

Metadata is stored and categorized into systems and environments. Multiple environments are contained in a system. Whereas environments can denote a database, flat file, data models, etc. Environments contain database objects like Tables, Columns, Views, Synonyms, etc.

You can create environments under a system and scan metadata from a data source by providing connection parameters in the environment.

Creating and managing environments involves:

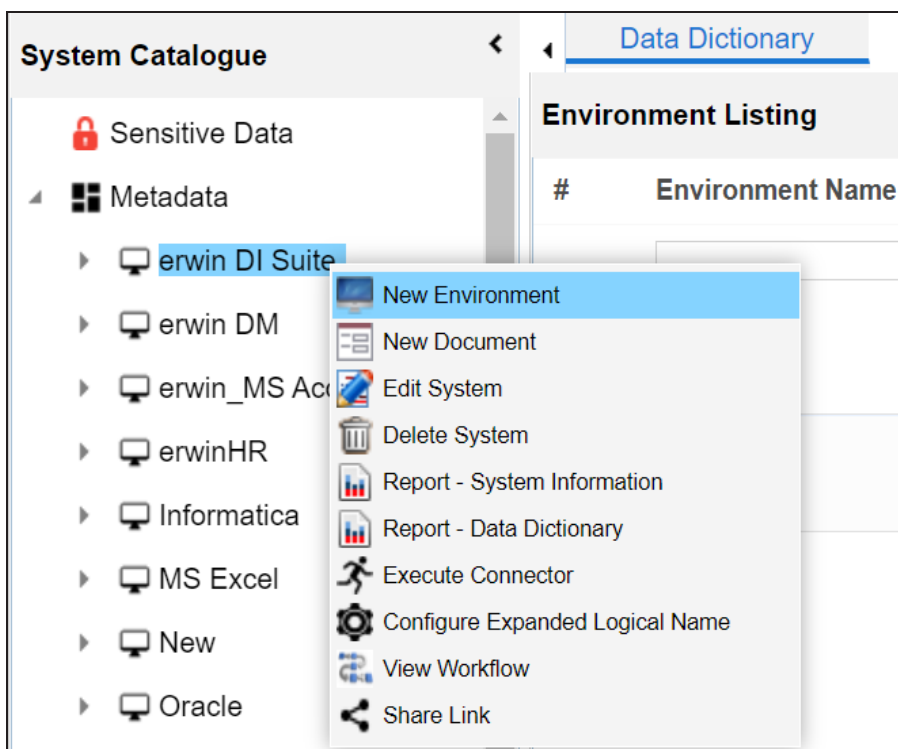

- [Creating environments](#)
- [Assigning roles and users](#)
- [Managing environments](#)
- [Updating Sensitivity](#)
- [Viewing Sensitive Data Dashboard](#)
- [Uploading documents](#)
- [Cloning environments](#)
- [Viewing ER diagrams](#)
- [Viewing workflow logs](#)
- [Associating Environments](#)
- [Configuring Business Properties](#)
- [Configuring Expanded Logical Name of Tables/Columns](#)

Creating Environments

After creating a system in the Metadata Manager, you can create environments under the system. An environment can be created for different database types and flat files by fulfilling prerequisites and providing the connection parameters.

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click a system.

The available options appear.

3. Click **New Environment**.

The New Environment page appears.

New Environment

Configuration Details
Miscellaneous

System Environment Name*	<input type="text"/>	<h2>Please Select Database Type</h2>
System Environment Type	<input type="text"/>	
Data Steward	-Select Data Steward- ▼	
	<input type="checkbox"/> <i>Apply To All Tables & Columns</i>	
Server Platform	<input type="text"/>	
Server OS Version	<input type="text"/>	
File Management Type	<input type="text"/>	
File Location	<input type="text"/>	
Production System Name	Choose Production System ▼	
Production Environment Name	<input type="text"/> ▼	
Version	1.00 <input type="text"/>	
Version Label	<input type="text"/>	
DQ Score	-Select DQ Score- ▼	
Datasource Type*	-Select Database- ▼	

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
System Environment Name	<p>Specifies the unique name of the environment. For example, EDW-Test.</p> <p>The following special characters are supported in an environment name:</p> <ul style="list-style-type: none"> ▪ - (hyphen) ▪ ((opening parenthesis) ▪) (closing parenthesis) ▪ / (slash) <p>For more information on naming conventions, refer to the Best Practices section.</p>

Field Name	Description
System Environment Type	<p>Specifies the type of the environment.</p> <p>For example, development, test, or production.</p>
Data Steward	<p>Specifies the name of the data steward responsible for the environment.</p> <p>For example, Jane Doe.</p> <p>Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager.</p> <p>To assign data steward, select a data steward from the drop down options..</p>
Server Platform	<p>Specifies the server platform of the environment.</p> <p>For example, Windows.</p>
Server OS Version	<p>Specifies the OS version of the environment's server.</p> <p>For example, Windows Server 2012 R2.</p>
File Management Type	<p>Specifies the file management system (if the environment is a file-based source).</p> <p>For example, MS Excel.</p>
File Location	<p>Specifies a file path (if the environment is a file-based source).</p> <p>For example, C:\Users\Jane Doe\erwin\Mike - Target System</p>
Production System Name	<p>Specifies the system name being associated with the environment as the production system.</p> <p>For example, Enterprise Data Warehouse.</p>
Production Environment Name	<p>Specifies the environment name being associated with the environment as the production environment.</p> <p>For example, EDW-PRD.</p>
Version Label	<p>Specifies the version label of the environment to track change history.</p> <p>For example, Alpha.</p> <p>For more information on configuring version display, refer to the Configuring Version Display of the Environments topic.</p>

Field Name	Description
DQ Score	Specifies the overall data quality score of the environment. For example, High (7-8). For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.
Database Type	Specifies the database type. For example, Sql Server. Select the type of database from where you wish to scan metadata. Depending upon your choice of database type you need to provide additional fields (connection parameters) appearing on the right hand side. <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 5px; display: inline-block;">  There are no additional fields for MS Excel File, and XSD. </div>

5. Click  to test the connection.

If the connection with database is established successfully then a success message pops up.

6. Click the **Miscellaneous** tab and enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Sensitive Data Indicator (SDI) Flag	Specifies whether the environment is sensitive.
Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the environment. For example, PHI. This list is enabled when the Sensitive Data Indicator (SDI) Flag is switched to  . For more information on configuring SDI classifications, refer to the Configuring Sensitivity Classifications topic.
Sensitive Data	Specifies the description of the SDI Classification.

Field Name	Description
Indicator (SDI) Description	For example: Protected Health Information. It is enabled when the Sensitive Data Indicator (SDI) Flag is switched to  . The field autopopulates based on the SDI Classification.
Intended Use Description	Specifies the description about the objective of the environment. For example: The environment contains the source metadata for the data integration project.
Environments Notes	Specifies relevant notes about the environment. For example: The environment uses Sql Server as database to scan the metadata.
Approval Instructions	Specifies any instructions for the environment's approval. For example: The environment must contain 50 tables from erwinDIS database.

7. Click **Save and Exit**.

A new environment is created and stored in the environment tree.

Once an environment is created, you can scan source or target metadata from the database type.

Different database types have different prerequisites and connection parameters:

- [SQL Server - via SQL or Window authentication mode](#)
- [Oracle and Oracle RAC](#)
- [MySQL](#)
- [Snowflake](#)
- [MS Dynamics CRM](#)
- [SAP ECC R/3 and IS-U Metadata via JCO Driver](#)

SQL Server

You can create two types of SQL Server environments:

- SQL authentication
- Windows authentication

Both the environments have same:

- Prerequisites
- Privileges
- JDBC driver details
- TLS connection details

There is a small difference between the two modes in JDBC connection parameters.

Prerequisites

Pre-requisite steps for establishing successful connection:

1. Creation of dedicated service account for erwin with Metadata Read-only privileges in SQL Server Database
2. Firewall connection open between SQL Server and erwin DI Suite application server
3. Opening of SQL Server database port to accept connections from erwin DI Suite application server

Privileges

Following are the privileges given to service account for:

- **Metadata scanning:** Grant view definition on Schema
- **Data preview:** Db_datareader

JDBC Driver Details

SQL Server JDBC driver is out of box packaged with erwin DI Suite application. Hence, no JDBC driver configuration is required from end user standpoint.

TLS Connection Details

- The SQL Server JDBC driver supports connection via TLS 1.2.
- The TLS protocol parameter needs to be added to JDBC URL string to ensure that the connection is via TLS. Otherwise, the source database will reject any incoming request in non-TLS mode.
- JDBC URL being used to connect via TLS:
`jdbc:sqlserver://SERVER_NAME:PORT#;data-baseName=AdventureWorks;sslProtocol=TLSv1.2`
- Additional parameters to configure (if needed):
`integratedSecurity=true;encrypt=true;trustServerCertificate=true;`

JDBC Connection Parameters

To enter SQL Server (SQL authentication) connection parameters, follow these steps:

1. Select the **Database Type** as **SqlServer** while creating the environment.

The screenshot shows the 'Configuration Details' section of a form. The 'Database Type*' dropdown menu is open, displaying a list of database options. 'SqlServer' is highlighted in blue. Other options include MS Excel File, CSV (Flat File), XMI, MS Access File, ERwin, ERwin 9, CWM XMI (v1.1), XSD, JSON, Db2, MySQL, IBM Netezza, Oracle, Greenplum, Pervasive, SAP, Sql Server (Windows Authentication), Sybase, Salesforce, Snowflake, Teradata, Amazon Redshift, HP Vertica, Big Data - Cloudera, Big Data - Hortonworks, Big Data - MapR, and Other. A note at the bottom left states: 'Note : If you change database type you changed database type.'

When you select database type as Sql Server, the following connection parameters appear on the right hand side.

The screenshot shows the connection parameters form for a SQL Server database. The fields are as follows:

- Driver Name*: com.microsoft.sqlserver.jdbc.SQLServerDriver
- DBMS Name/DSN*: ErwinDIS931
- IP Address/Host Name*: localhost
- Port: 1433
- User Name*: sa
- Password*: [masked]
- Save Password
- Url*: jdbc:sqlserver://localhost:1433;data...
- DBMS Instance Schema: DBO
- Connection Pool Type*: HIKARICP
- Number of Partitions*: 2
- Minimum Connections Per Partitions*: 3
- Maximum Connections Per Partitions*: 5
- Options: [empty]

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
Driver Name	Specifies the JDBC driver name for connecting to the database. For example, com.microsoft.sqlserver.jdbc.SQLServerDriver
DBMS Name/DSN	Specifies the SQL Server database name being used to connect to the environment. For example, ErwinDIS931.
IP Address/Host Name	Specifies the IP address or server host name of the database. For example, localhost.
Port	Specifies the port to connect with the database. 1433 is the default port for a Sql Server database type. You can change it, if required.
User Name	Specifies the SQL Server (Service Account) user name. For example, sa.
Password	Specifies the SQL Server (Service Account) password. For example, goerwin@1.
URL	Specifies the full JDBC URL that is used to establish a connection with the database. For example, jdbc:sqlserver://SERVER_NAME:PORT#;databaseName=DatabaseName It is autopopulated based on the other parameters.
DBMS Schema	Specifies the schema of the database. Use this option to select multiple or narrow down to single schema. For example, DBO.
Connection Pool Type	Specifies the connection pool type being used to connect via JDBC. For example, HIKARICP and BONECP.
Number of Partitions	Specifies the number of partitions of the database. It is autopopulated with default number of partitions. You can edit

Field Name	Description
	and provide the number of partitions as required. For example, 2.
Minimum Connections Per Partitions	Specifies the minimum connections per partitions of the database. It is autopopulated with default minimum connections per partitions. You can edit and provide the minimum connections per partitions as required. For example, 3.
Maximum Connections Per Partitions	Specifies the maximum connections per partitions of the database. It is autopopulated with default maximum connections per partitions. You can edit and provide the maximum connections per partitions as required. For example, 5.

To use database options, click .

The Database Options page appears. It displays the available database options.

Select keys and double-click the cells under the **Value** column to set the values of the keys. Use  to save the database options.

To enter SQL Server (Window authentication) connection parameters, follow these steps:

1. Select the **Database Type as Sql Server (Windows Authentication)**.

The screenshot shows a configuration window with two panes: 'Configuration Details' on the left and 'Miscellaneous' on the right. The 'Database Type*' field in the 'Configuration Details' pane is selected, and a dropdown menu is open in the 'Miscellaneous' pane. The dropdown menu lists various database types, with 'Sql Server (Windows Authentication)' highlighted in blue. A note at the bottom left of the 'Miscellaneous' pane reads: 'Note : If you change database type you changed database type.'

Configuration Details	Miscellaneous
Status	
System Environment Name*	Integration
System Environment Type*	Production
Data Steward	
Server Platform	MS Excel File
Server OS Version	CSV (Flat File)
File Management Type	XMI
File Location	MS Access File
Production System Name	ERwin
Production Environment Name	ERwin 9
Version	CWM XMI (v1.1)
Version Label	XSD
DQ Score	JSON
Database Type*	Db2
	MySql
	IBM Netezza
	Oracle
	Greenplum
	Pervasive
	SAP
	SqlServer
	Sql Server (Windows Authentication)
	Sybase
	Salesforce
	Snowflake
	Teradata
	Amazon Redshift
	HP Vertica
	Big Data - Cloudera
	Big Data - Hortonworks
	Big Data - MapR
	Other

When you select database type as **Sql Server (Windows Authentication)**, the following connection parameters appear on the right hand side.

The screenshot shows a configuration window with various connection parameters for a SQL Server instance. The parameters are as follows:

Driver Name*	net.sourceforge.jtds.jdbc.Driver
DBMS Name/DSN*	ErwinDIS931
IP Address/Host Name*	localhost
Domain	
User Name*	sa
Password*	••••••••
	<input checked="" type="checkbox"/> Save Password
Uri*	jdbc:jtds:sqlserver://localhost/ErwinDI!
DBMS Instance Schema	DBO
Connection Pool Type*	HIKARICP
Number of Partitions*	2
Minimum Connections Per Partitions*	3
Maximum Connections Per Partitions*	5
Options	

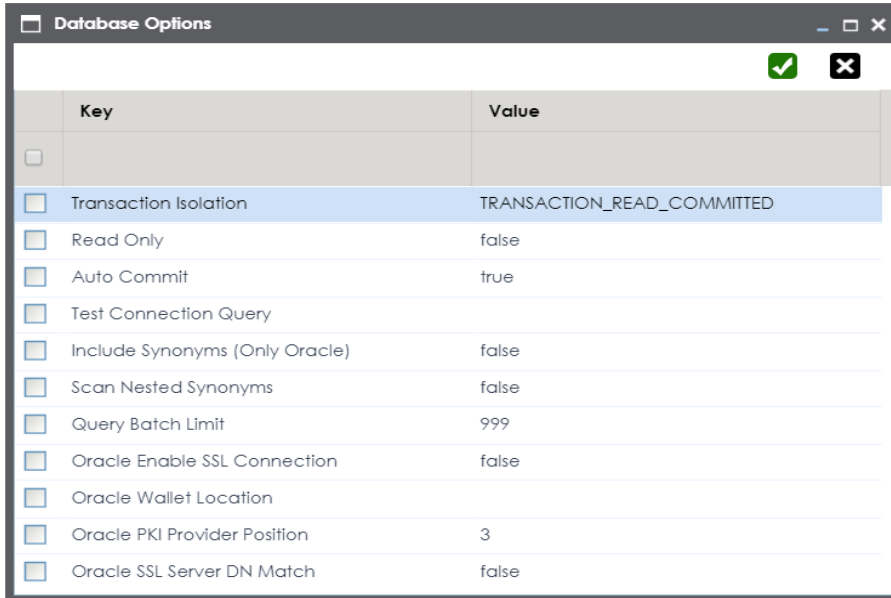

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
Driver Name	Specifies the JDBC driver name for connecting to the database. For example, com.microsoft.sqlserver.jdbc.SQLServerDriver
DBMS Name/DSN	Specifies the SQL Server database name being used to connect to the environment. For example, ErwinDIS931.
IP Address/Host Name	Specifies the IP address or server host name of the database. For example, localhost.
Domain	Specifies the network domain name on which database resides. For example, U-DOM1.
Port	Specifies the port to connect with the database. 1433 is the default port for a Sql Server database type. You can change it, if required.
User Name	Specifies the SQL Server (Service Account) user name. For example, sa.
Password	Specifies the SQL Server (Service Account) password. For example, goerwin@1.
URL	Specifies the full JDBC URL that is used to establish a connection to the database. It is autopopulated based on the other parameters. jdbc:jtds:sqlserver://SERVER_NAME:PORT#;data-baseName=DatabaseName;domain=DomainName;useNTLMv2=true;
DBMS Schema	Specifies the schema for the database. Use this option to select multiple or narrow down to single schema. For example, DBO.
Con-	Specifies the connection pool type being used to connect via JDBC.

Field Name	Description
Connection Pool Type	For example, HIKARICP and BONECP.
Number of Partitions	Specifies the number of partitions for the database. It is autopopulated with default number of partitions. You can edit and provide the number of partitions as required. For example, 2.
Minimum Connections Per Partitions	Specifies the minimum connections per partitions for the database. It is autopopulated with default minimum connections per partitions. You can edit and provide the minimum connections per partitions as required. For example, 3.
Maximum Connections Per Partitions	Specifies the maximum connections per partitions for the database. It is autopopulated with default maximum connections per partitions. You can edit and provide the maximum connections per partitions as required. For example, 5.

To use database options, click .

The Database Options page appears. It displays the available database options.

	Key	Value
<input type="checkbox"/>		
<input type="checkbox"/>	Transaction Isolation	TRANSACTION_READ_COMMITTED
<input type="checkbox"/>	Read Only	false
<input type="checkbox"/>	Auto Commit	true
<input type="checkbox"/>	Test Connection Query	
<input type="checkbox"/>	Include Synonyms (Only Oracle)	false
<input type="checkbox"/>	Scan Nested Synonyms	false
<input type="checkbox"/>	Query Batch Limit	999
<input type="checkbox"/>	Oracle Enable SSL Connection	false
<input type="checkbox"/>	Oracle Wallet Location

<input type="checkbox"/>	Oracle SSL Server DN Match	false

Select keys and double-click the cells under the **Value** column to set the values of the keys. Use  to save the database options.

Oracle

You can create Oracle environments and can also enable RAC/Service to:

- Use Oracle cluster database
- Capture Oracle Service name in DSN field

Before creating an Oracle environment, you should take a note of the following:

- Prerequisites
- JDBC driver details
- TLS connection details
- JDBC connection parameters

Prerequisites

Prerequisite steps for establishing successful connection:

- **Creation of dedicated service account** for erwin with Metadata read-only privileges in Oracle database
- **Firewall connection open** between Oracle and erwin DI Suite application server
- **Oracle Database port** opened to accept connections from erwin DI Suite application server

JDBC Driver Details

Oracle JDBC driver is out of box packaged with erwin DI Suite application. Hence, no JDBC driver configuration is required from end user standpoint.

TLS Connection Details

- Oracle JDBC 8 driver provides native TLS 1.2 support and upgrading the driver to JDBC 8 will provide the necessary resolution.

- Once the product is upgraded to the oracle JDBC 8 driver, TLS connectivity can be ensured by setting a few system parameters and also adding TLS parameters to the JDBC URL string to support connectivity using TLS 1.2

URL Format: jdbc:oracle:thin:@<Ip Address>:<Port>/< service name>+TLS params

JDBC Connection Parameters

To enter Oracle connection parameters, follow these steps:

- Select Database Type as Oracle while creating the environment.

Configuration Details	Miscellaneous
Status	<input type="text"/>
System Environment Name*	Integration

Minimum Connections Per Partitions*	<input type="text" value="3"/>
Maximum Connections Per Partitions*	<input type="text" value="5"/>
Options	<input type="text"/> 

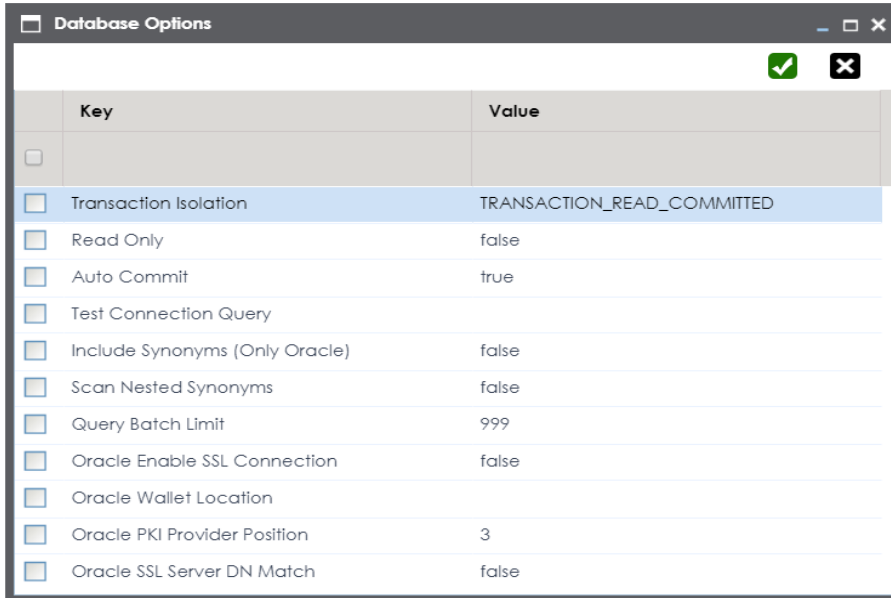

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
Driver Name	Specifies the JDBC driver name for connecting to the database. For example, oracle.jdbc.driver.OracleDriver
DBMS Name/DSN	Name of the Oracle Service – SID or TNS Service Name. For example, ErwinDIS931.
IP Address/Host Name	Enter the IP address or server host name. For example, 10.32.445.21
Port	Specifies the port to connect with the database. 1521 is the default port for the Oracle database. User can change it, if required.
User Name	Enter the Oracle (Service account) user name. For example, erwinuser.
Password	Enter the Oracle (Service account) password. For example, goerwin@1.

Field Name	Description
URL	It is autopopulated based on the other parameters. For example, jdbc:oracle:thin:@ <Ip Address>:<Port>/< service name>
DBMS Instant Schema	Specifies the name of the database schema. For example, DBO. Use this option to select multiple or narrow down to single schema.
Connection Pool Type	Specifies the connection pool type being used to connect via JDBC. For example, HIKARICP and BONECP. Select the appropriate connection pool type.
Number of Partitions	Specifies the number of partitions of the database. It is autopopulated with default number of partitions. You can edit and provide the number of partitions as required. For example, 2.
Minimum Connections Per Partitions	Specifies the minimum connections per partitions of the database. It is autopopulated with default minimum connections per partitions. You can edit and provide the minimum connections per partitions as required. For example, 3.
Maximum Connections Per Partitions	Specifies the maximum connections per partitions of the database. It is autopopulated with default maximum connections per partitions. You can edit and provide the maximum connections per partitions as required. For example, 5.

3. Click  to use database options.

The Database Options page appears. It displays the available database options.

	Key	Value
<input type="checkbox"/>		
<input type="checkbox"/>	Transaction Isolation	TRANSACTION_READ_COMMITTED
<input type="checkbox"/>	Read Only	false
<input type="checkbox"/>	Auto Commit	true
<input type="checkbox"/>	Test Connection Query	
<input type="checkbox"/>	Include Synonyms (Only Oracle)	false
<input type="checkbox"/>	Scan Nested Synonyms	false
<input type="checkbox"/>	Query Batch Limit	999
<input type="checkbox"/>	Oracle Enable SSL Connection	false
<input type="checkbox"/>	Oracle Wallet Location	
<input type="checkbox"/>	Oracle PKI Provider Position	3
<input type="checkbox"/>	Oracle SSL Server DN Match	false

To use the database options, select keys and double-click the cells under the **Value** column to set the values of the keys. Use  to save the database options.

MySQL

You can create MySQL environments by providing the necessary connection parameters.

Before creating a MySQL environment, you should take a note of the following:

- Prerequisites
- JDBC driver details
- TLS connection details
- JDBC connection parameters

Prerequisites

Prerequisite steps for establishing successful connection:

- **Creation of dedicated service account** for erwin with Metadata read-only privileges in MySQL database
- **Firewall connection open** between MySQL and erwin DI Suite application server
- **MySQL Database port** opened to accept connections from erwin DI Suite application server

JDBC Driver Details

MySQL JDBC driver is out of box packaged with erwin DI Suite application. Hence, no JDBC driver configuration is required from end user standpoint.

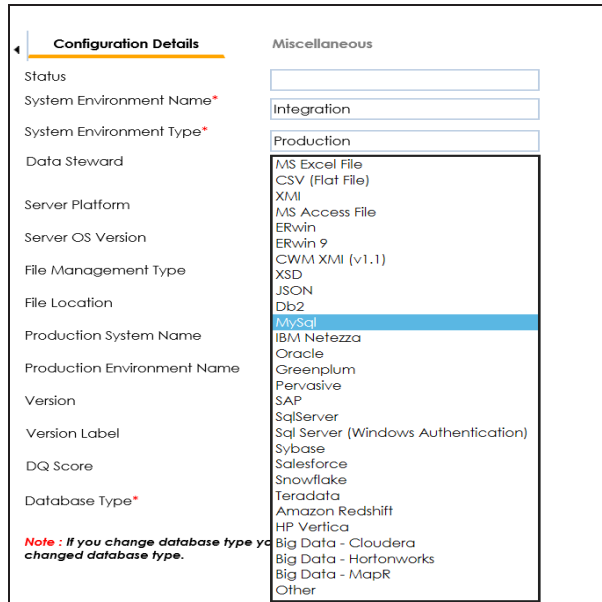

TLS Connection Details

- The MySQL JDBC driver supports connection via TLS 1.2. The TLS protocol parameter needs to be added to JDBC URL string to ensure that the connection is via TLS.
- JDBC URL being used to connect via TLS: `jdbc:mysql://IPADDRESS:3306/DATABASENAME ?useSSL=true &enabledTLSProtocols=TLSv1.2`

JDBC Connection Parameters

To enter MySQL connection parameters, follow these steps:

1. Select Database Type as MySQL while creating the environment.

The screenshot shows a 'Configuration Details' dialog box with a 'Miscellaneous' tab. The 'Database Type*' field is expanded to show a list of database options. 'MySQL' is highlighted in blue. A note at the bottom left of the dialog reads: 'Note : If you change database type you changed database type.'

Field	Value
Status	
System Environment Name*	Integration
System Environment Type*	Production
Data Steward	
Server Platform	
Server OS Version	
File Management Type	
File Location	
Production System Name	
Production Environment Name	
Version	
Version Label	
DQ Score	
Database Type*	MySQL

Note : If you change database type you changed database type.

The following connection parameters appear on the right hand side.

Driver Name*	<input type="text" value="com.mysql.jdbc.Driver"/>
DBMS Name/DSN*	<input type="text" value="ErwinDIS931"/>
IP Address/Host Name*	<input type="text" value="localhost"/>
Port	<input type="text" value="3306"/>
User Name*	<input type="text" value="sa"/>
Password*	<input type="password" value="••••••••"/>
	<input checked="" type="checkbox"/> Save Password
Url*	<input type="text" value="jdbc:mysql://localhost/ErwinDIS931"/>
Connection Pool Type*	<input type="text" value="HIKARICP"/>
Number of Partitions*	<input type="text" value="1"/>
Minimum Connections Per Partitions*	<input type="text" value="3"/>
Maximum Connections Per Partitions*	<input type="text" value="5"/>
Options	<input type="text"/> 

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
Driver Name	Specifies the JDBC driver name for connecting to the database. For example, com.mysql.jdbc.Driver
DBMS Name/DSN	Enter the MySQL database name. For example, ErwinDIS931.
IP Address/Host Name	Enter the IP address or server host name. For example, 10.32.445.21
Port	Specifies the port to connect with the database. 3306 is the default port for the MySQL database. You can change it, if required.
User Name	Enter the MySQL (Service account) user name. For example, erwinuser.
Password	Enter the MySQL (Service account) password.

Field Name	Description
	For example, goerwin@1.
URL	Specifies the full JDBC URL that is used to establish a connection with the database. It is autopopulated based on the other parameters. For example, jdbc:mysql://IPADDRESS:3306/DATABASENAME
Connection Pool Type	Specifies the connection pool type being used to connect via JDBC. For example, HIKARICP and BONECP.
Number of Partitions	Specifies the number of partitions of the database. It is autopopulated with default number of partitions. You can edit and provide the number of partitions as required. For example, 1.
Minimum Connections Per Partitions	Specifies the minimum connections per partitions of the database. It is autopopulated with default minimum connections per partitions. You can edit and provide the minimum connections per partitions as required. For example, 3.
Maximum Connections Per Partitions	Specifies the maximum connections per partitions of the database. It is autopopulated with default maximum connections per partitions. You can edit and provide the maximum connections per partitions as required. For example, 5.

To use the database options, click .

The Database Options page appears. It displays the available database options.

The screenshot shows a window titled "Database Options" with a table of configuration keys and values. The table has two columns: "Key" and "Value". The "Transaction Isolation" row is highlighted in blue. In the top right corner of the window, there are two icons: a green checkmark and a black 'X'.

	Key	Value
<input type="checkbox"/>		
<input type="checkbox"/>	Transaction Isolation	TRANSACTION_READ_COMMITTED
<input type="checkbox"/>	Read Only	false
<input type="checkbox"/>	Auto Commit	true
<input type="checkbox"/>	Test Connection Query	
<input type="checkbox"/>	Include Synonyms (Only Oracle)	false
<input type="checkbox"/>	Scan Nested Synonyms	false
<input type="checkbox"/>	Query Batch Limit	999
<input type="checkbox"/>	Oracle Enable SSL Connection	false
<input type="checkbox"/>	Oracle Wallet Location	
<input type="checkbox"/>	Oracle PKI Provider Position	3
<input type="checkbox"/>	Oracle SSL Server DN Match	false

Select keys and double-click the cells under the **Value** column to set the values of the keys. Use  to save the database options.

Snowflake

You can create Snowflake environment by providing the necessary connection parameters.

Before creating a Snowflake environment, you should take a note of the following:

- Prerequisites
- JDBC driver details
- TLS connection details
- JDBC connection parameters

Prerequisites

Prerequisite steps for establishing successful connection:

- **Creation of dedicated service account** for erwin with Metadata read-only privileges in Snowflake database
- **Snowflake Database ports 443 and 80** should be opened via firewall to accept connections from erwin DI Suite application server

JDBC Driver Details

Currently Snowflake JDBC driver is not packaged with erwin DI Suite application. Hence, Snowflake JDBC driver should be downloaded from the below mentioned URL.

Download URL: <https://docs.snowflake.net/manuals/user-guide/jdbc-download.html#downloading-the-driver>

Location to configure the JDBC driver: Once downloaded, the snowflake drivers should be placed in the following path in erwin DI Suite application server. \Apache Software Foundation\<Tomcat X.X>\webapps\erwinDISuite\WEB-INF\lib

TLS Connection Details

- The Snowflake packaged JDBC driver version 3.1.X and above implement TLS v1.2 providing the latest security patches on the protocol. So, you will not need to set any

additional properties. The connection will use TLS 1.2 encryption by default.

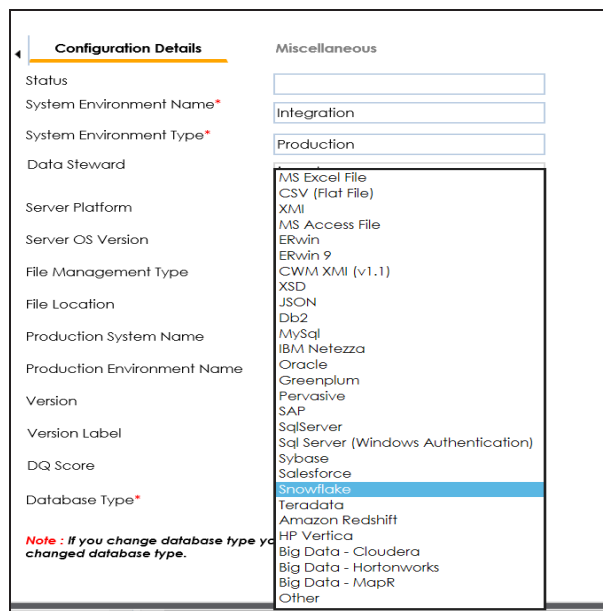

- Add SSL Parameter in Connection String (if required):

```
jdbc:snowflake://<accountname>.snowflakecomputing.com/  
?warehouse=DataWarehouseName&db=DatabaseName&schema=  
SchemaName&ssl=on
```

JDBC Connection Parameters

To enter Snowflake connection parameters, follow these steps:

1. Select Database Type as Snowflake while creating the environment.

The screenshot shows a configuration window with two panes: 'Configuration Details' on the left and 'Miscellaneous' on the right. The 'Database Type*' field in the 'Configuration Details' pane is expanded, showing a list of database types. 'Snowflake' is highlighted in blue. A note at the bottom left of the window reads: 'Note: If you change database type you changed database type.'

Configuration Details	Miscellaneous
Status	<input type="text"/>
System Environment Name*	<input type="text" value="Integration"/>
System Environment Type*	<input type="text" value="Production"/>
Data Steward	
Server Platform	MS Excel File CSV (Flat File) XMI
Server OS Version	MS Access File ERwin ERwin 9
File Management Type	CWM XMI (v1.1) XSD
File Location	JSON Db2
Production System Name	MySQL IBM Netezza
Production Environment Name	Oracle Greenplum
Version	Pervasive SAP
Version Label	SqlServer Sql Server (Windows Authentication)
DQ Score	Sybase Salesforce
Database Type*	Snowflake Teradata Amazon Redshift HP Vertica Big Data - Cloudera Big Data - Hortonworks Big Data - MapR Other

The following connection parameters appear on the right hand side.

Driver Name*	<input type="text" value="net.snowflake.client.jdbc.SnowflakeD"/>
DBMS Name/DSN*	<input type="text" value="ErwinDIS931"/>
IP Address/Host Name*	<input type="text" value="localhost"/>
Port	<input type="text" value="443"/>
User Name*	<input type="text" value="sa"/>
Password*	<input type="password" value="••••••••"/>
	<input checked="" type="checkbox"/> Save Password
Url*	<input type="text" value="jdbc:snowflake://localhost:null/?db=E"/>
DBMS Instance Schema	<input type="text" value="DBO"/> 
Connection Pool Type*	<input type="text" value="HIKARICP"/> 
Number of Partitions*	<input type="text" value="1"/>
Minimum Connections Per Partitions*	<input type="text" value="3"/>
Maximum Connections Per Partitions*	<input type="text" value="5"/>
Options	<input type="text"/> 

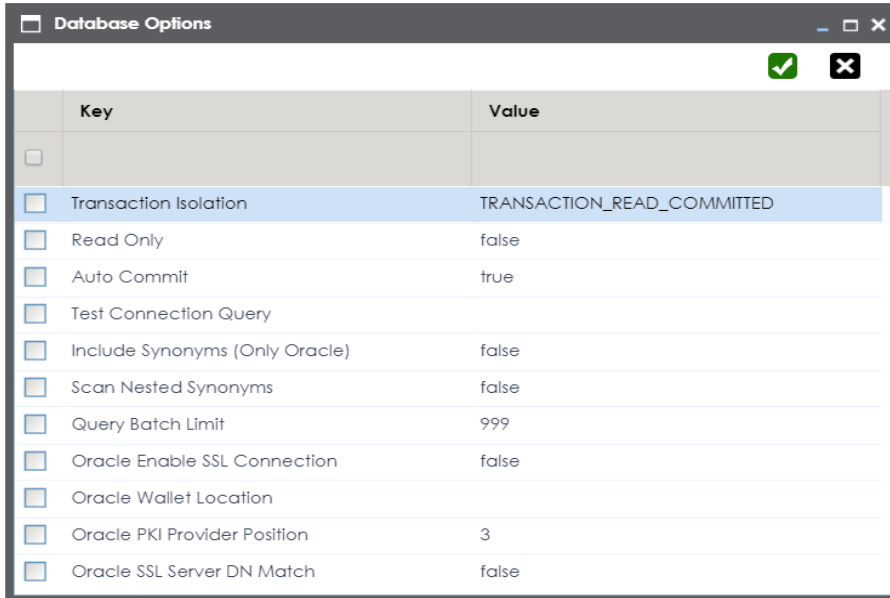

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
Driver Name	Specifies the JDBC driver name for connecting to the database. For example, com.snowflake.client.jdbc.SnowflakeDriver
DBMS Name/DSN	Enter the Snowflake database name. For example, AW2012_DV.
IP Address/Host Name	Enter <accountname>.snowflakecomputing.com For example, analytixds.us-east-1.snowflakecomputing.com
Port	Specifies the port to connect with the database. 443 is the default port for the Snowflake database. You can change it, if required.
User Name	Enter the Snowflake (Service account) user name. For example, shawn.
Password	Enter the Snowflake (Service account) password. For example, goerwin@1.

Field Name	Description
URL	<p>Specifies the full JDBC URL that is used to establish a connection with the database.</p> <p>It is autopopulated based on the other parameters.</p> <p>For example,</p> <pre>jdb- c:snowflake://<accountname>.snowflakecomputing.com/ ?warehouse=DataWarehouseName&db=DatabaseName& schema=SchemaName</pre>
DBMS Instance Schema	<p>Specifies the schema of the database.</p> <p>Use this option to select multiple or narrow down to single schema.</p>
Connection Pool Type	<p>Specifies the connection pool type being used to connect via JDBC.</p> <p>For example, HIKARICP and BONECP.</p>
Number of Partitions	<p>Specifies the number of partitions of the database.</p> <p>It is autopopulated with default number of partitions. You can edit and provide the number of partitions as required. For example, 1.</p>
Minimum Connections Per Partitions	<p>Specifies the minimum connections per partitions of the database.</p> <p>It is autopopulated with default minimum connections per partitions. You can edit and provide the minimum connections per partitions as required. For example, 3.</p>
Maximum Connections Per Partitions	<p>Specifies the maximum connections per partitions of the database.</p> <p>It is autopopulated with default maximum connections per partitions. You can edit and provide the maximum connections per partitions as required. For example, 5.</p>

To use the database options, click .

The Database Options page appears. It displays the available database options.

	Key	Value
<input type="checkbox"/>		
<input type="checkbox"/>	Transaction Isolation	TRANSACTION_READ_COMMITTED
<input type="checkbox"/>	Read Only	false
<input type="checkbox"/>	Auto Commit	true
<input type="checkbox"/>	Test Connection Query	
<input type="checkbox"/>	Include Synonyms (Only Oracle)	false
<input type="checkbox"/>	Scan Nested Synonyms	false
<input type="checkbox"/>	Query Batch Limit	999
<input type="checkbox"/>	Oracle Enable SSL Connection	false
<input type="checkbox"/>	Oracle Wallet Location	
<input type="checkbox"/>	Oracle PKI Provider Position	3
<input type="checkbox"/>	Oracle SSL Server DN Match	false

Select keys and double-click the cells under the **Value** column to set the values of the keys. Use  to save the database options.

MS Dynamics CRM

You can create MS Dynamics CRM environment by providing the necessary connection parameters.

Before creating a MS Dynamics CRM environment, you should take a note of the following:

- Prerequisites
- JDBC driver details
- TLS connection details
- JDBC connection parameters

Prerequisites

Prerequisite steps for establishing successful connection:

- **Creation of dedicated service account** for erwin with Metadata read-only privileges in MS Dynamics CRM database
- CRM Server **IP Address should be mapped with Host Names** in the file called “Hosts” which is available in the location - C:\Windows\System32\drivers\etc
- Generate CRM Domain trusted Certificate in erwin application server using InstallCert.java and place the generated “jssecacerts” file in the location - C:\Program Files\AdoptOpenJDK\jdk-XXX\jre\lib\security

Reference: <https://www.mkyong.com/webservices/jax-ws/sun-certpathbuilderexception-unable-to-find-valid-certification-path-to-requested-target/>

JDBC Driver Details

The MS Dynamics CRM JDBC driver is not packaged with erwin DI Suite application. Hence, customers needs to use the jdbc driver available at their end for MS Dynamics CRM (CDATA, Progress etc.)

You can download CDATA driver from the URL mentioned below.

Download URL: <https://www.cdata.com/drivers/dynamicscrm/download/>

Location to configure the JDBC driver: Once downloaded, the MS Dynamics CRM drivers should be placed in the following path in erwin application server: \Apache Software Foundation\<Tomcat X.X>\webapps\erwinDISuite\WEB-INF\lib and restart the Tomcat.

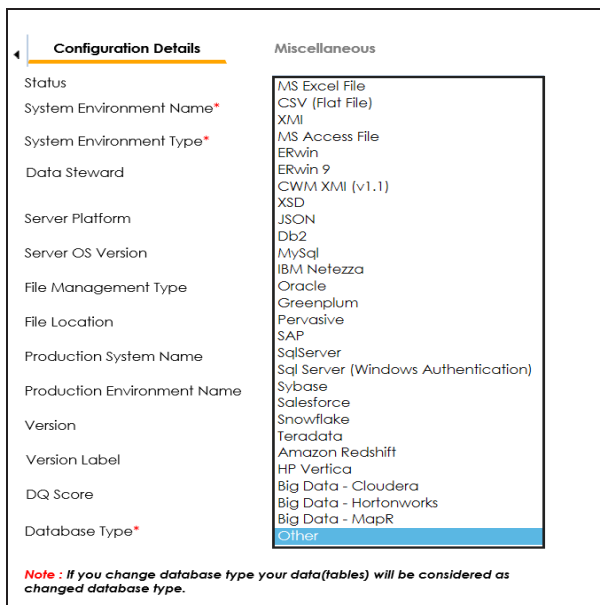

TLS Connection Details

The CDATA MS Dynamics CRM driver uses SSL by default, so you will not need to set any additional properties. The connection will use TLS 1.2 encryption.

JDBC Connection Parameters

To enter MS Dynamics CRM connection parameters, follow these steps:

1. Select **Database Type** as **Other** while creating the environment.

The following connection parameters appear on the right hand side.

Driver Name*	<input type="text" value="cdata.jdbc.dynamicscrm.DynamicsC"/>
DBMS Name/DSN*	<input type="text" value="Northwind"/>
IP Address/Host Name*	<input type="text" value="10.1.50.225"/>
Port	<input type="text" value="1433"/>
User Name*	<input type="text" value="lgadde@erwin123.onmicrosoft.com"/>
Password*	<input type="password" value="*****"/>
	<input checked="" type="checkbox"/> Save Password
Url*	<input type="text" value="jdbc:dynamicscrm:user=lgadde@erwi"/>
DBMS Instance Schema	<input type="text" value="DynamicsCRM"/> 
Connection Pool Type*	<input type="text" value="HIKARICP"/> 
Number of Partitions*	<input type="text" value="1"/>
Minimum Connections Per Partitions*	<input type="text" value="3"/>
Maximum Connections Per Partitions*	<input type="text" value="5"/>
Options	<input type="text"/> 

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
Driver Name	Specifies the JDBC driver name for connecting to the database. For example, cdata.jdbc.dynamicscrm.DynamicsCRMDriver
DBMS Name/DSN	Enter the MS Dynamics CRM Database Name. For example, CRM.
IP Address/Host Name	Enter the IP Address or Host Names of MS Dynamics CRM server. For example, 10.45.21.123
Port	Specifies the port to connect with the database. 443 is the default port for MS Dynamics CRM. You can change it, if required.
User Name	Enter the MS Dynamics CRM (Service account) user name. For example, domain\erwinuser.
Password	Enter the MS Dynamics CRM (Service account) password.

Field Name	Description
	For example, goerwin@1.
URL	<p>Specifies the full JDBC URL that is used to establish a connection with the database.</p> <p>It is autopopulated based on the other parameters.</p> <p>For example, jdb- c:dynamicscrm:User=UserName;Password=XXX;URL=<MS Dynamics CRM URL>;</p> <div style="border: 1px solid #ccc; background-color: #e6f2ff; padding: 5px; margin-top: 10px;">  <p>If user trying to connect CRM online version, then append the following value to above mentioned connection string CRM Version=CRM Online;</p> </div>
DBMS Instance Schema	<p>Specifies the schema of the database.</p> <p>For example, DynamicsCRM.</p>
Connection Pool Type	<p>Specifies the connection pool type being used to connect via JDBC.</p> <p>For example, HIKARICP and BONECP.</p>
Number of Partitions	<p>Specifies the number of partitions of the database.</p> <p>It is autopopulated with default number of partitions. You can edit and provide the number of partitions as required. For example, 1.</p>
Minimum Connections Per Partitions	<p>Specifies the minimum connections per partitions of the database.</p> <p>It is autopopulated with default minimum connections per partitions. You can edit and provide the minimum connections per partitions as required. For example, 3.</p>
Maximum Connections Per Partitions	<p>Specifies the maximum connections per partitions of the database.</p> <p>It is autopopulated with default maximum connections per partitions. You can edit and provide the maximum connections per partitions as required. For example, 5.</p>

To use database options, click .

The Database Options page appears displaying the different options available.

	Key	Value
<input type="checkbox"/>		
<input type="checkbox"/>	Transaction Isolation	TRANSACTION_READ_COMMITTED
<input type="checkbox"/>	Read Only	false
<input type="checkbox"/>	Auto Commit	true
<input type="checkbox"/>	Test Connection Query	
<input type="checkbox"/>	Include Synonyms (Only Oracle)	false
<input type="checkbox"/>	Scan Nested Synonyms	false
<input type="checkbox"/>	Query Batch Limit	999
<input type="checkbox"/>	Oracle Enable SSL Connection	false
<input type="checkbox"/>	Oracle Wallet Location	
<input type="checkbox"/>	Oracle PKI Provider Position	3
<input type="checkbox"/>	Oracle SSL Server DN Match	false

Select keys and double-click the cells under the **Value** column to set the values of the keys. Use  to save the database options.

SAP

You can create SAP environments by providing the necessary connection parameters.

Before creating a SAP environment, you should take a note of the following:

- Privileges
- Prerequisites
- JDBC driver details
- TLS connection details
- JDBC connection parameters

Privileges

Privileges given to service account:

- User type = System
- User group = SUPER
- Authorization profile = S_DDIC

Prerequisites

Prerequisite steps for establishing successful connection:

- **Creation of dedicated service account** for erwin with Metadata read-only privileges in SAP system
- Open Firewall connection between SAP and erwin DI Suite application server
- Get the SAP System Number and Client details

JDBC Driver Details

The SAP JCO driver is not packaged with erwin DI Suite application. Hence, customer must get the JCO driver from their respective SAP team and deploy the same in erwin application server.

The following sapjco files are required:

- Sapjco.jar
- Sapjco3.dll

Location to place these files

- Copy sapjco.jar into webinf/lib folder
- Copy sapjco3.dll copy into windows/system32 folder

The tool connects to the SAP system directly using SAP JCO drivers and not to SAP backend database.

TLS Connection Details

In order to use SSL with the JCO, we will need to:

- Set up the SAP system for SSL (SNC setup)
- Create a certificate (X509) for the user
- Pass the user as \$X509CERT\$ (check JCO doc)
- Pass some key from the cert as passwd in the JCO

JCO Connection Parameters

To enter SAP connection parameters, follow these steps:

1. Select Database Type as SAP while creating the environment.

The screenshot shows a 'Configuration Details' form with a 'Miscellaneous' section. The 'Database Type*' field is highlighted, and a dropdown menu is open, listing various database options. 'SAP' is selected and highlighted in blue. A note at the bottom left of the dropdown reads: 'Note : If you change database type you changed database type.'

Field	Value
Status	
System Environment Name*	Integration
System Environment Type*	Production
Data Steward	MS Excel File CSV (Flat File) XML
Server Platform	MS Access File
Server OS Version	ERwin ERwin 9 CWM XML (v1.1)
File Management Type	XSD
File Location	JSON
Production System Name	Db2 MySQL
Production Environment Name	IBM Netezza Oracle Greenplum Pervasive
Version	SAP
Version Label	SqlServer Sql Server (Windows Authentication)
DQ Score	Sybase Salesforce Snowflake
Database Type*	Teradata Amazon Redshift HP Vertica Big Data - Cloudera Big Data - Hortonworks Big Data - MapR Other

The following connection parameters appear on the right-hand side.

The screenshot shows a form for connection parameters. Fields marked with a red asterisk are mandatory. The values entered are: System Number: 24; Client: 800; IP Address/Host Name: 10.1.50.59; Field Delimiter: , [Comma]; User Name: sapuser; Password: masked with dots; Save Password: checked; Existing CSV File: empty; CSV File: drag-and-drop area with an upload icon.

System Number*	24
Client*	800
IP Address/Host Name*	10.1.50.59
Field Delimiter*	, [Comma]
User Name*	sapuser
Password*
Save Password	<input checked="" type="checkbox"/>
Delete and Reload	<input type="checkbox"/>
Existing CSV File	
CSV File	Drag-n-Drop files here or click to select files for upload.

2. Enter appropriate values in the fields (connection parameters). The fields marked with a red asterisk are mandatory.

Field Name	Description
System Number	Specifies the SAP System Instance Number (range 0-99). For example, 24.
Client	Specifies the SAP Client number (range 000-999). For example, 800.
IP Address/Host Name	Specifies the IP address or server host name of the database. For example, 192.168.100.200
User Name	Specifies the SAP (Service account) username. For example, sapuser.
Password	Specifies the SAP (Service account) password. For example, goerwin@1.
CSV File Upload	Browse the CSV file which contains name of SAP tables to be harvested.
Field Delimiter	Select the required delimiter. For example: , [Comma].

Assigning Roles and Users

You can give users the write access to an environment in the following two ways:

- Assign roles to the environment and the users assigned to these roles get write access to the environment
- Assign users directly to an environment

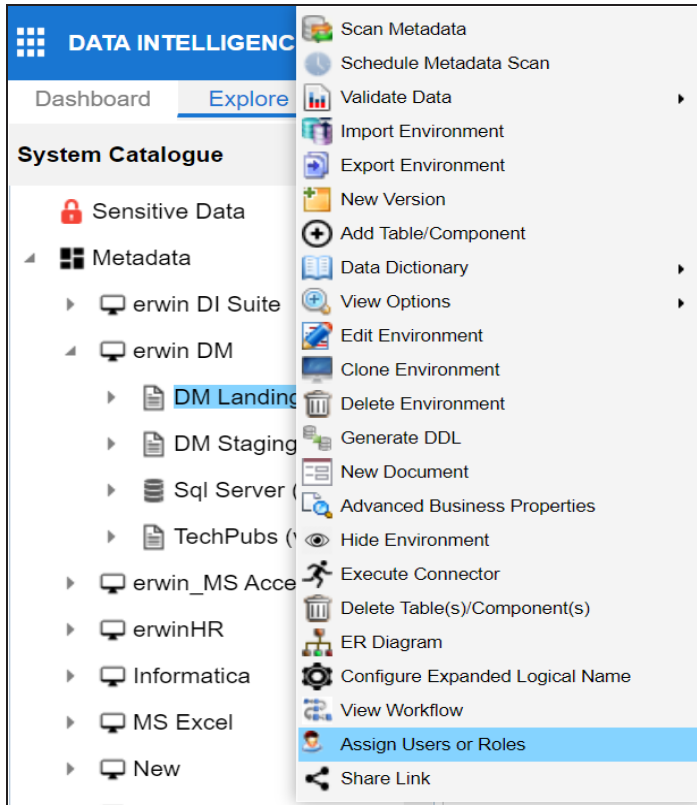

Ensure that you provide necessary permissions to the roles assigned to the users.

Assigning Roles

To assign roles, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

The available options appear.

3. Click **Assign Users or Roles**.

The Assign/Unassign Users or Roles page appears. By default, the Roles tab opens.

You can click View to view users assigned to a role.

Assign/Unassign Users or Roles

Roles Users

#	Select Role	Role Name	Role Description	Role Users
	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	
4	<input type="checkbox"/>	Data Owner_UK	their functional areas for UK. A Data Owner may decide to review and authorize each access request individually or may define a set of rules that determine who is eligible for access based on business function, support role, etc.	View
5	<input type="checkbox"/>	Data Steward_GER	This role is responsible for utilizing Germany's data governance processes to ensure fitness of data elements - both the content and metadata.	View
6	<input type="checkbox"/>	Data Steward_Hung	This role is responsible for utilizing Hungary's data governance processes to ensure fitness of data elements - both the content and metadata.	View
7	<input type="checkbox"/>	Data Steward_RO	This role is responsible for utilizing Romania's data governance processes to ensure fitness of data elements - both the content and metadata.	View
8	<input type="checkbox"/>	Data Steward_UK	This role is responsible for utilizing UK's data governance processes to ensure fitness of data elements - both the content and metadata.	View
9	<input type="checkbox"/>	ETL Developer	Create, edit or delete any mapping defined in a project to which he is assigned (Role is currently identical to Mapping Designer role). This role is a place holder for further categorization of roles and responsibilities in	View

Note: Only Non-Administrator Roles are displayed here

4. Select the required roles.

5. Click .

The selected roles are assigned to the environment.

Assigning Users

To assign users, on the **Assign/Unassign Users or Roles** page, click the **Users** tab.

Assign/Unassign Users or Roles

Roles **Users**

#	Select User	User ID	User Full Name	Assigned Roles
	<input type="checkbox"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
1	<input checked="" type="checkbox"/>	jadams	Joey Adams	Tech Data Steward_GER
2	<input checked="" type="checkbox"/>	John Doe	John Doe	Old_DataSteward
3	<input checked="" type="checkbox"/>	mjones	Mike Jones	Data Owner_UK

Select the required users and click .

The users are assigned to the environment.

Managing Environments

Managing Environments involves:

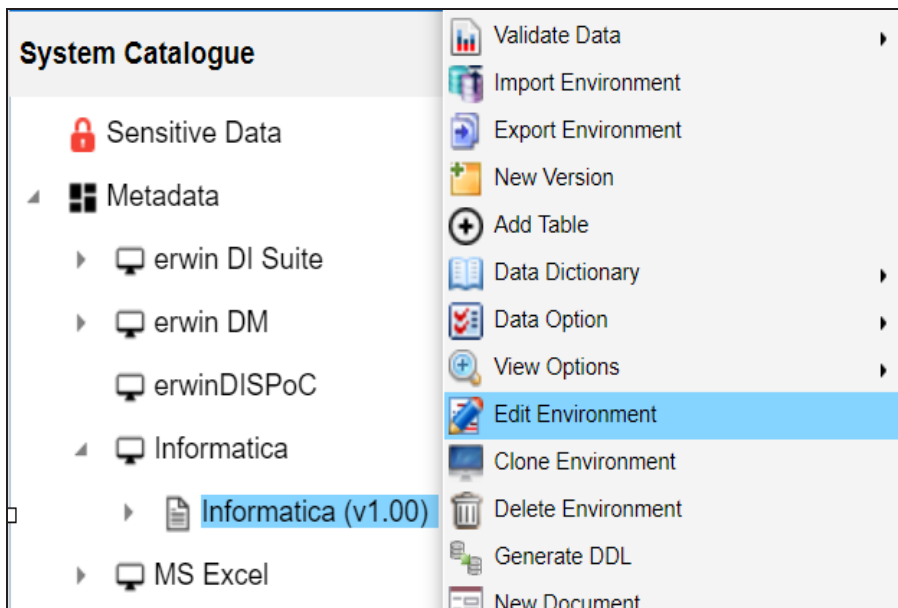

- Editing or deleting environments
- Importing metadata from different environments

Editing and Deleting Environments

To edit or delete environments, follow these steps:

1. In the **System Catalogue** pane, right-click an environment.

The options available appear.

2. Use the following options:

Edit Environment

Use this option to update the environment details.

The status of an environment is displayed according to the workflow assigned to the environment. For more information on

assigning workflow to environments, refer to the [Managing Metadata Manager Workflows](#) section.

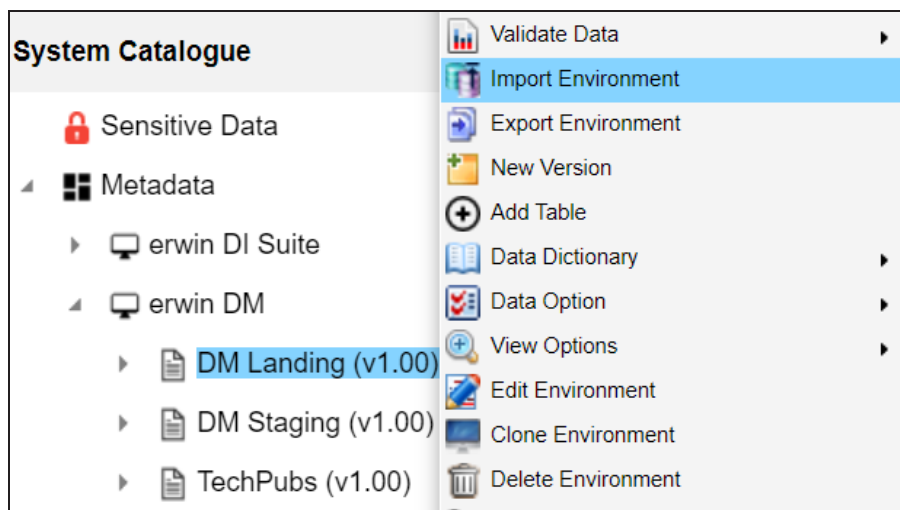

Delete Environment

Use this option to delete the environment.

Importing Metadata from an Environment

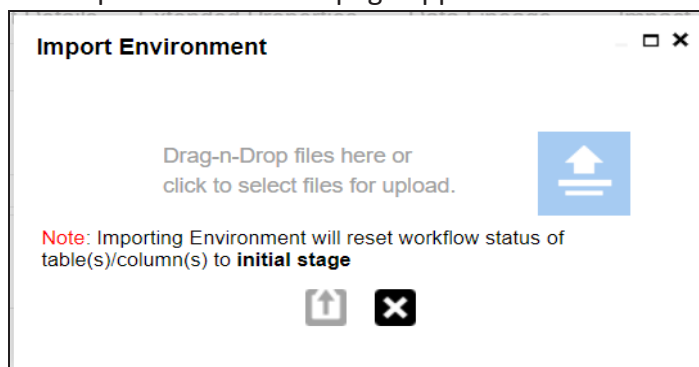

To import metadata from an environment, follow these steps:

1. In the **System Catalogue** pane, right-click an environment.

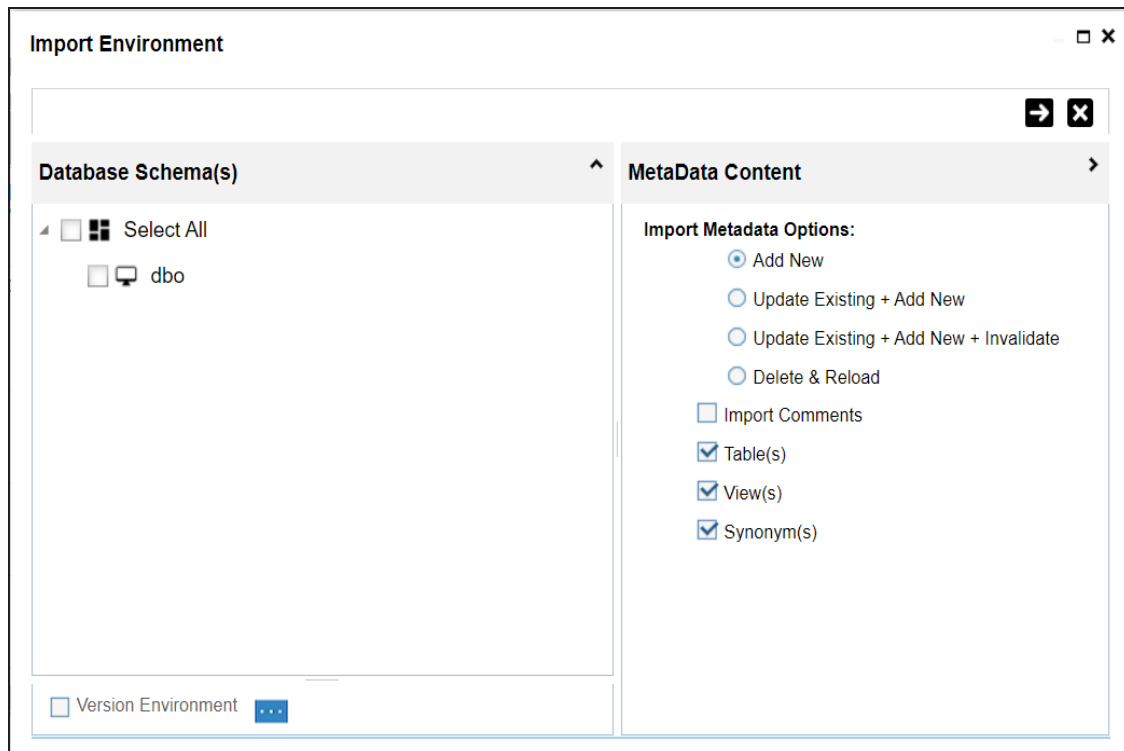

2. Click **Import Environment**.

The Import Environment page appears.

3. Drag and drop or use  to browse the exported AMP file.
4. Click .

5. Select Schemas and appropriate import metadata options.

Select the **Version Environment** check box to create a version of the environment.

6. Click .
 7. Select the tables and click .
- The environment is imported.

Updating Sensitivity

Marking your technical and business assets as sensitive is an important aspect of metadata management. It is possible to update sensitivity of technical and business assets in bulk.

You can select multiple columns or tables in the Data Dictionary grid and update their sensitivity. For more information on updating sensitivity in bulk at column or table level, refer to the [Data Dictionary](#) topic.

Sometimes a column and its associated assets are required to be marked sensitive. You can update sensitivity of the column and its associated assets in a mind map. For more information on updating sensitivity of assets in a mind map, refer to the [Mind Map](#) topic.

You can also update sensitivity of columns in a lineage report. For more information on updating sensitivity of columns in a lineage report, refer to the [Lineage](#) topic.

Data Dictionary

You can update the sensitivity of tables and columns in an environment in bulk. You can also update the sensitivity of the system and environment containing these tables and columns. Updating sensitivity involves marking, tables and columns as sensitive with an appropriate sensitive data indicator (SDI) classification.

You can configure email notifications to be sent whenever sensitivity is updated in bulk. For more information on configuring email notifications, refer to the [Configuring Sensitivity Update Notifications](#) topic.

Bulk Asset Update

You can update the sensitivity in bulk at table and column level.

Table Level

To update sensitivity of tables in bulk, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click an environment.
By default, the Data Dictionary tab opens.
3. On the **Data Dictionary** tab, select the required rows.
You can use the check box at top to select all the rows.
4. Hover over **Update Sensitivity**.

#	Options	Table Name	Column Name	Sensitive Data Indicator (Y/N)	Sensitive Data Indicator (SDI) Classification	Sensitive Data Indicator (SDI) Description	Selected Table(s)	Selected Column(s)
1	<input checked="" type="checkbox"/>  	dbo.ADS_ASSOCIATIONS	ID					
2	<input checked="" type="checkbox"/>  	dbo.ADS_ASSOCIATIONS	SOURCE_OBJECT_ID					
3	<input type="checkbox"/>  	dbo.ADS_ASSOCIATIONS	SOURCE_OBJECT_TYP...					

5. Click **Selected Table(s)**.

The Update Sensitivity For Table(s) page appears.

Update Sensitivity For Table(s) Update Cancel

All Classified And Unclassified

6. Enter or select appropriate values in the fields. Refer to the following table for field descriptions.

Field Name	Description
Sensitive Data Indicator (SDI) Flag	Specifies whether the selected tables are sensitive. Switch Sensitive Data Indicator (SDI) Flag to YES to mark the tables as sensitive.
Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the selected tables. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . For more information on configuring SDI classifications, refer to the Configuring Sensitivity Classifications topic.
Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . The field autopopulates based on the SDI classification.
Update Sensitivity For	Specifies whether sensitivity is applicable to: <ul style="list-style-type: none"> ▪ Column(s): Switch Column(s) to YES to apply the sensitivity to all the columns in the selected tables. ▪ Environment: Switch Environment to YES to apply sensitivity to the environment containing the tables. ▪ System: Switch System to Yes to apply sensitivity to the system containing the tables.
Metadata Update Options	Specifies whether sensitivity is applicable to: <ul style="list-style-type: none"> ▪ Unclassified only: Click Unclassified Only to apply sensitivity to assets that are not marked sensitive. ▪ All Classified Only: Click All Classified Only to apply sensitivity to assets that are marked sensitive. ▪ All Classified And Unclassified: Click All Classified And Unclassified to apply sensitivity to both the types of assets, sensitive or not sensitive.

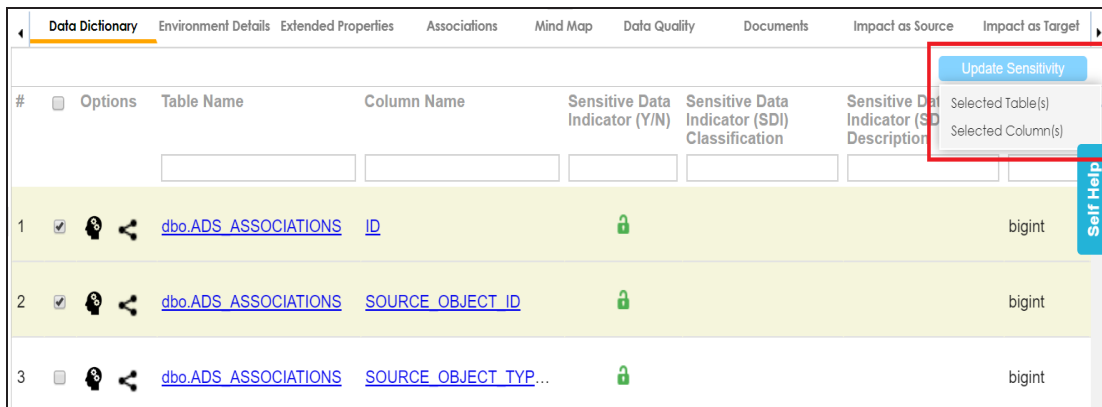

7. Click **Update**.

The sensitivity of the metadata is updated based on the options you selected.

Column Level

To update sensitivity of columns in bulk, follow these steps:

1. On the **Data Dictionary** tab, select the required rows.
You can use the check box at top to select all the rows.
2. Hover over **Update Sensitivity**.

3. Click **Selected Column(s)**.

The Update Sensitivity For Column(s) page appears.

Update Sensivity For Column(s) □ ×

4. Enter or select appropriate values in the fields. Refer to the following table for field descriptions.

Field Name	Description
Sensitive Data Indicator (SDI) Flag	Specifies whether the selected columns are sensitive. Switch Sensitive Data Indicator (SDI) Flag to YES to mark the columns as sensitive.
Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the selected columns. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . For more information on configuring SDI classifications, refer to the Configuring Sensitivity Classifications topic.
Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . The field autopopulates based on the SDI classification.

Field Name	Description
Update Sensitivity For	Specifies whether sensitivity is applicable to: <ul style="list-style-type: none"> ▪ Table(s): Switch Table(s) to YES to apply sensitivity to the tables containing the columns. ▪ Environment: Switch Environment to YES to apply sensitivity to the environment containing the columns. ▪ System: Switch System to Yes to apply sensitivity to the system containing the columns.
Metadata Update Options	Specifies whether sensitivity is applicable to: <ul style="list-style-type: none"> ▪ Unclassified only: Click Unclassified Only to apply sensitivity to assets that are not marked sensitive. ▪ All Classified Only: Click All Classified Only to apply sensitivity to assets that are marked sensitive. ▪ All Classified And Unclassified: Click All Classified And Unclassified to apply sensitivity to both the types of assets, sensitive or not sensitive.

5. Click **Update**.

The sensitivity of the metadata is updated based on the options you selected.

Individual Asset Update

You can view and update the sensitivity of technical assets (systems, environments, tables, and columns) individually.

To view and update the sensitivity of technical assets individually, follow these steps:

- **Table and Column:**
In the Data Dictionary tab, you can click <Column_Name> and <Table_Name> to view and edit the sensitivity of the column and table respectively.
- **Environment:**
Sensitivity of an environment can be viewed under the Environment Details tab. You

can [edit an environment](#), and update its sensitivity under the Miscellaneous tab.

Data Dictionary	Environment Details	Extended Properties	Associations	Mind Map	Data Quality	Documents	Impact as Source	Impact as Target
DQ Score	<input type="text"/>			Number of Partitions*			<input type="text" value="2"/>	
Database Type*	<input type="text" value="SqlServer"/>			Minimum Connections Per Partitions*			<input type="text" value="3"/>	
Version	<input type="text" value="1.00"/>			Maximum Connections Per Partitions*			<input type="text" value="5"/>	
Version Label	<input type="text"/>			Options			<input type="text"/>	
Sensitive Data Indicator (SDI) Flag				Sensitive Data Indicator (SDI) Classification			<input type="text" value="Confidential"/>	
Sensitive Data Indicator (SDI) Description	<input type="text" value="Sensitive Data that if compromised could negatively affect operations"/>							

■ **System:**

The sensitivity of the system can be viewed under the System Details tab. You can [edit a system](#), and update its sensitivity.

Data Dictionary	System Details	Extended Properties	Associations	Mind Map	System Documents	Configure Extended Properties	Scheduled Jobs
Database Type	<input type="text"/>			SQL Server Instance Name			<input type="text"/>
Total DBSize	<input type="text"/>			Total Number Of Tables			<input type="text" value="0"/>
Definition Of The Day	<input type="text"/>			Batch Extract Window			<input type="text"/>
Average User	<input type="text"/>			Average Concurrent Users			<input type="text"/>
Sensitive Data Indicator (SDI) Flag				Sensitive Data Indicator (SDI) Classification			<input type="text" value="Confidential"/>
Sensitive Data Indicator (SDI) Description	<input type="text" value="Sensitive Data that if compromised could negatively affect operations"/>						

Lineage

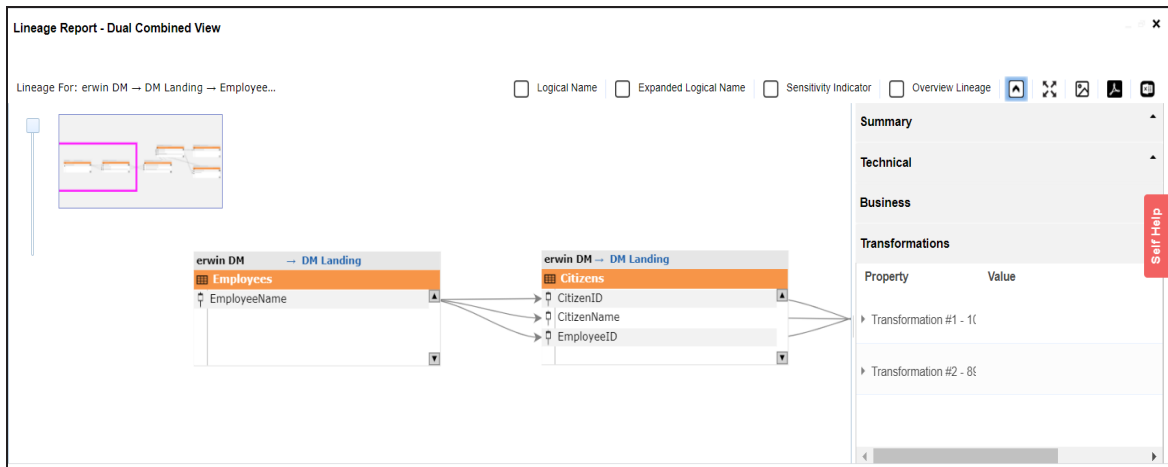

You can update the sensitivity of columns in a lineage report. You can also update the sensitivity of tables, environments, and systems containing these columns.

You can configure email notifications to be sent whenever sensitivity is updated in bulk. For more information on configuring email notifications, refer to the [Configuring Sensitivity Update Notifications](#) topic.

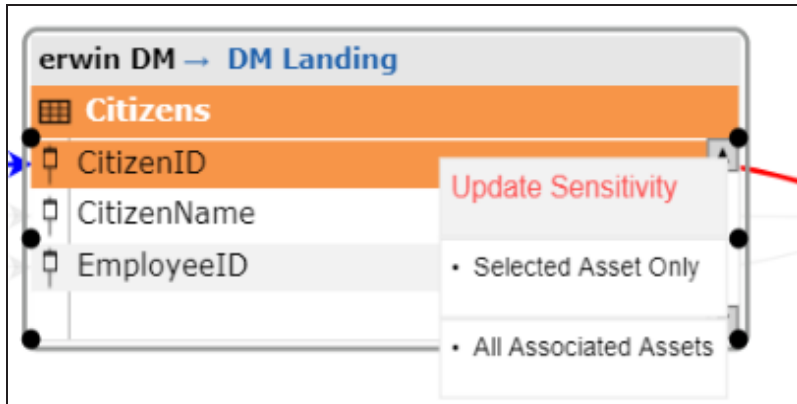

To update sensitivity of columns in lineage reports, follow these steps:

1. In the **System Catalogue** pane, click an environment.
By default, the Data Dictionary tab opens.
2. On the **Data Dictionary** tab, click  for the required column.

The Lineage Report - Dual Combined View page appears.

3. In the lineage report, click a column, and then right-click the column.

4. Use the following options:

Selected Asset Only

Use this option to update sensitivity of the column. You can also update sensitivity of the table, environment, and system containing the column.

All Associated Assets

Use this option to update sensitivity of multiple columns in the lineage report. You can also update sensitivity of the tables, environments, and systems containing these columns.

Refer to the following table for field descriptions when you use above options.

Field Name	Description
Sensitive Data Indicator (SDI) Flag	Specifies whether the selected columns are sensitive. Switch Sensitive Data Indicator (SDI) Flag to YES to mark the selected assets as sensitive.
Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the selected columns. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . For more information on configuring SDI classifications, refer to the Configuring Sensitivity Classifications topic.
Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information.

Field Name	Description
	It is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . The field autopopulates based on the SDI classification.
Asset Update Options	Specifies whether sensitivity is applicable to: <ul style="list-style-type: none"> ▪ Unclassified Only: Click Unclassified Only to apply sensitivity to assets that are not marked sensitive. ▪ All Classified Only: Click All Classified Only to apply sensitivity to assets that are marked sensitive. ▪ All Classified And Unclassified: Click All Classified And Unclassified to apply sensitivity to both the types of assets, sensitive or not sensitive.
Auto Update Sensitivity For	Specifies whether the sensitivity is applicable to: <ul style="list-style-type: none"> ▪ System(s): Switch System(s) to Yes to apply sensitivity to all the systems containing the columns. ▪ Environment(s): Switch Environment(s) to YES to apply sensitivity to all the environments containing the columns. ▪ Table(s): Switch Table(s) to YES to apply sensitivity to the tables containing the columns.

5. Click **Update**.

The sensitivity of the assets is updated based on the options you selected.

To update sensitivity of multiple columns in lineage reports, follow these steps:

1. In the lineage report, right-click the column.
2. Click **All Associated Assets**.

The Sensitive Data Classification - Lineage page appears.

Auto Update Sensitivity For:

System(s) YES

Environment(s) YES

Table(s) YES

5. Enter or select appropriate values in the fields. Refer to the table above for field descriptions.

6. Click **Update**.

The sensitivity of the metadata is updated based on the options you selected.

Mind Map

You can update the sensitivity of an asset and its associated technical and business assets through a mind map.

Business assets refer to business terms, business policies, business rules, and other business assets defined in the Business Glossary Manager Settings. Technical assets refer to columns, tables, environments, and systems. A column can be associated with business and technical assets. For more information on associating columns, refer to the [Associating Columns](#) topic.

You can configure email notifications to be sent whenever sensitivity is updated in bulk. For more information on configuring email notifications, refer to the [Configuring Sensitivity Update Notifications](#) topic.

Selected Asset

You can update sensitivity of an asset individually through a mind map.

To update sensitivity of assets individually through mind maps, follow these steps:

1. In the **System Catalogue** pane, click an environment.

By default, the Data Dictionary tab opens.

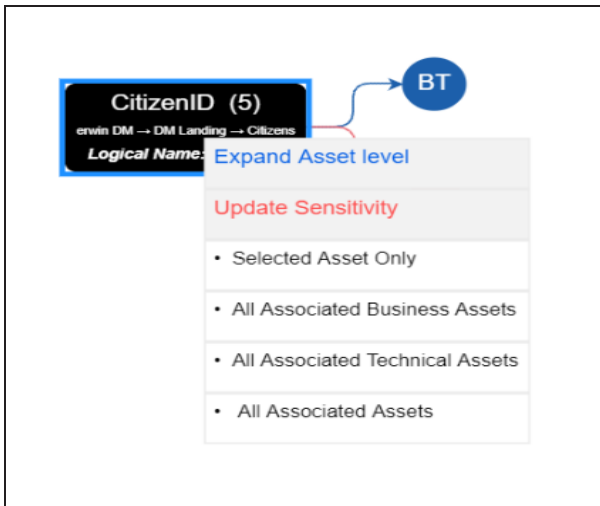

2. On the **Data Dictionary** tab, click  for the required column.

The Mind Map page appears.

3. On the mind map, right-click the required asset.

The options available for the asset appear.

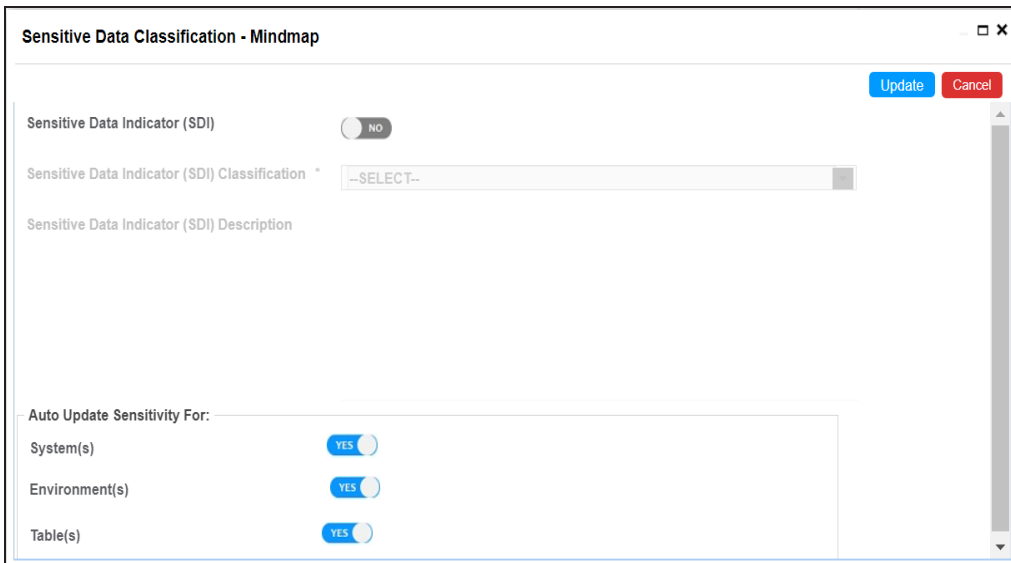

4. Click **Selected Asset Only**.

The Sensitive Data Classification - Mind Map page appears.

The Auto Update Sensitivity For field does not appear for business assets.

5. Enter or select appropriate values in the fields. Refer to the following table for field descriptions:

Field Name	Description
Sensitive Data Indicator (SDI) Flag	Specifies whether the selected asset is sensitive. Switch Sensitive Data Indicator (SDI) Flag to YES to mark the selected asset as sensitive.
Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the selected asset. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . For more information on configuring SDI classifications, refer to the Configuring Sensitivity Classifications topic.
Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to YES . The field autopopulates based on the SDI classification.
Auto Update Sensitivity For	Specifies whether sensitivity is applicable to: <ul style="list-style-type: none"> ▪ System(s): Switch System(s) to Yes to apply sensitivity to all the systems containing the assets. ▪ Environment(s): Switch Environment(s) to YES to apply sensitivity to all the environments containing the assets. ▪ Table(s): Switch Table(s) to YES to apply sensitivity to the tables containing the assets.

6. Click **Update**.

The sensitivity of the asset and metadata is updated based on the options you selected.

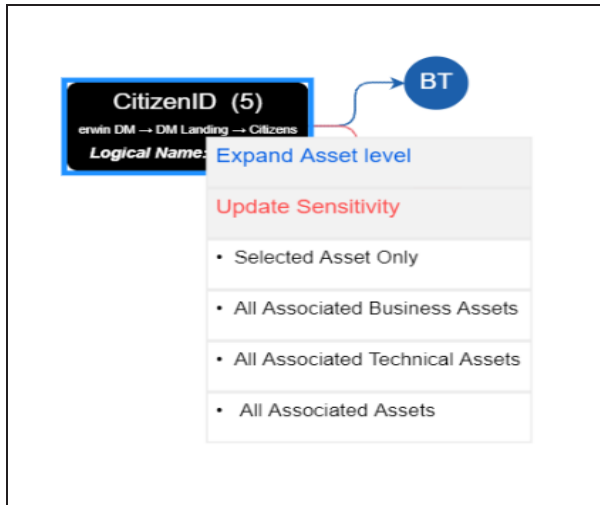

Associated Assets

You can update sensitivity of associated assets in bulk through a mind map.

To update sensitivity of associated assets through mind maps, follow these steps:

1. On the mind map, right-click an asset.

The options available for the asset appear.

2. Click any one of the following:

- **All Associated Business Assets:**
Click this option to update sensitivity of associated business assets.
- **All Associated Technical Assets:**
Click this option to update sensitivity of associated technical assets.
- **All Associated Assets:**
Click this option to update sensitivity of associated business and technical assets.

For example, if you click All Associated Business Assets then a list of all associated business assets appear. You can filter the assets by entering text in the filter box.

6. Click **Update**.

The sensitivity of the selected assets and metadata is updated based on the options you selected.

Viewing Sensitive Data Dashboard

Sensitive data dashboard is the primary window to gain insights about distribution of sensitive columns across systems and environments. The dashboard helps to rediscover sensitive columns with their Sensitive Data Indicator (SDI) classifications. It displays sensitive data in several formats including a statistics board, pie chart, bar graph, and summary grid.

To access sensitive data dashboard, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click **Sensitive Data**.

The sensitive data dashboard appears.

UI Section	Function
1- Statistics Board	It displays total number of tables, columns, sensitive tables, and sensitive columns.
2- Pie Chart	It displays distribution of sensitive columns based on SDI classifications across all the systems.
3- Bar Graph	It displays number of sensitive columns and their SDI classifications in

UI Section	Function
	each system.
4-Summary Grid	It displays list of all the sensitive columns with their SDI classifications.

Statistics Board

By default, It shows number of sensitive tables and columns across all the systems. For example, in the following image there is one sensitive table and eight sensitive columns across all the systems.

You can use System Name to view number of sensitive columns and tables in a system. If a system has multiple environments, then use Environment Name to view number of sensitive columns and tables in an environment.

Pie Chart

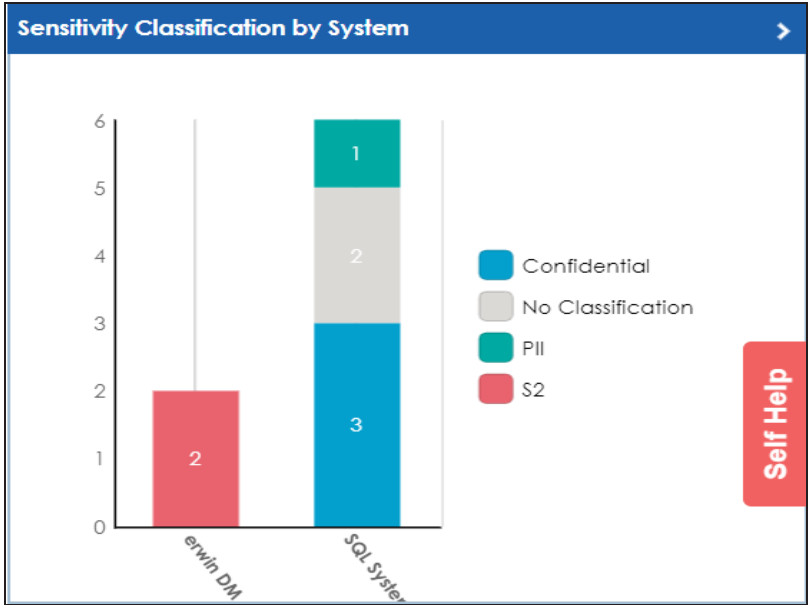

By default, it displays distribution of sensitive columns based on SDI classifications across all the systems. For example, the following image displays a pie chart, in which three columns are classified as Confidential, two columns as No Classification, one column as PII, and two columns as S2.

You can use System Name to view distribution of sensitive columns based on SDI classifications in a system. If a system has multiple environments, then use Environment Name to view distribution of sensitive columns based on SDI classifications in an environment.

Bar Graph

By default, it displays the number of sensitive columns and their SDI classifications in each system. For example, the following image displays a bar graph where, the number of sensitive columns and their SDI classifications is shown in the two systems, erwin DM and SQL System.

You can use System Name to view distribution of sensitive columns based on SDI classifications by environments in a system. If a system has multiple environments, then you can use Environment Name to view distribution of sensitive columns based on SDI classifications in an environment.

Summary Grid

By default, it displays a list of all the sensitive columns with their SDI classifications across all the systems. You can click the required <System Name>, <Environment Name>, <Table Name>, or <Column Name> in the grid to view their details.

For example, the following image displays all the sensitive columns across all the systems in the grid.

Summary of Sensitive Columns						
#	System Name	Environment Name	Table Name	Column Name	SDI Class Name	SDI Class Description
1	erwin_DM	DM Landing	Employees	EmployeeName	S2	sd
2	erwin_DM	DM Landing	Employees	EmployeeID	S2	sd
3	SQL System	Northwind	dbo.Categories	CategoryID	Confidential	Confidential
4	SQL System	SQL Env	dbo.DimAccount	Operator	Confidential	Confidential

<< < Records from 1 to 8 > >> Page 1 25 rows per page

You can use System Name and Environment Name to filter the sensitive columns in the grid. You can also click the pie chart and bar graph to display relevant sensitive columns in the grid.

Use **System Name** and **Environment Name** to filter the statistics and summary of the sensitive columns.

You can also click on pie chart and bar graph to filter summary of the sensitive columns.

Use the following options to work on the Summary of Sensitive Columns grid.

Filtering Rows

Use this option to filter the required rows by entering the required text in one of the five filters.

Reset ()

Use this option to reset the Summary of Sensitive Columns grid.

Export to excel ()

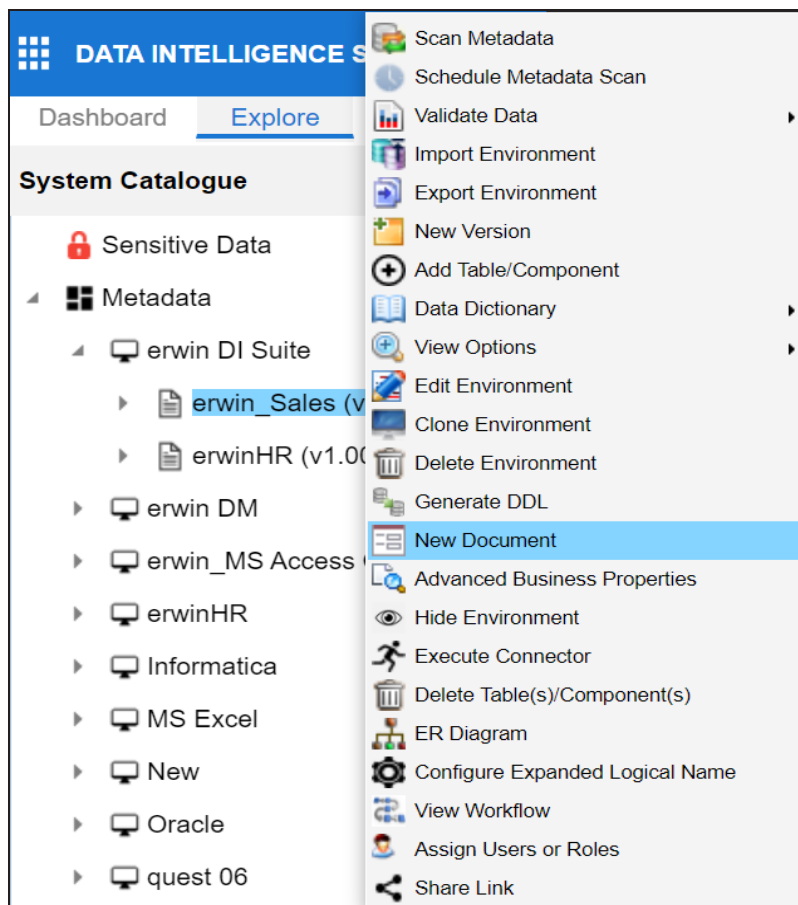

Use this option to download the required summary of the sensitive columns.

Adding Documents

You can add supporting documents, such as text files, audio files, video files, document links, and so on to an environment.

To add documents to environments, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **New document**.

The Environment Documents page appears.

The screenshot shows a web form titled "Environment Documents". It contains the following fields and controls:

- Document Name***: A text input field with a red asterisk indicating it is mandatory.
- Document Owner**: A text input field.
- Document Object**: A drag-and-drop area with the text "Drag-n-Drop files here or click to select files for upload." and a blue upload button with an upward arrow.
- Document Link**: A text input field.
- Description**: A rich text editor with a toolbar containing icons for bold, italic, underline, link, unlink, list, and other text formatting options.
- Approval Required Flag**: A checkbox at the bottom left of the form.

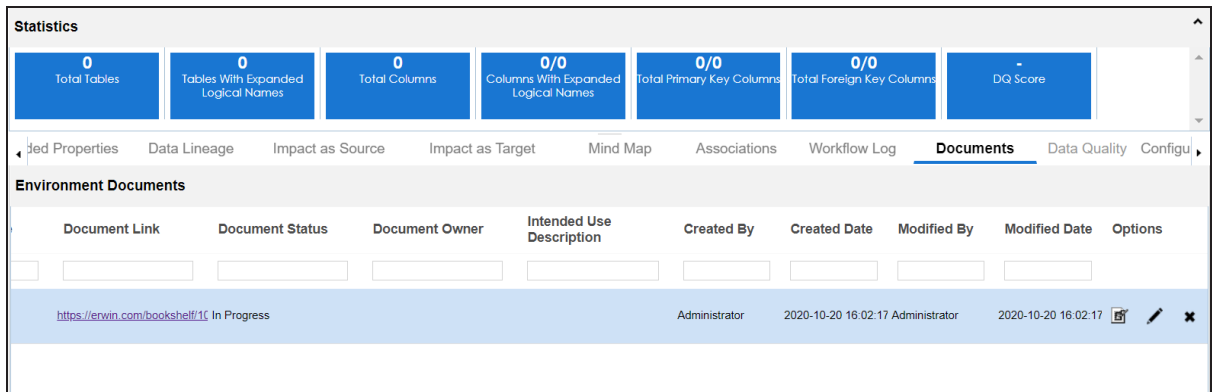

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Document Name	Specifies the name of the physical document being attached to the environment. For example, Source Environment Details.
Document Object	Drag and drop document files or use  to select and upload document files.
Document Owner	Specifies the document owner's name. For example, John Doe.
Document Link	Specifies the URL of the document. For example, https://drive.google.com/file/d/2sC2_SZlYeFKI7OOn-b5YkMBq4ptA7jhg5/view
Description	Specifies the description about the document. For example: The document has information about the environment details.
Approval Required Flag	Specifies whether the document requires approval. Select the Approval Required Flag check box to select the document status.

Field Name	Description
Document Status	Specifies the status of the document. For example, In Progress. This field is available only when the Approval Required Flag check box is selected.

5. Click .

The document is saved in the Environment Documents grid.

The screenshot shows the Erwin Data Quality tool interface. At the top, there is a 'Statistics' section with several blue boxes displaying counts: Total Tables (0), Tables With Expanded Logical Names (0), Total Columns (0), Columns With Expanded Logical Names (0/0), Total Primary Key Columns (0/0), Total Foreign Key Columns (0/0), and DQ Score (-). Below this is a navigation bar with tabs for 'Selected Properties', 'Data Lineage', 'Impact as Source', 'Impact as Target', 'Mind Map', 'Associations', 'Workflow Log', 'Documents' (selected), 'Data Quality', and 'Configuration'. The main area is titled 'Environment Documents' and contains a table with the following columns: Document Link, Document Status, Document Owner, Intended Use Description, Created By, Created Date, Modified By, Modified Date, and Options. A single row is visible with the following data: Document Link: <https://erwin.com/bookshelf/1C>, Document Status: In Progress, Document Owner: Administrator, Intended Use Description: (empty), Created By: Administrator, Created Date: 2020-10-20 16:02:17, Modified By: Administrator, Modified Date: 2020-10-20 16:02:17, and Options: (edit icon), (delete icon).

Once a supporting document is added, use the following options:

Preview ()

Use this option to preview the document for your information.

Edit ()

Use this option to update the document details.

Delete ()

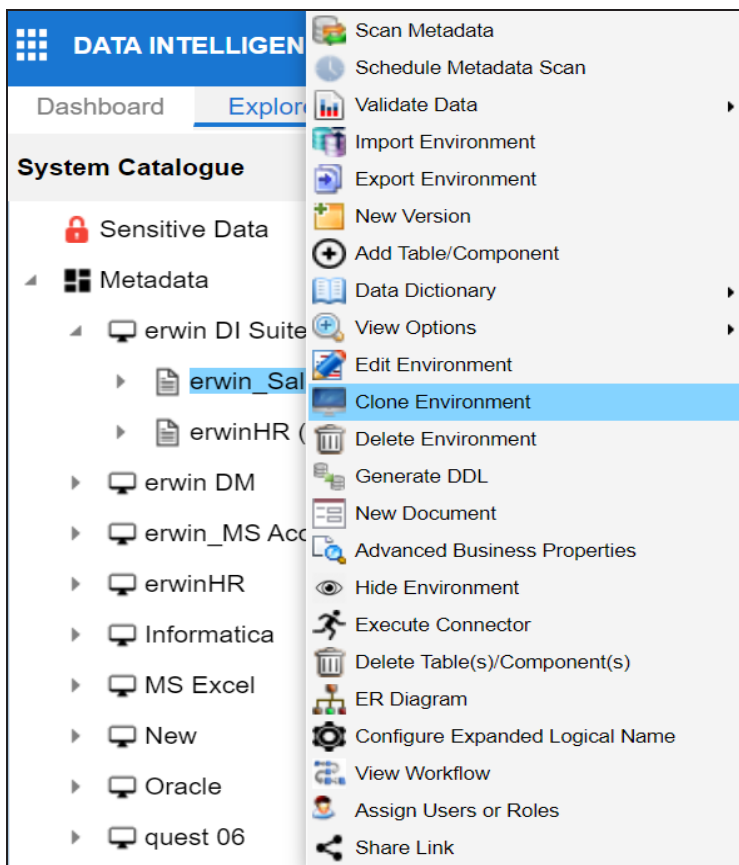

Use this option to delete the document that is not required.

Cloning Environments

You can clone an environment under a system and use the same or different connection parameters in the cloned environment. The cloned environment is saved under the system.

To clone environments, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **Clone Environment**.

The New Environment Cloning page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
System Environment Name	Specifies the unique name of the environment. For example, EDW-Test. For more information on naming conventions, refer to the Best Practices section.
System Environment Type	Specifies the type of the environment. For example, development, test, or production.
Data Steward	Specifies the name of the data steward responsible for the environment. For example, Jane Doe. Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager. To assign data steward, select a data steward from the drop down

Field Name	Description
	options.
Server Platform	Specifies the server platform of the environment. For example, Windows.
Server OS Version	Specifies the OS version of the environment's server.
File Management Type	Specifies the file management system (if the environment is a file-based source). For example, MS Excel.
File Location	Specifies a file path (if the environment is a file-based source). For example, C:\Users\Jane Doe\erwin\Mike - Target System
Production System Name	Specifies the system name being associated with the environment as the production system. For example, Enterprise Data Warehouse.
Version Label	Specifies the version label of the environment to track change history. For example, Alpha. For more information on configuring version display, refer to the Configuring Version Display of the Environments topic.
DQ Score	Specifies the overall data quality score of the environment. For example, High (7-8). For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.
Database Type	<p>Specifies the database type. For example, Sql Server.</p> <p>Select the type of database from where you wish to scan metadata. Depending upon your choice of database type you need to provide additional fields (connection parameters) appearing on the right hand side.</p> <div data-bbox="475 1577 1408 1661" style="background-color: #e6f2ff; padding: 5px;">  There are no additional fields for MS Excel File, and XSD. </div>

5. Click  to test the connection.

If the connection with database is established successfully then a success message pops up.

6. Click .

The environment is cloned and the cloned environment is saved under the system.

Different database types have different prerequisites and connection parameters:

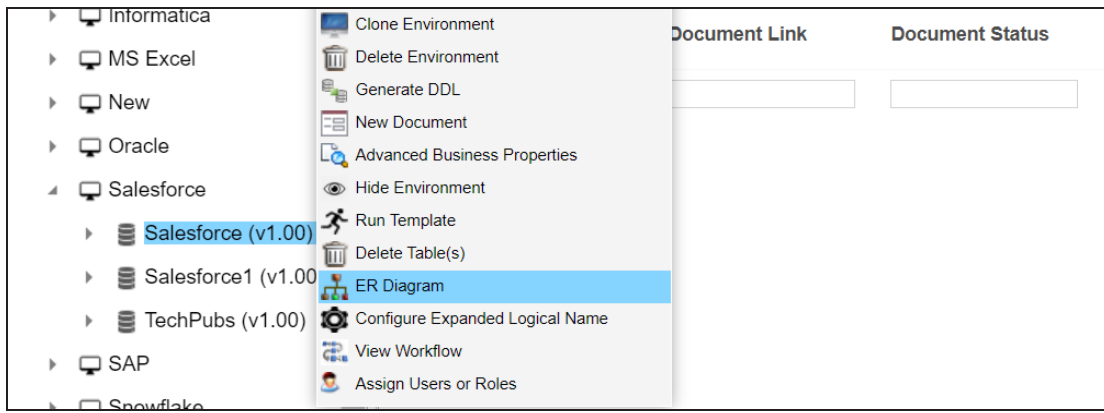

- [SQL Server - via SQL or Window authentication mode](#)
- [Oracle and Oracle RAC](#)
- [MySQL](#)
- [Snowflake](#)
- [MS Dynamics CRM](#)
- [SAP ECC R/3 and IS-U Metadata via JCO Driver](#)

Viewing ER Diagram

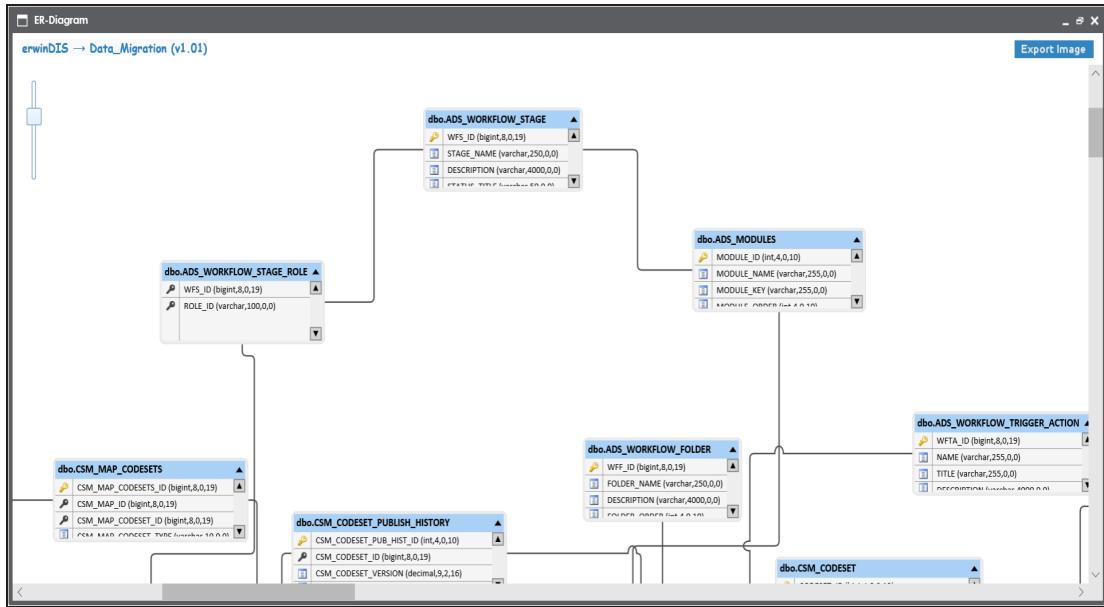

You can view Entity Relationship (ER) diagram after scanning or importing metadata in an environment. You can view ER diagrams at environment level and export it in the JPG format.

To view entity relationship diagram, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **ER Diagram**.

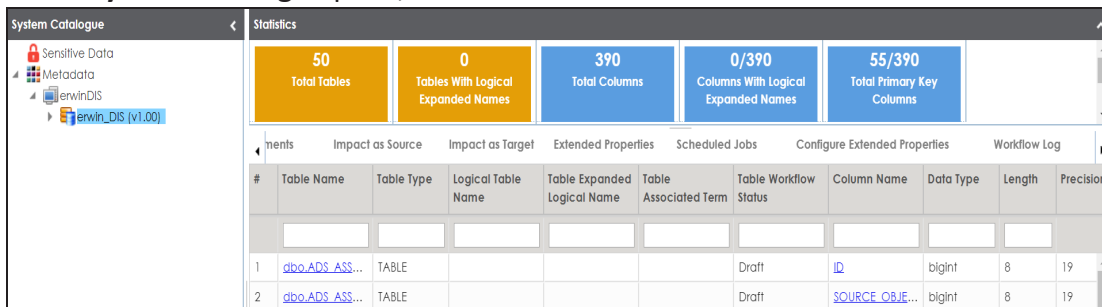

You can download the ER diagram. To download the ER diagram, click **Export Image**.

Viewing Workflow Logs

You can create your own workflow and assign it to a system. A workflow assigned to a system is applicable to all the environments under it. For more information on assigning workflows to environments, refer to the [Managing Metadata Manager Workflows](#) section. You can view workflow logs of environments to know the current stage of environments.

To view workflow logs of environments, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click an environment.

The screenshot shows the 'System Catalogue' interface. On the left, a tree view shows 'Sensitive Data' > 'Metadata' > 'erwinDIS' > 'erwin_DIS (v1.00)'. The main area displays 'Statistics' with five summary cards: 'Total Tables' (50), 'Tables With Logical Expanded Names' (0), 'Total Columns' (390), 'Columns With Logical Expanded Names' (0/390), and 'Total Primary Key Columns' (55/390). Below the statistics is a tabbed interface with 'Workflow Log' selected. The table below has the following data:

#	Table Name	Table Type	Logical Table Name	Table Expanded Logical Name	Table Associated Term	Table Workflow Status	Column Name	Data Type	Length	Precision
1	dbo.ADS_ASS...	TABLE				Draft	ID	bigint	8	19
2	dbo.ADS_ASS...	TABLE				Draft	SOURCE OBJE...	bigint	8	19

3. Click the **Workflow Log** tab.

The workflow log of the environment appears. You can observe that the current workflow stage of the environment blinks in the diagram.

Use the following options:

User Comments (🗨️)

Use this option to view users and the comments entered by the users in each stage.

Expand/Hide Users and Roles

Use this option to view or hide users and roles assigned to the stages of the workflow.

Collapse/Expand Roles

This option is enabled when you are in the Expand Users and Roles view. Use this to switch between the collapsed and expanded roles view.

Collapse/Expand Users

This option is enabled when you are in the Expand Users and Roles view. Use this to switch between the collapsed and expanded users view.

Export Image

Use this option to download the workflow in the JPG format.

Associating Environments

You can associate environments with business assets, systems, environments, tables, and columns. You can view these associations on mind maps and analyze associations.

Ensure that:

- Business assets are enabled. You can add custom business assets and enable them in [Business Glossary Manager Settings](#).
- Relationship between environment and the asset type is defined. You can define associations and relationships in [Business Glossary Manager Settings](#).

To associate environments with asset types, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click an environment.
3. Click the **Associations** tab.
4. In the asset type (business policies, business terms, columns, environments, and tables) list, select an asset type to associate with the environment.

5. Click **+**.

The Relationship Associations page appears. Based on the asset type that you select, it

displays a list of available assets.

Relationship Associations

Current Context: CDM_Model_CommonR
 Current Context Type: Environment
 Relationship Name: Golden Source for
 Search (partial matches):

<input type="checkbox"/>	Term Name	Description	Definition	Catalog Name	Catalog Hierarchy
<input type="checkbox"/>	3 -Hydroxyl End	LEN(D3)	The hydroxyl group that is attached to the 3 carbon atom of the sugar (ribose or deoxyribose) of the terminal nucleotide of a nucleic acid molecule.	Macroeconomics	Monetary Terms → Macroeconomics
<input type="checkbox"/>	3-A Sanitary Standards, Inc. (3-A SSI)		3-A Sanitary Standards, Inc. (3-A SSI) is a non-profit association representing equipment manufacturers, processors, regulatory sanitarians and other		

Records from 1 to 200 of 10237

6. Select **Relationship Name**, and the asset type.
If you know the term name, use the Search (partial matches) field to look up for it.
7. Click **Save**.

The selected terms are associated with the environment and added to the list of associations.

You can define as many associations as required.

Business Term: [dropdown]

Actions	Qualifier Name	Relationship Name	Term Name	Description	Definition	Catalog Name	Catalog Hierarchy
<input type="checkbox"/> + ✎ 🗑		Golden Source for	3 -Hydroxyl End	LEN(D3)	The hydroxyl group that is attached to the 3 carbon atom of the sugar (ribose or deoxyribose) of the terminal nucleotide of a nucleic acid molecule.	Macroeconomics	Monetary Terms → Macroeconomics
<input type="checkbox"/>					3-A Sanitary Standards, Inc. (3-A SSI) is a non-profit association		

Once you have created associations, you can use the following options under the **Actions** column:

Add Association (+)

Use this option to add associations using a qualifier.

Edit Association (✎)

Use this option to edit the association.

Delete Association (🗑)

Use this option to delete the association.

To view mind map, click the **Mindmap** tab. For more information on mind maps, refer to the [Viewing Mind Maps](#) topic.

You can associate multiple assets with an environment and view the associations based on a qualifier view in the mind map. For more information, refer to the [Setting Up Associations Using Qualifiers](#) topic.

Configuring Business Properties

You can configure business properties of all the tables and columns under an environment.

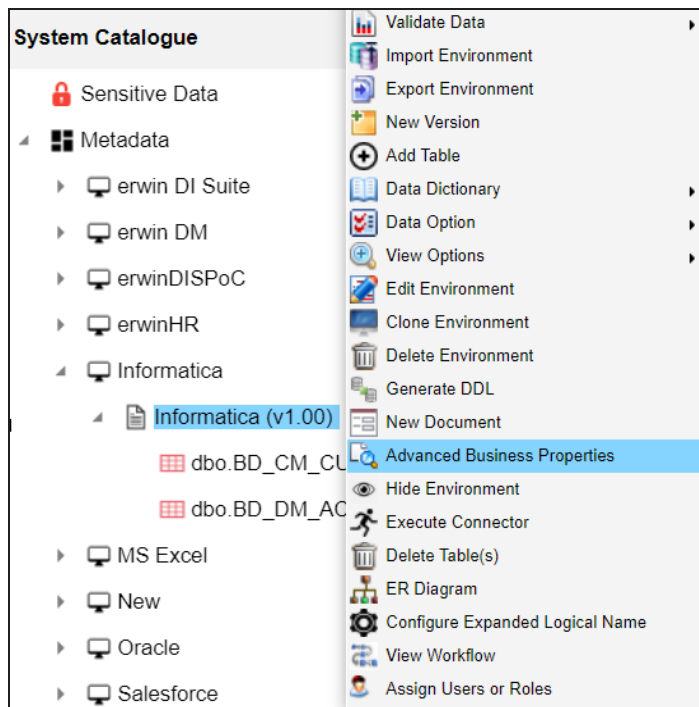

You can also configure business properties at table level and update business properties of a table and business properties of its columns.

You can configure business properties only after importing/scanning metadata into an environment.

To configure business properties at environment level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **Advanced Business Properties**.

The Advanced Business Properties page appears.

Select	System / Environment / Table / Column Name	System Description	Business Purpose	Intended Use	Table Definition	Table Comments	Logical Table Name	Table Class
<input type="checkbox"/>								
<input type="checkbox"/>								
<input type="checkbox"/>	Informatica (1.00)							
<input type="checkbox"/>	dbo.BD_CM_CUSTCARD_							
<input type="checkbox"/>	COD_ACCT_NO							
<input type="checkbox"/>	FLG_DEFAULT							
<input type="checkbox"/>	DAT_LINKED							

4. Double-click cells to enter business properties of tables and columns.

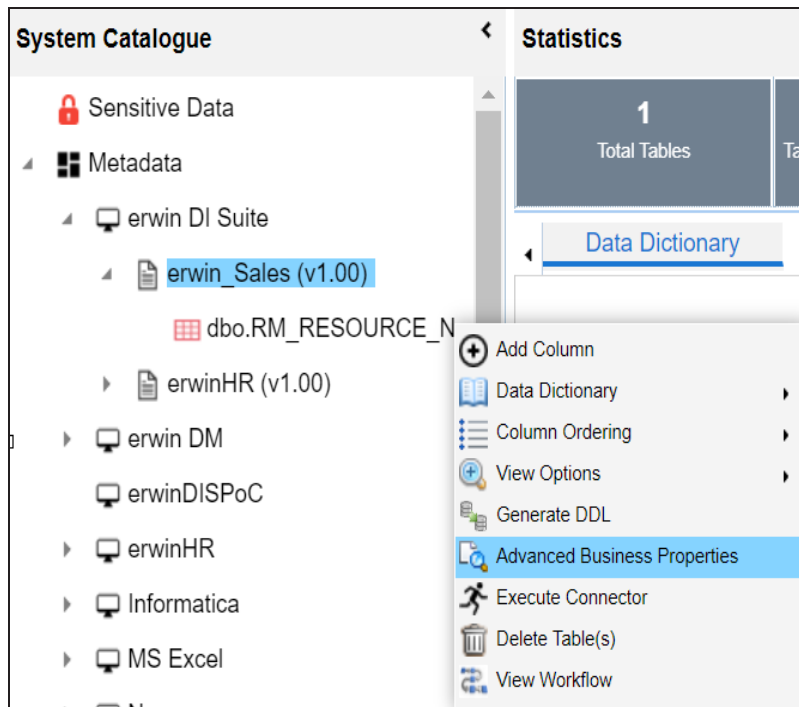

5. Click  to apply changes.

6. Click .

The business properties of all the tables and columns under the environment are updated.

To configure business properties at table level, follow these steps:

1. Under the **System Catalogue** pane, right-click a table.

2. Click **Advanced Business Properties**.

The Advanced Business Properties page appears.

Select	System / Environment / Table / Column Name	System Description	Business Purpose	Intended Use	Table Definition	Table Comments	Logical Table Name	Table Class
<input type="checkbox"/>								
<input type="checkbox"/>								
<input type="checkbox"/>	Informatica (1.00)							
<input type="checkbox"/>	dbo.BD_CM_CUSTCARD_							
<input type="checkbox"/>	COD_ACCT_NO							
<input type="checkbox"/>	FLG_DEFAULT							
<input type="checkbox"/>	DAT_LINKED							

3. Double-click cells to enter table and column properties.

4. Click  to apply changes.

5. Click .

The business properties of the table and its columns are updated.

Configuring Expanded Logical Name

You can update the expanded logical name for multiple tables/columns by scheduling a configuration job. The job updates the expanded logical name based on the table/column name, associated business term's name, and the associated business term's definition.

You should configure expanded logical name of tables and columns after scanning metadata.

You can run the job at both, system and environment levels:

- **System level:** The expanded logical name can be applied to all the tables and columns under the system. This includes all the environments under the system.
- **Environment level:** The expanded logical name can be applied to all the tables and columns under the environment.

For example, consider a scenario where you want to schedule a job to configure the expanded logical name of a table, RM_Resource and a column, Resource_ID. The parameters of the job are a business term catalog that has a business term, Resource, its definition, Sales Representative, and a splitter, Underscore (_). Refer to the following table to understand the parameters and their values:

Entity	Value	Comment
Splitter (specified while scheduling the job)	_(Underscore)	
Table Name	RM_Resource	Here, the part after the underscore (splitter), Resource, matches the Business Term. Therefore, it will be replaced with the business term definition and the part before the underscore, RM, will be retained in the expanded logical name.
Column Name	Resource_ID	Here, the part before the underscore, Resource, matches with the Business Term. Therefore, it will be replaced with the business term definition and the part after the underscore, ID will be retained in the expanded logical name.

Entity	Value	Comment
Business Term	Resource	This should match with a part of the table and column names above.
Business Term Definition	Sales Representative	In the updated expanded logical name, this will replace the part of the table/column name that matches the business term name. That is: <ul style="list-style-type: none"> ▪ For the table, RM will be retained and Resource will be replaced with Sales Representative. ▪ For the column, ID will be retained and Resource will be replaced with Sales Representative.
Expanded Logical Name	<Blank>	Expanded logical name is formed from the business term definition and part of table or column names.

After the job runs successfully, the expanded logical name of the table and column is updated as mentioned in the following table:

Entity	Expanded Logical Name	Comment
Table	RM Sales Representative	Here, RM retained from the table name and Sales Representative is added from business term definition.
Column	Sales Representative ID	Here, ID is retained from the column name and Sales Representative is added from business term definition.

To configure expanded logical name, follow these steps:

1. In the **System Catalogue** pane, right-click a system or environment.
The available options appear.

2. Click **Configure Expanded Logical Name**.

The Configure Expanded Logical Name page appears.

3. Select or enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Catalogs	Select the catalog containing the required business term.
Splitter	Select appropriate splitter based on the table name or column name.
ELN Scope	Select an appropriate scope of the job. <ul style="list-style-type: none"> ▪ Columns: Indicates that the expanded logical names of all the columns in this system are configured ▪ Tables: Indicates that the expanded logical name of all the tables

Field Name	Description
	<p>in this system are configured</p> <ul style="list-style-type: none"> ▪ Both: Indicates that the expanded logical names of all the tables and columns in this system are configured
Job Name	A default job name is autopopulated. You can modify it and enter a job name.
Interval	Select an interval of the job. Interval sets the frequency of the job. For example: If you set the interval every week then the job will be executed every week.
Local or Server	<p>Select the machine whose clock decides the time of the scheduled scan.</p> <ul style="list-style-type: none"> ▪ Local: Refers to your local machine. ▪ Server: Refers to the machine where erwinDIS has been deployed.
Schedule Job On	Select date and time of the execution of the job.
Notify Me	Turn the Notify Me to ON to receive a notification email about the scheduled job.
Notification Email	This field is autopopulated with your email ID. You receive email notifications about the scheduled job from the Admin Email ID, configured in the Email Settings. For more information on configuring Admin Email ID, refer to the Configuring Email Settings topic.
CC List	Enter a comma-separated list of email IDs that should receive the job notification.

4. Click .

The job is scheduled and added to the Scheduled Jobs list on the **Scheduled Jobs** tab.

Dashboard [Explore](#)

You can use this job to update the expanded logical name only once. Alternately, you can update expanded logical names under [table properties](#) and [column properties](#).

Scanning and Managing Metadata

You can scan source and target metadata from different databases, data models, or flat files etc. Ensure that you create an appropriate environment depending on the database type. For example, if you want to scan metadata from SQL Server, then you should create the SQL Server environment.

The metadata scan adds data dictionary, table properties, and column properties that can be validated and updated. You can enrich your metadata by assigning codesets to columns as valid values. Tables and columns can be associated with business and technical assets and these associations can be viewed on a mind map. You can also assign workflows to tables and columns using the Workflow Manager and view workflow logs.

Scanning and managing metadata involves:

- [Scanning metadata from data sources](#)
- [Adding tables](#)
- [Adding Columns](#)
- [Deleting tables and columns](#)
- [Scheduling metadata scans](#)
- [Updating table properties](#)
- [Updating column properties](#)
- [Validating data](#)
- [Assigning codesets to columns](#)
- [Viewing workflow logs of tables](#)
- [Viewing workflow logs of columns](#)
- [Associating tables](#)
- [Associating columns](#)

Scanning Metadata

After creating systems and environments, the next logical step is to scan source and target metadata. Ensure that the environment database type and connection parameters are correct and the environment is able to establish connection with the database.

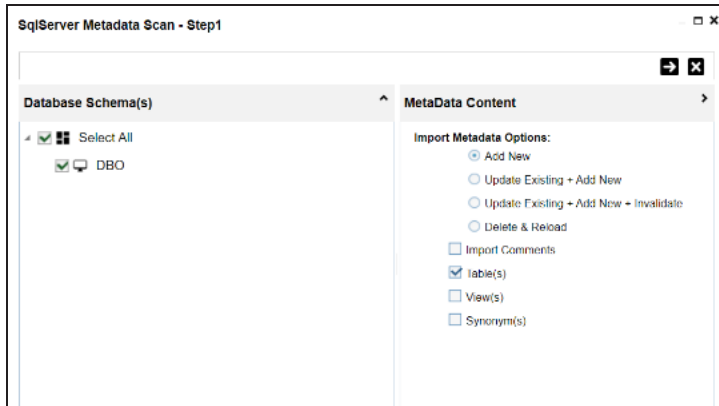

To scan source or target metadata, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click the required environment.

3. Click **Scan Metadata**.

The <Data_Base> Metadata Scan-Step1 page appears. For example, if it is the SQL Server environment, then the SqlServer Metadata Scan - Step1 page appears.

4. In the **Database Schema(s)** pane, select the database schemas.
5. In the **Metadata Content** pane, select the appropriate **Import Metadata Options**.

Refer to the following table for the descriptions of the metadata import options.

Import Metadata Options	Description
Add New	This option adds new objects to the existing object list. The existing metadata is not updated.
Update Existing + Add New	This option adds new objects to the existing list and at the same time the existing metadata is also updated.
Update Existing + Add New + Invalidate	This option adds new objects to the existing list, updates existing and invalidates table/column during the scanning process.
Delete & Reload	This option deletes all existing metadata and scans only the new objects that have been selected.
Import Comments	Select the check box to import comments.
Table(s)	Select the check box to import Tables.
View(s)	Select the check box to import Views.
Synonym(s)	Select the check box to import Synonyms.

6. Click .

The <Database_Name> Metadata Scan Step-2 page appears. It pulls up the objects selected in Metadata Scan Step-1, such as Tables, Views and Synonyms.

7. Select the required objects.

8. Click .

The metadata is scanned successfully and saved under the environment node.

You can also import metadata from:

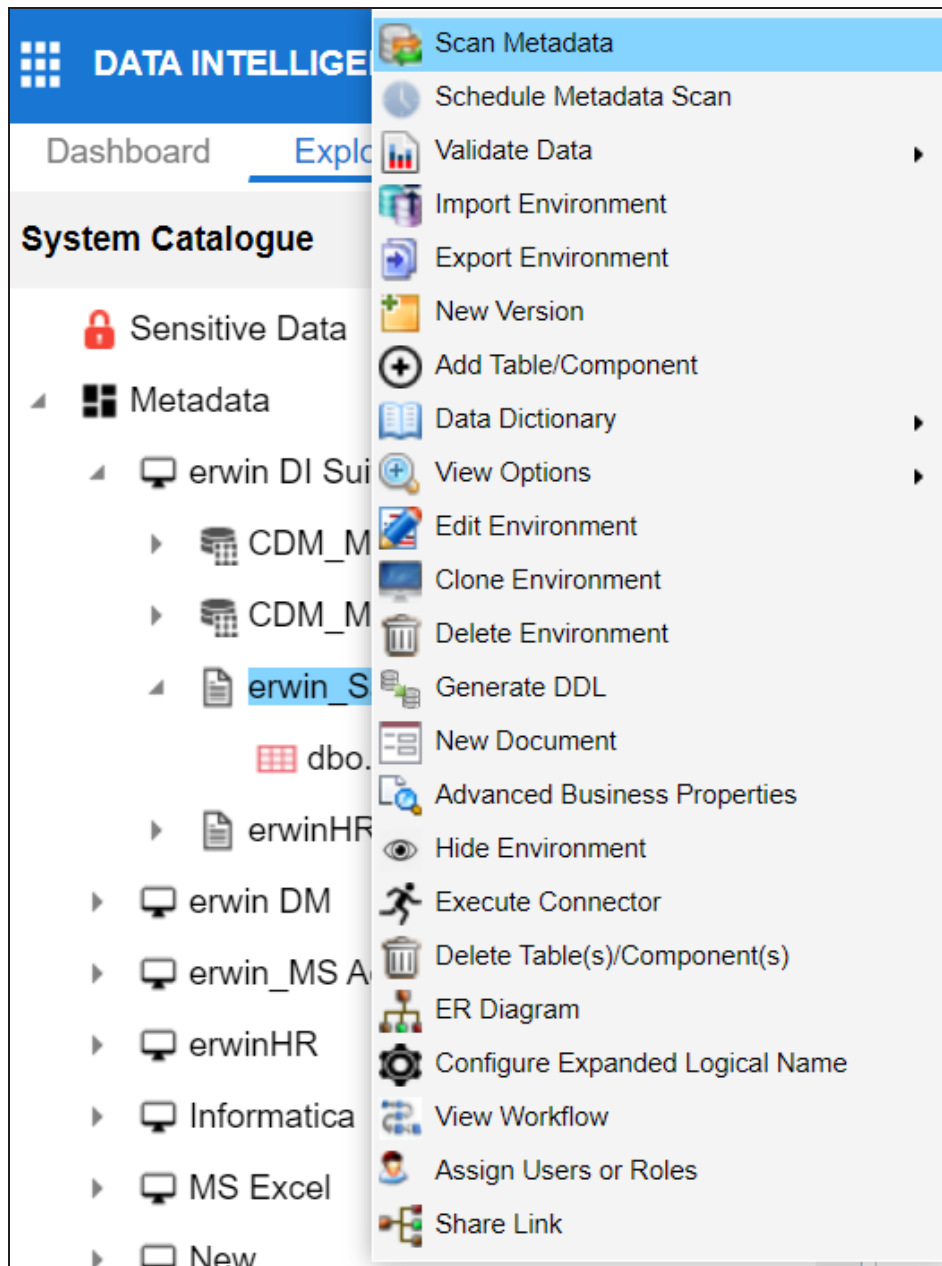

- [MS Excel File](#)
- [JSON](#)
- [CSV \(Flat File\)](#)
- [XMI](#)
- [MS Access File](#)
- [XSD](#)

MS Excel

You can import metadata from MS Excel files into an MS Excel environment.

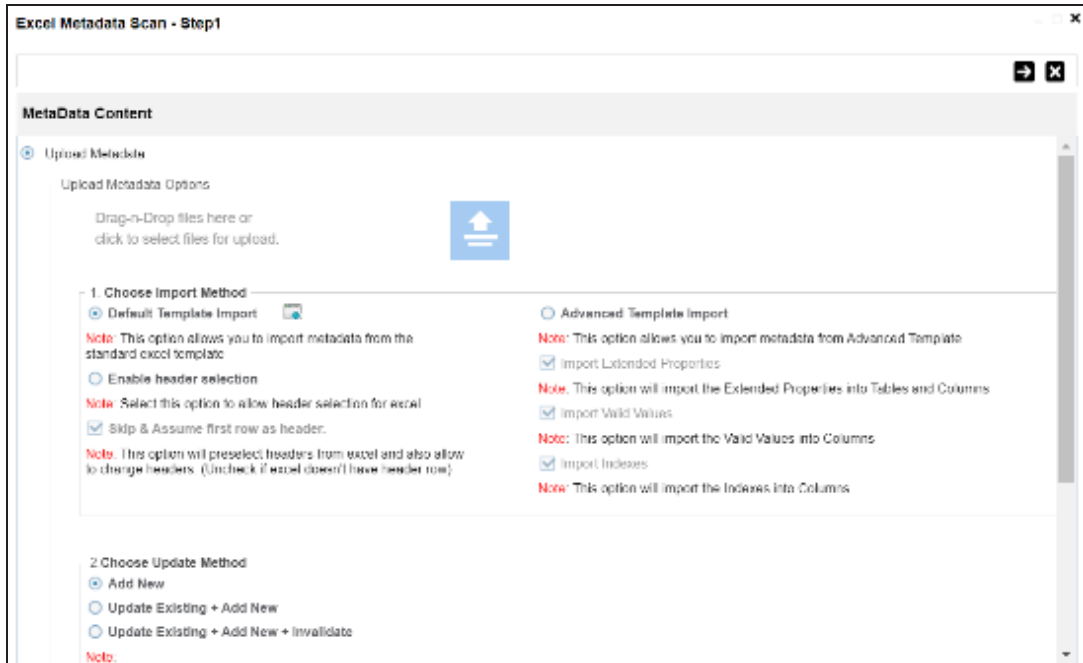

To import metadata from MS Excel files, follow these steps:

1. In the **System Catalogue** pane, right-click an MS Excel environment.

2. Click **Scan Metadata**.

The Excel Metadata Scan - Step1 page appears.

3. Drag and drop or use  to browse and select the MS Excel file.
4. Use the following Method options to import metadata.

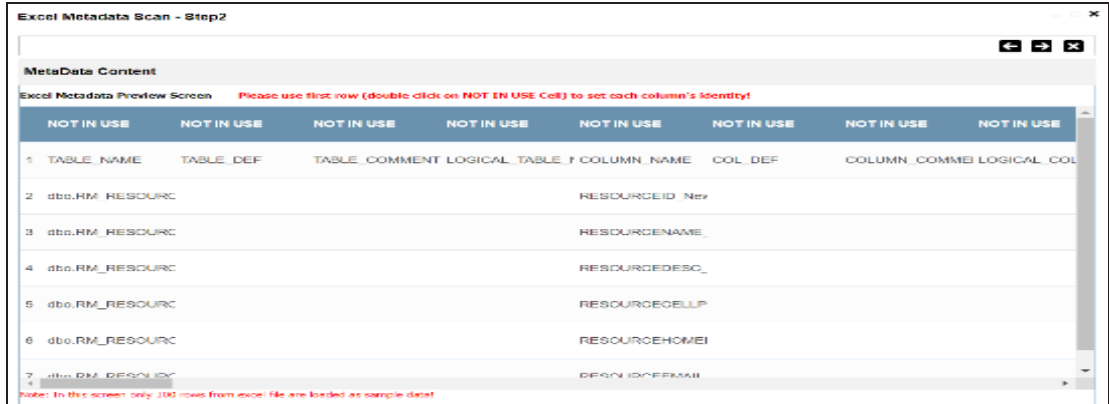

Default Template Import

Use this option to import metadata from the standard Excel template. To download the standard excel template, click .

Enable header selection

Use this option to allow header selection for the Excel file. Click **Enable header selection** and click .

The Excel Metadata Scan - Step2 page appears.

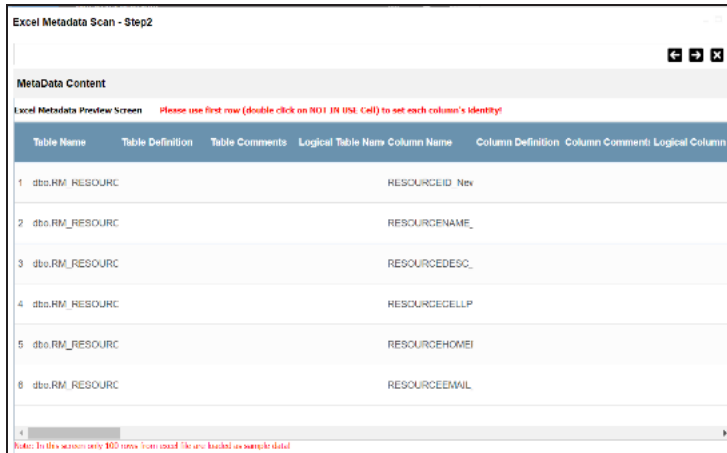

To select headers, on the **Excel Metadata Scan - Step2** page, double-click the **NOT IN USE** cell.

Skip & Assume first row as header

You can use this option only when you click Enable header selection. Use this option to select the first row in the Excel file as headers.

Select the **Skip & Assume first row as header** check box and click .

The Excel Metadata Scan - Step2 page appears. The first row in the Excel file appears as headers.

To select alternate headers, double-click the header cell.

Advance Template Import

Use this option to import metadata from an advanced template. You can use the following import options with the advance template:

Import Extended Properties:

Use this option to import the extended properties into tables and columns.

Import Valid Values:

Use this option to import valid values into columns.

Import Indexes:

Use this option to import the indexes into columns.

5. Use the following update options.

Add New

Use this option to insert new metadata.

Update Existing + Add New

Use this option to update the existing metadata based on tables and columns in the Excel file.

Update Existing + Add New + Invalidate

Use this option to update the existing metadata without deleting it.

Delete & Reload

Use this option to delete all the business properties and data dictionary stored as metadata for this environment.

6. Click .

The Excel Metadata Scan - Step2 page appears.

7. Select the required schema and tables.

8. Click .

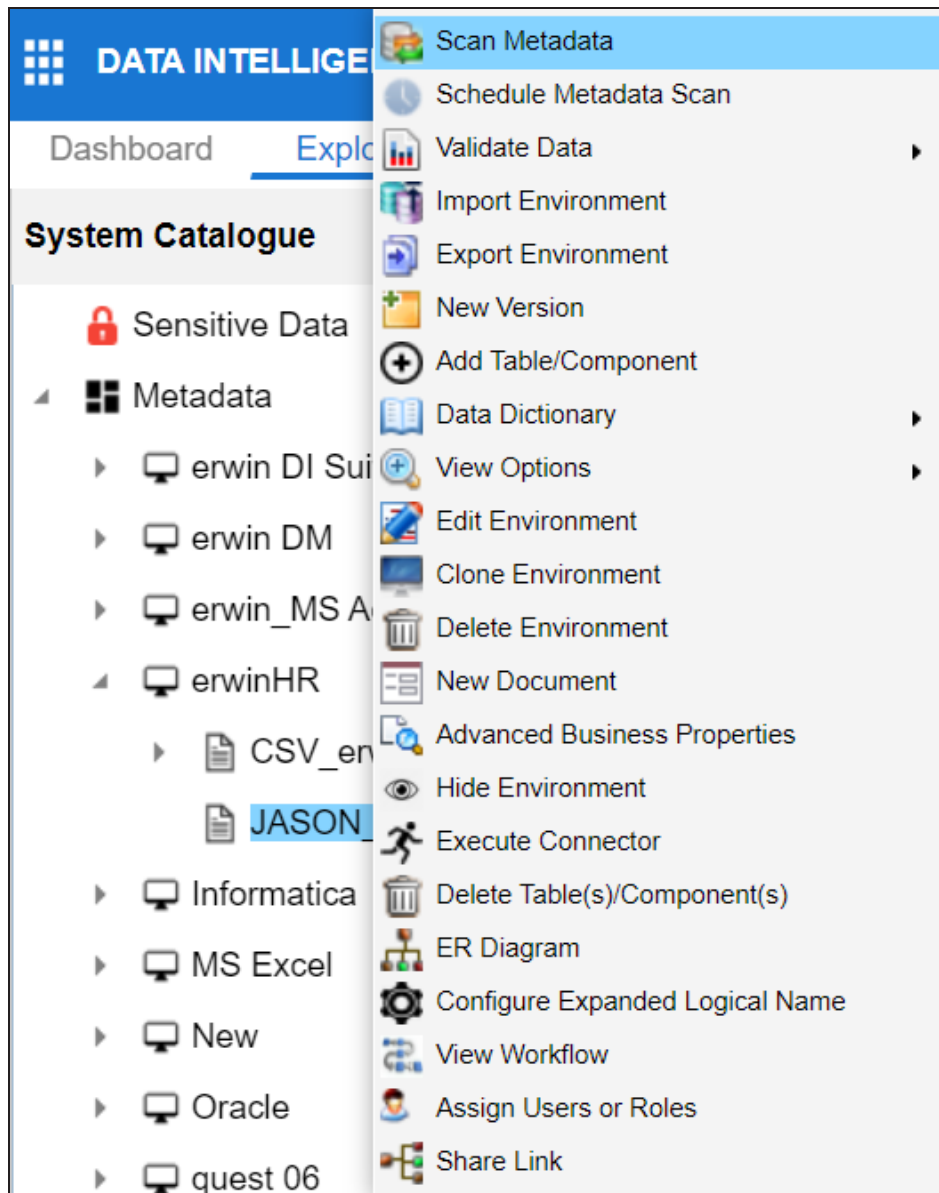

The metadata is imported and saved in the environment.

JSON

You can import metadata from JSON files into a JSON environment.

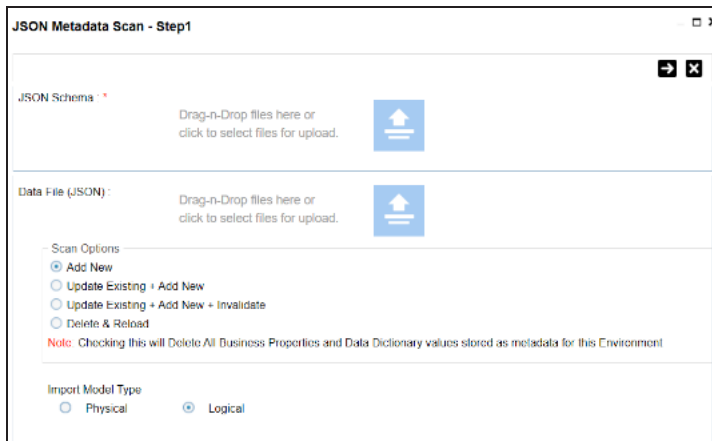

To import metadata from JSON files, follow these steps:

1. In the **System Catalogue** pane, right-click a JSON environment.

2. Click **Scan Metadata**.

The JSON Metadata Scan - Step1 page appears.

3. Under the **JSON Schema** section, drag and drop or use  to browse and select the JSON schema file.
4. Under the **Data File [JSON]** section, drag and drop or use  to browse and select the JSON data file.
5. Use the following scan options:

Add New

Use this option to insert new metadata into the environment.

Update Existing + Add New

Use this option to update the existing metadata based on tables and columns in the JSON file.

Update Existing + Add New + Invalidate

Use this option to update the existing metadata without deleting it.

Delete & Reload

Use this option to delete all the business properties and data dictionary stored as metadata for this environment.

6. Click the appropriate **Import Model Type**.

7. Click .

The JSON Metadata Scan - Step2 page appears.

8. Select the required schema and tables.

9. Click .

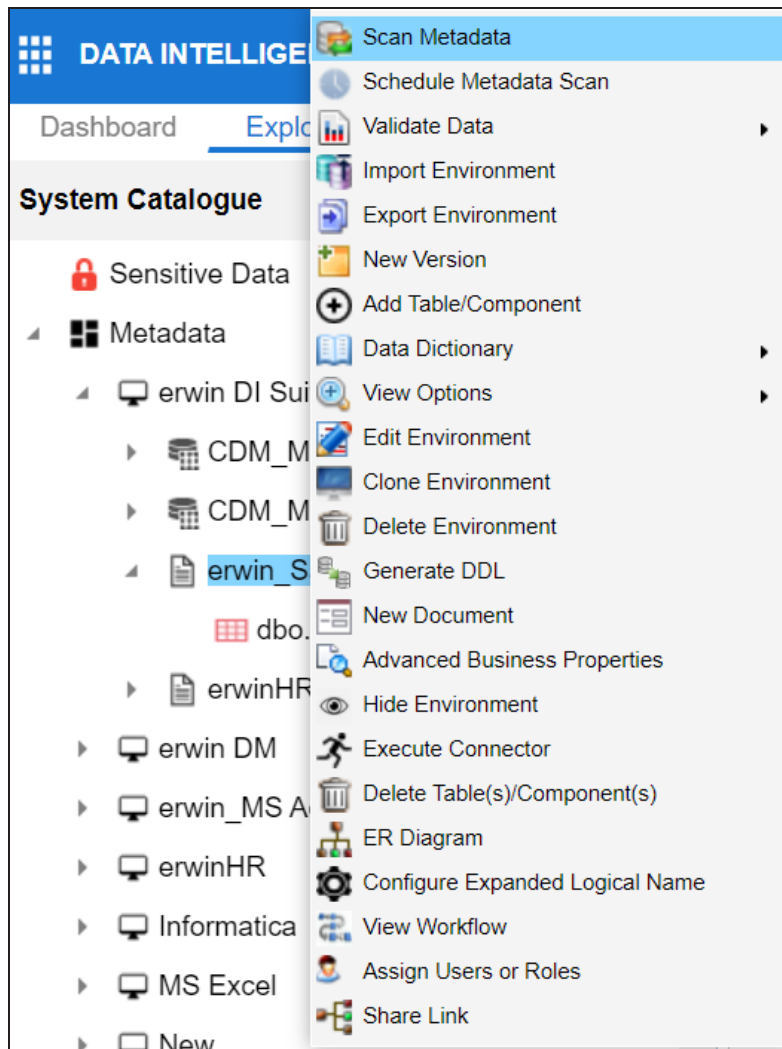

The metadata is imported and saved in the environment.

CSV

You can import metadata from CSV files into a CSV environment.

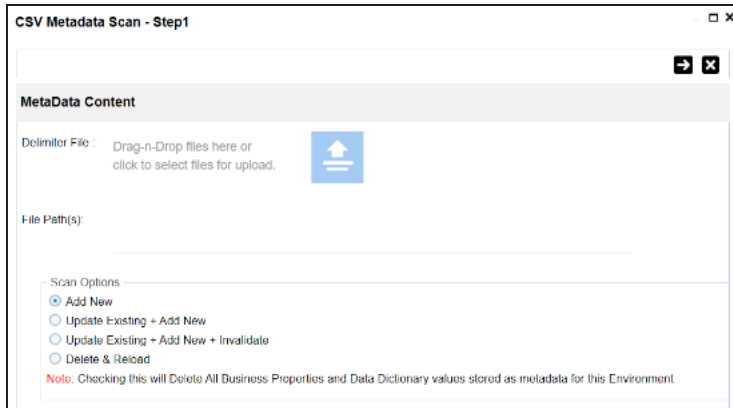

To import metadata from CSV files, follow these steps:

1. In the **System Catalogue** pane, right-click a CSV environment.

2. Click **Scan Metadata**.

The CSV Metadata Scan - Step1 page appears.

3. Drag and drop or use  to browse and select the delimiter file.
4. In the **File Path(s)** box, enter the file path.
5. Use the following scan options:

Add New

Use this option to insert new metadata into the environment.

Update Existing + Add New

Use this option to update the existing metadata based on table and columns in the CSV file.

Update Existing + Add New + Invalidate

Use this option to update the existing metadata without deleting it.

Delete & Reload

Use this option to delete all the business properties and data dictionary stored as metadata for this environment.

6. Click .

The CSV Metadata Scan - Step2 page appears.

7. Select the required tables.

8. Click .

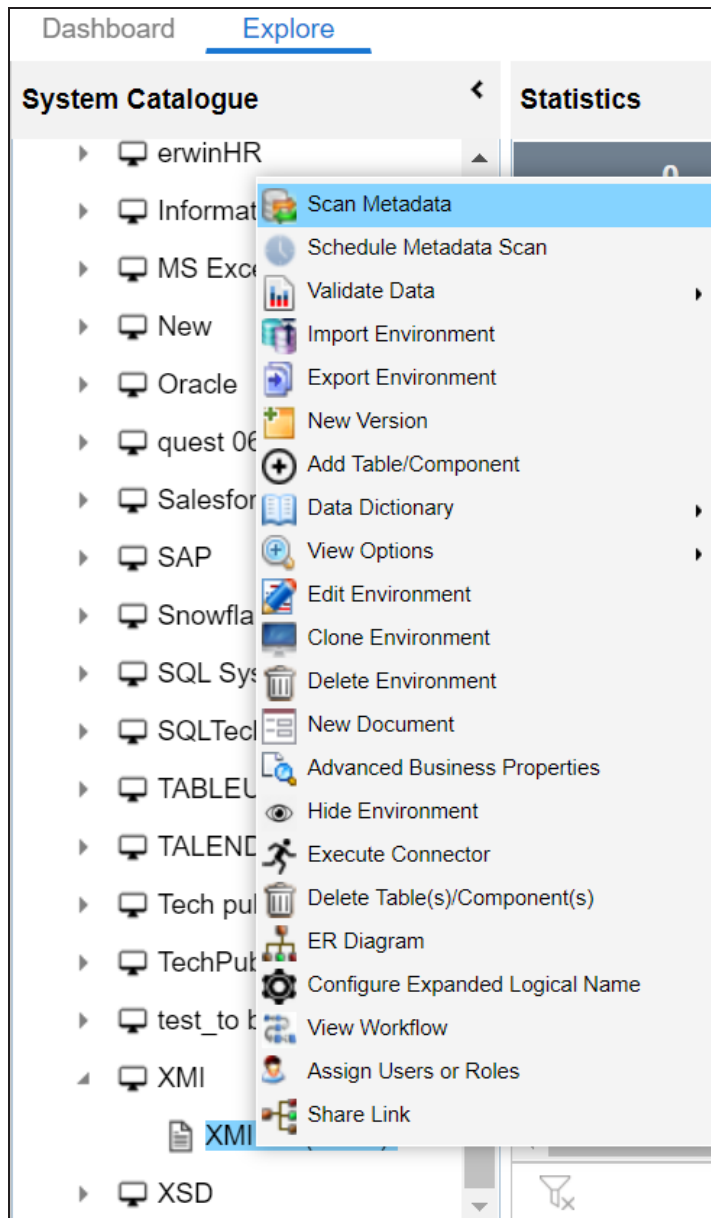

The metadata is imported and saved in the environment.

XMI

You can import metadata from XMI files into a XMI environment.

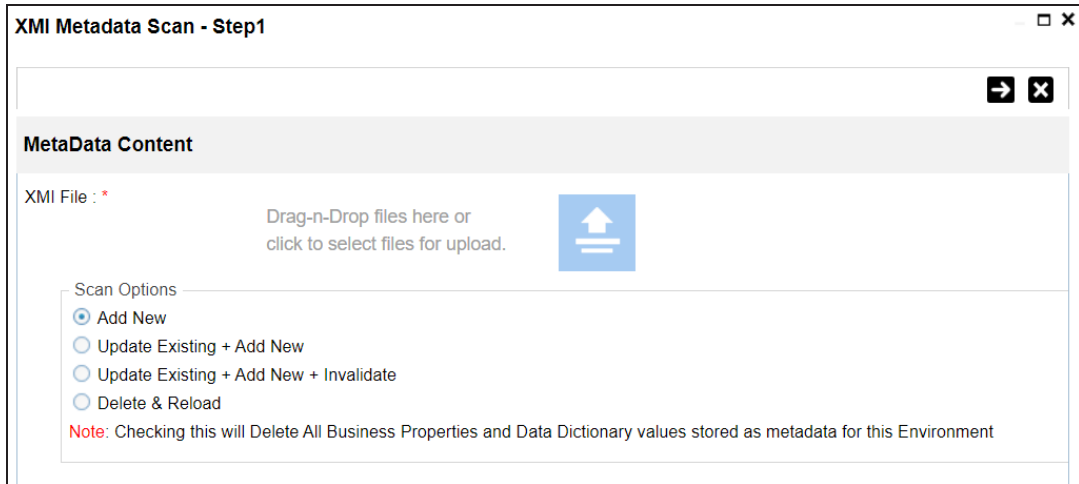

To import metadata from XMI files, follow these steps:

1. In the **System Catalogue** pane, right-click a XMI environment.

2. Click **Scan Metadata**.

The XMI Metadata Scan - Step1 page appears.

3. Drag and drop or use  to browse and select the XMI file.

4. Use the following scan options:

Add New

Use this option to insert new metadata into the environment.

Update Existing + Add New

Use this option to update the existing metadata based on tables and columns in the XMI file.

Update Existing + Add New + Invalidate

Use this option to update the existing metadata without deleting it.

Delete & Reload

Use this option to delete all the business properties and data dictionary stored as metadata for this environment.

5. Click .

The XMI Metadata Scan - Step2 page appears.

6. Select the required tables.

7. Click .

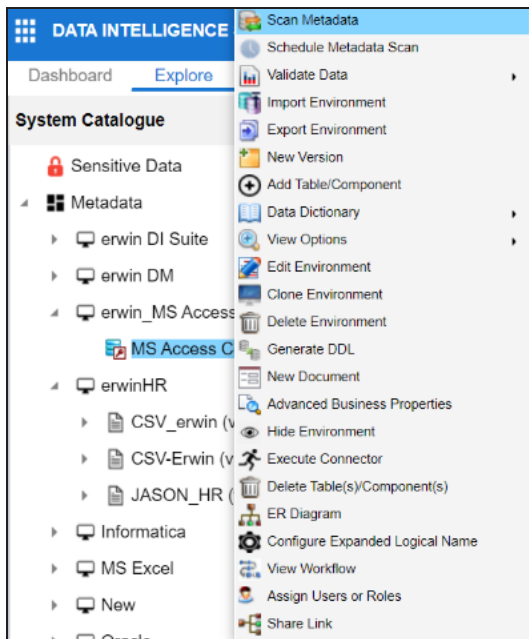

The metadata is imported and saved in the environment.

MS Access File

You can import metadata from MS Access files into a MS Access environment.

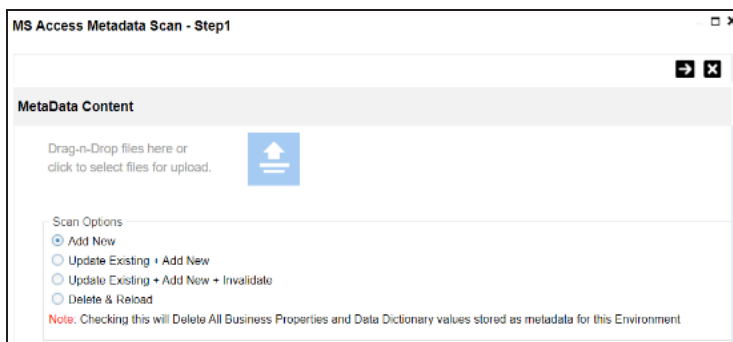

To import metadata from MS Access files, follow these steps:

1. In the **System Catalogue** pane, right-click a MS Access environment.

2. Click **Scan Metadata**.

The MS Access Metadata Scan - Step1 page appears.

3. Drag and drop or use  to browse and select the MS Access file.
4. Use the following scan options:

Add New

Use this option to insert new metadata into the environment.

Update Existing + Add New

Use this option to update the existing metadata based on tables and columns in the MS Access file.

Update Existing + Add New + Invalidate

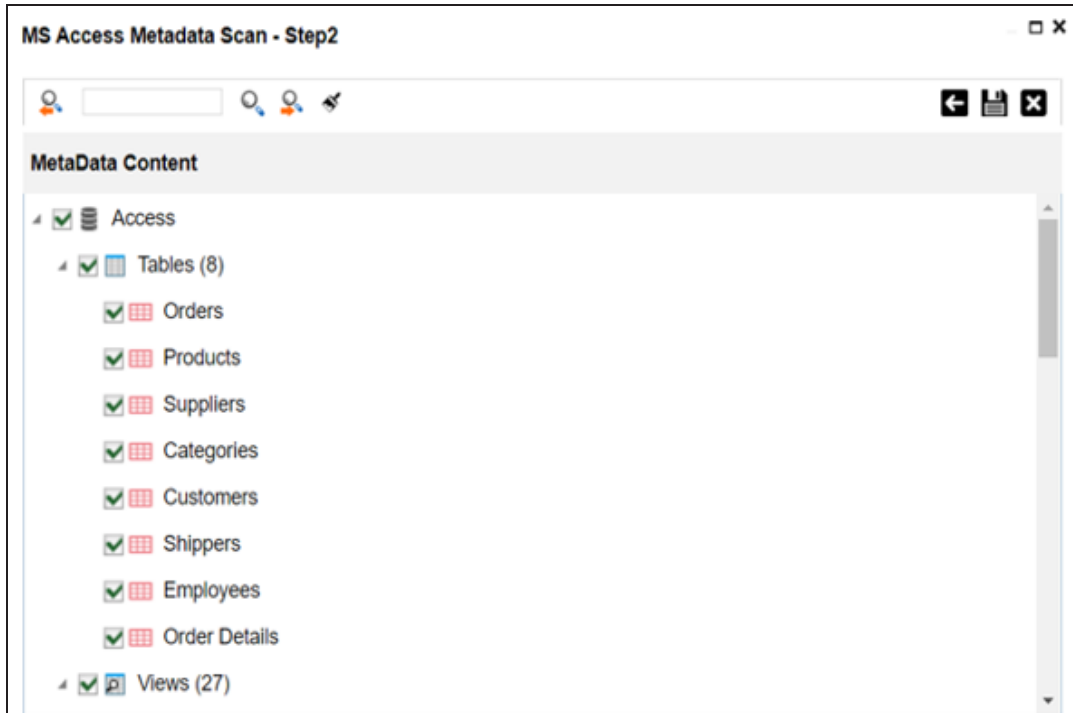

Use this option to update the existing metadata without deleting it.

Delete & Reload

Use this option to delete all the business properties and data dictionary stored as metadata for this environment.

5. Click .

The MS Access Metadata Scan - Step2 page appears.

6. Select the required tables.

7. Click .

The metadata is imported and saved in the environment.

XSD

You can import metadata from XSD files into XSD environments.

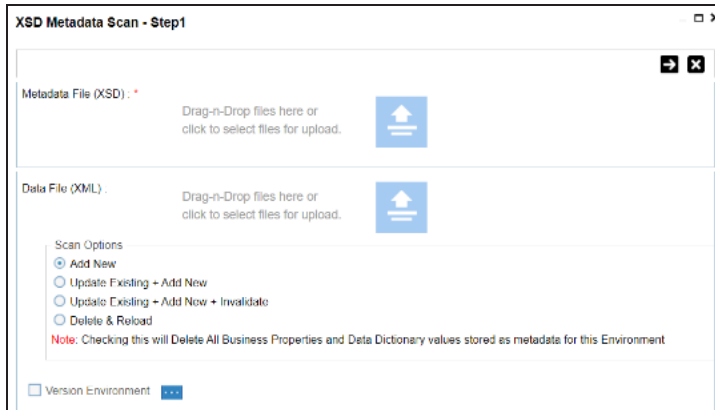

To import metadata from XSD files, follow these steps:

1. In the **System Catalogue** pane, right-click a XSD environment.

2. Click **Scan Metadata**.

The XSD Metadata Scan - Step1 page appears.

3. Under the **Metadata File [XSD]** section, use  to browse or drag and drop the metadata file with .xsd extension.
4. Under the **Data File [XML]** section, use  to browse or drag and drop the data file with .xml extension.
5. Use the following scan options:

Add New

Use this option to insert new metadata into the environment.

Update Existing + Add New

Use this option to update the existing metadata based on tables and columns in the XSD file.

Update Existing + Add New + Invalidate

Use this option to update the existing metadata without deleting it.

Delete & Reload

Use this option to delete all the business properties and data dictionary stored as metadata for this environment.

6. Click .

The XSD Metadata Scan - Step2 page appears.

7. Select the required tables.

8. Click .

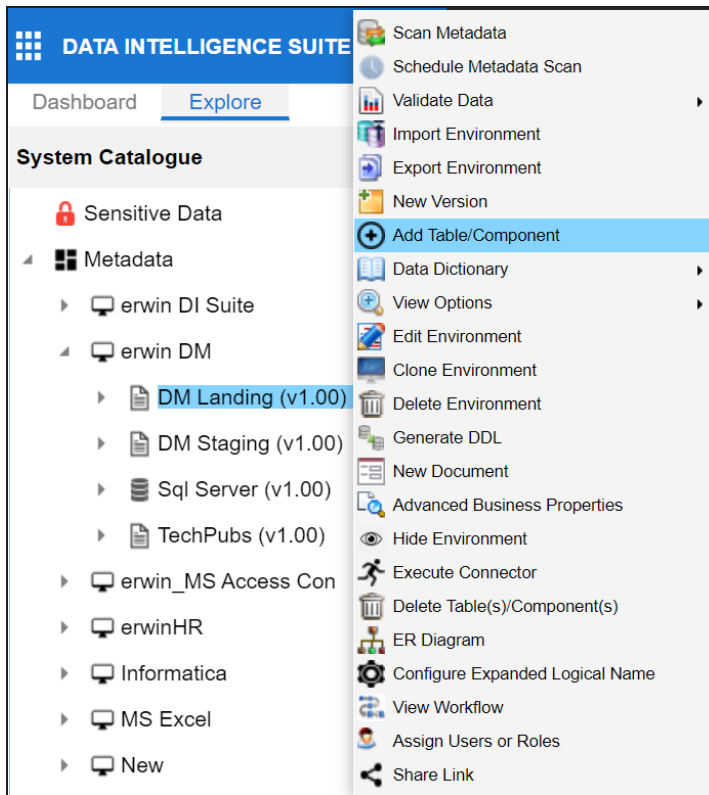

The metadata is imported and saved in the environment.

Adding Tables

You can add tables in an environment manually and define their technical and business properties. You can also use User-Defined Fields to define additional properties of a table. UI labels of the User-Defined fields can be configured in [Language Settings](#).

To add tables, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **Add Table/Component**.

The Add New Table page appears.

Add New Table

4. Enter or select appropriate values in the fields. Refer to the following table for field description.

Field Name	Sub-Field	Description
Schema Name		Specifies the schema name of the table. For example, dbo.
Technical Properties	Name	Specifies the physical name of the table. For example, Account or Currency.
	System Name	Specifies the physical name of the system under which the table exists. For example, Enterprise Data Warehouse. You cannot edit this field.
	Synonym Reference	Specifies the synonym reference of the table. For example, Sales_Rep_Information. This field is autopopulated during the metadadata scan. You

Field Name	Sub-Field	Description
		cannot enter it manually.
	Entity Type	Specifies the entity type of the new component. It is auto-populated with Table .
	Environment Name	Specifies the physical name of the environment under which the table exists. For example, EDW-Test. You cannot edit this field.
	No of Rows	Specifies the total number of rows in the table. For example, 100.
	File Type	Specifies the file type of the table if the table is in a file-based environment.
Business Properties	Data Steward	Specifies the name of the data steward responsible for the table. For example, Jane Doe. Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager. To assign data steward, select a data steward from the drop down options.
	Definition	Specifies the definition of the table. For example: The table contains five columns with emp ID column as the primary key.
	Comments	Specifies comments about the table. For example: The table contains details of the employees.
	Class	Specifies the table class property. For more information on configuring table class, refer to Configuring Table and Column Class topic.
	DQ Score	Specifies the overall data quality score of the table. For example, High (7-8).

Field Name	Sub-Field	Description
		For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.
	Logical Table Name	Specifies the logical name of the table. For example, if the physical name of a table is DIM_Customer, then the logical name of the table is Customer Dimension.
	Expanded Logical Name	Specifies the expanded logical name of the table. For example, if the physical name of a table is RM_Resource, then the expanded logical name of the table is RM Sales Representative. You can configure expanded logical name of tables in bulk at system and environment level.
	JSON Physical Name	Specifies the JSON physical name of the table if the table is in a JSON environment. For example, account.
	Used in Gap Analysis	Specifies whether the table is being used as part of a gap analysis to check table usage in mappings. Select the check box if the table is used in gap analysis. For more information on performing table gap analysis, refer to the Performing Table Gap Analysis topic.
	Sensitive Data Indicator (SDI) Flag	Specifies whether the table is sensitive. Switch Sensitive Data Indicator (SDI) Flag to  to mark the table sensitive.
	Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the table. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . For more information on configuring SDI classifications, refer to the Configuring Sensitive Data Indic-

Field Name	Sub-Field	Description
		ator Classifications topic.
	Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . The field autopopulates based on the SDI classification.
	Alias	Specifies the alias name of the table. For example, Sales_Representative_Table.

5. Click .

The table is added to the environment.

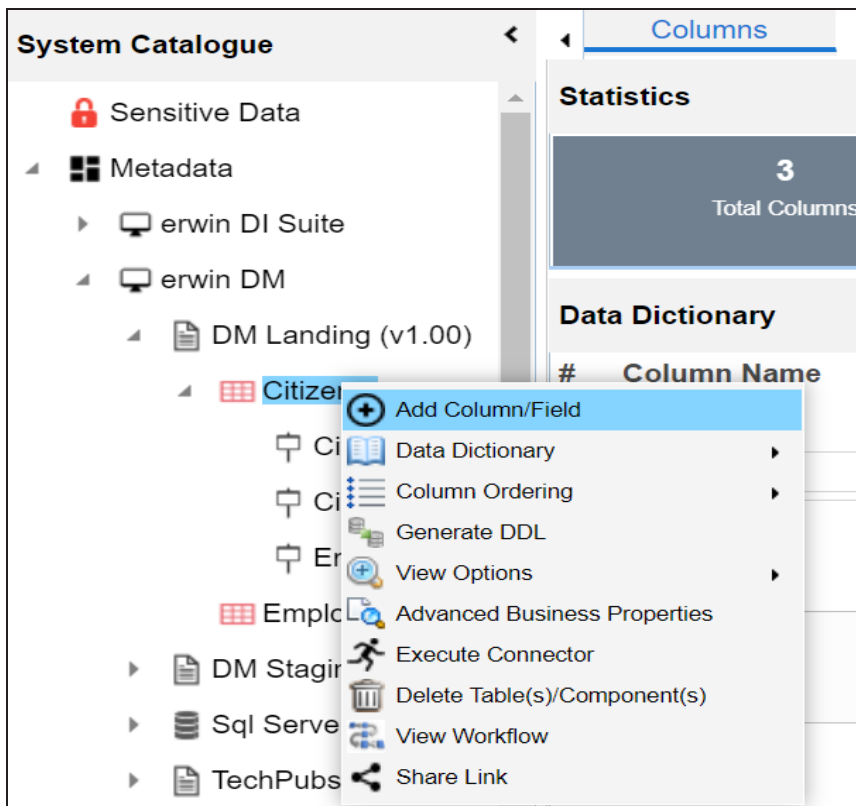

Adding Columns

You can add columns in a table manually and enter technical and business properties of a column. You can also use user defined fields to enter additional properties of the column. UI labels of user defined fields can be configured in [Language Settings](#).

To add columns in tables manually, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click a table.

The available options appear.

3. Click **Add Column/Field**.

The Add New Column page appears.

Add New Column

4. Enter or select appropriate values in the fields. Refer to the following table for field description.

Field Name	Sub-Field	Description
Technical Properties	Name	Specifies the physical name of the column. For example, Object_ID.
	Data Domain	Specifies the data domain values for the column. For example, data domain of a Gender column is M and F.
	Precision	Specifies the precision of the column. For example: 5, the number 123.45 has a precision of 5 and a scale of 2.
	DB Default Value	Specifies the default value of the column in the database. For example, True.
	Nullable Flag	Specifies whether the column allows null values. Select the check box if the column allows null values.

Field Name	Sub-Field	Description
	Natural Key Flag	Specifies whether the column is a natural key. Select the check box if the column is a natural key.
	Foreign Key Flag	Specifies whether the column is a foreign key. Select the check box if the column is a foreign key.
	Foreign Key Column Name	Specifies the actual column name where the column is listed as a PK (in case the current column being an FK). For example, ID.
	Minimum Value	Specifies the minimum value of the column. For example, minimum value of ID column can be 424.
	File Starting Position	Specifies the starting position in the file.
	Attribute Type	Specifies the attribute type of the new component. It is auto-populated with Column .
	Data Type	Specifies the physical data type of the column. For example, varchar.
	Storage Type	Specifies the storage type of the column. For example, row store/column store in the case of SAP systems.
	Length	Specifies the physical length of the column. For example, if the column datatype is char(5), then its physical length is 5.
	Scale	Specifies the physical scale of the column. For example: The number 123.45 has a precision of 5 and a scale of 2.
	Identity Flag	Specifies whether the column is used as an identity flag. Select the check box if the column is used as an identity flag.
	Percent Null Value	Specifies the percentage of null values in the column. For example, 10%.

Field Name	Sub-Field	Description
	Primary Key Flag	Specifies whether the column is a primary key. Select the check box if the column is used as the primary key.
	Foreign Key Table Name	Specifies the actual table name where the column is listed as a PK (in case of the current column being an FK).
	ETL Default Value	Specifies the default ETL value of the column during the load process.
	Maximum Value	Specifies the maximum value of the column. For example, maximum value of ID column can be 1503.
Business Properties	Data Steward	Specifies the data steward responsible for the column. For example, Jane Doe. Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager. To assign data steward, select a data steward from the drop down options.
	Definition	Specifies the definition of the column. For example: The column is a primary key that allows 5 alpha-numeric characters.
	Comments	Specifies the comments about the column. For example: The column provides unique identification of employee in the employee table.
	Sensitive Data Indicator (SDI) Flag	Specifies whether the column is sensitive. Switch Sensitive Data Indicator (SDI) Flag to  to mark the column sensitive.
	Sensitive Data Indicator (SDI)	Specifies the SDI classification of the column. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag

Field Name	Sub-Field	Description
	Classification	is switched to  . For more information on configuring SDI classifications, refer to the Configuring Sensitive Data Indicator Classifications topic.
	Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . The field autopopulates based on the SDI classification.
	Class	Specifies the column class property. Select a column class. For more information on configuring column class, refer to the Configuring Table and Column Class topic.
	DQ Score	Specifies the overall data quality score of the column. For example, High (7-8). For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.
	Logical Name	Specifies the logical name of the column. For example, if the physical name of the table is CUST_ID_NUM, then the logical name of the table is Customer Identification Number.
	Expanded Logical Name	Specifies the expanded logical name of the column. For example, if the physical name of the column is Resource_ID, then the logical name of the . You can also configure expanded logical name of columns in bulk at system and environment level.
	JSON Physical Column Name	Specifies the JSON physical name of the column if the column is in a JSON environment. For example, objectID.
	Used in Gap	Specifies whether the column is being used in a gap analysis

Field Name	Sub-Field	Description
	Analysis	for usage in mappings. Select the check box if the column is used in the gap analysis. For more information on performing column gap analysis, refer to the Performing Column Gap Analysis topic.
	Alias	Specifies the alias name of the column. For example, Resource_ID.
	Business Key Flag	Specifies whether the column is a business key. Select the check box if the column is a business key.

5. Click .

The column is added to the table.

Deleting Tables and Columns

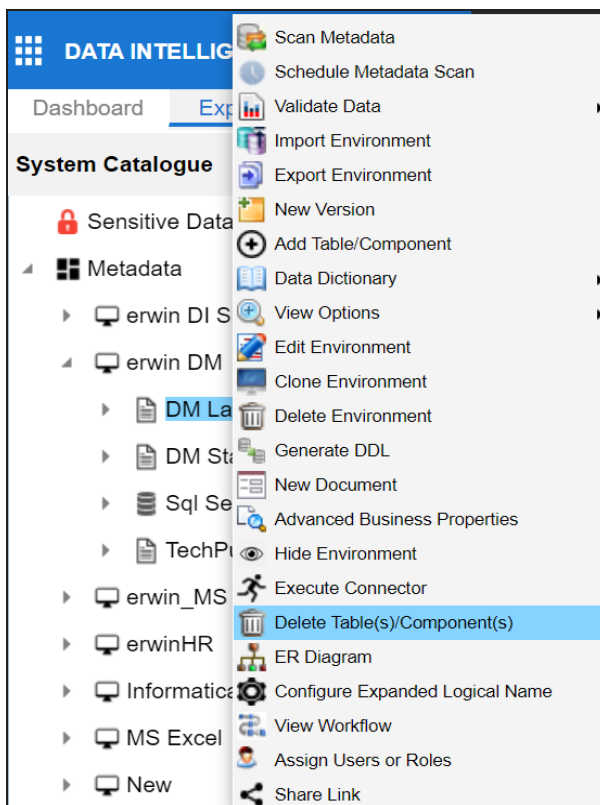

You can delete tables and columns that are not required.

Tables

To delete tables from environments, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

The available options appear.

3. Click **Delete Table(s)/Components**.

The Delete Tables page appears.

4. Select the required tables.

5. Click .

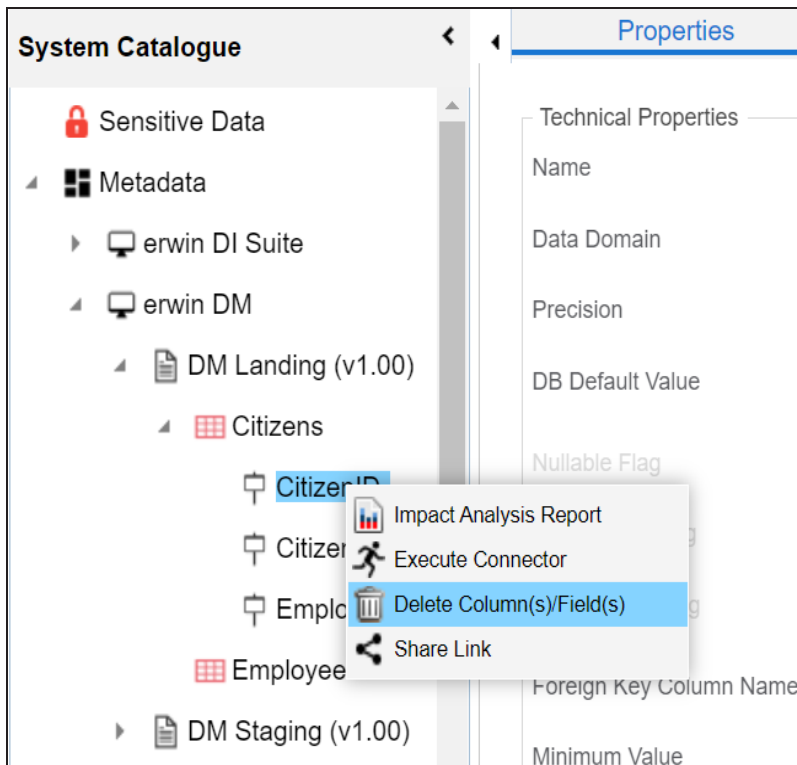

The selected tables are deleted from the environment.

Columns

To delete columns from tables, follow these steps:

1. In the **System Catalogue**, right-click a column.

The available options appear.

2. Click **Delete Column(s)/Fields**.

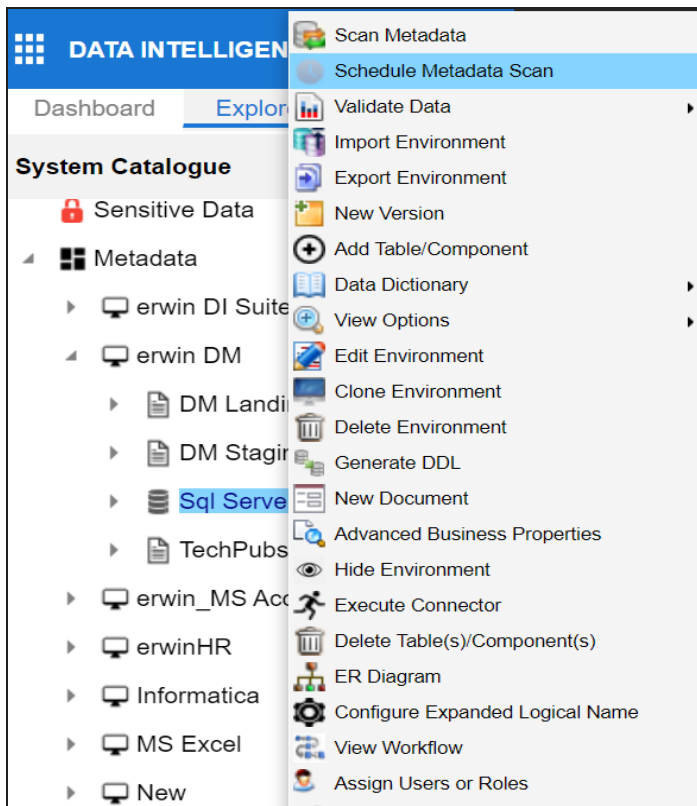

The column is deleted.

Scheduling Metadata Scans

You can schedule a metadata scan for an environment whose schema was selected or it was scanned at least once.

To schedule a metadata scan, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **Schedule Metadata Scan**.

The Job Scheduler page appears.

Job Scheduler _ □ ×

Note* : Please provide CC List with comma(,) separated values

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Job Name	Specifies the job name. For example, Administrator1585030550001. This field autopopulates with a job name. You can edit it and enter a different job name.
Interval	Specifies the frequency of the job. For example, Every Week.
Schedule Job On	Set the date and time of the job using . For example, 03-24-2020 11:45.

Field Name	Description
Local or Server	<p>Select whether the job uses local or server time.</p> <ul style="list-style-type: none"> ▪ Local: Refers to your local machine. ▪ Server: Refers to the machine where your application is deployed.
Import Metadata Options	<ul style="list-style-type: none"> ▪ Add New: This option adds new objects to the existing object list. Existing metadata is not updated. ▪ Update Existing + Add New: This option adds new objects to the existing list and at the same time the existing metadata is also updated. ▪ Delete & Reload: This option deletes all the existing metadata and scans only the new objects that have been selected. ▪ Import Comments: Select the check box to import comments. ▪ Table(s): Select the check box to import Tables. ▪ View(s): Select the check box to import Views. ▪ Synonym(s): Select the check box to import Synonyms. ▪ Version: Select the check box to create a new version of the environment. To enter version label and change description, click .
Notify Me	<p>Switch Notify Me to ON to receive a job notification.</p> <p>For more information on configuring notifications, refer to the Configuring Notifications on Scanning Metadata topic.</p>
Notification Email	<p>This field is autopopulated with your email ID. You receive email notifications about the scheduled job from the administrator's email ID. For more information on configuring the administrator's email ID, refer to the Configuring Email Settings topic.</p>
CC List	<p>Enter a comma-separated list of email IDs that should receive email notifications about the scheduled job.</p> <p>For example, ab.dav@xyz.com, cal.kai@xyz.com</p>

5. Click **Schedule**.

The metadata scan is scheduled and the scheduled job is listed on the **Scheduled Jobs** tab.

#	Job Name	Job Type	Scheduled Objects	Previous Fire Time	Next Fire Time	Job State	Created By	Created Date Time	Last Modified By	Last Modified Date Time	Edit
1	1620143110236	Metadata Scan	DBO		05-06-2021 15:45	NORMAL	Administrator	2021-05-04 15:45:37.079	Administrator	2021-05-04 15:45:37.079	

The metadata is scanned at the scheduled time and the environment is updated.

If you have opted to create new version of the environment, then a new version is created and the old version is archived.

Use the following options to work on the scheduled job list:

Edit

Use this option to update the scheduled job.

Delete

Use this option to delete the scheduled job.

Updating Table Properties

Table properties are classified as technical and business properties. You can update these properties for a table and use user defined fields to enter additional properties of a table.

To update Table Properties, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a table.

By default, the Columns tab opens.

The screenshot shows the 'System Catalogue' interface with the 'Columns' tab selected. The left pane shows a tree view of the system catalogue, with 'erwin DM' expanded to show 'DM Landing (v1.00)', 'DM Staging (v1.00)', and 'Claim'. The 'Claim' table is selected. The main pane displays the 'Columns' tab, which includes a 'Statistics' section and a 'Data Dictionary' table.

Statistics

64 Total Columns	0/64 Columns With Expanded Logical Names	1/64 Total Primary Key Colour
---------------------	---	----------------------------------

Data Dictionary

#	Column Name	Logical Column Name	Column Comments	Column Definition	SDI Flag
1	Claim Surrogate Key	Claim Surrogate...		Claim Surro...	🔒
2	Claim ID	Claim ID		Claim ID is ...	🔒

3. Click the **Properties** tab.

Columns	Properties	Extended Properties	Data Lineage	Impact Analysis	Mindmap
Technical Properties					
Name	Claim			Environment Name	DM Staging
System Name	erwin DM			No of Rows	
Synonym Reference				FileType	
Entity Type	TABLE				
Workflow Status	Preliminary Draft				
Business Properties					
Data Steward				Logical Name	Claim
Definition	A claim is a statement listing servi			Expanded Logical Name	
Comments				JSON Physical Name	

4. Click .

5. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Sub-Field	Description
Fully Qualified Table Name		Specifies the qualified table name. For example, dbo.Categories.
Schema Name		Specifies the schema name of the table. For example, dbo.
Technical Properties	Name	Specifies the physical name of the table. For example, Account or Currency.
	System Name	Specifies the physical name of the system under which the table exists. For example, Enterprise Data Warehouse. You cannot edit this field.
		Specifies the synonym reference for the table.

Field Name	Sub-Field	Description
	Synonym Reference	<p>For example, Sales_Rep_Information.</p> <p>This field is autopopulated during the metadata scan. You cannot enter it manually.</p>
	Environment Name	<p>Specifies the physical name of the environment under which the table exists.</p> <p>For example, EDW-Test.</p> <p>You cannot edit this field.</p>
	No of Rows	<p>Specifies the total number of rows in the table.</p> <p>For example, 100.</p>
	File Type	<p>Specifies the file type of the table if the table is in a file-based environment.</p> <p>For example, MS Excel.</p>
	Workflow Status	<p>Specifies the workflow status of the table.</p> <p>For example, draft.</p> <p>By default, Metadata_Manager_Default_Workflow_1 is assigned to all the tables in the Metadata Manager. You can create and re-assign a workflow to all the tables in an environment.</p> <p>For more information on workflow status, refer to the Assigning Workflows to Tables topic.</p>
Business Properties	Data Steward	<p>Specifies the name of the data steward responsible for the table.</p> <p>For example, Jane Doe.</p> <p>Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager.</p> <p>To assign data steward, select a data steward from the drop down options.</p>
	Table Defin-	<p>Specifies the definition of the table.</p>

Field Name	Sub-Field	Description
	ition	For example: The table contains five columns with emp ID column as the primary key.
	Table Comments	Specifies comments about the table. For example: The table contains details of the employees.
	Table Class	Specifies the table class property. For more information on configuring table class, refer to Configuring Table and Column Class topic.
	DQ Score	Specifies the overall data quality score of the table. For example, High (7-8). For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.
	Logical Table Name	Specifies the logical name of the table. For example, if the physical name of a table is DIM_Customer, then the logical name of the table is Customer Dimension.
	Expanded Logical Name	Specifies the expanded logical name of the table. For example, if the physical name of a table is RM_Resource, then the expanded logical name of the table is RM Sales Representative. You can configure expanded logical name of tables in bulk at system and environment level.
	JSON Physical Name	Specifies the JSON physical name of the table if the table is in a JSON environment.
	Used in Gap Analysis	Specifies whether the table is being used as part of a gap analysis to check table usage in mappings. Select the check box if the table is used in gap analysis. For more information on performing table gap analysis, refer to the Performing Table Gap Analysis topic.
	Sensitive	Specifies whether the table is sensitive.

Field Name	Sub-Field	Description
	Data Indicator (SDI) Flag	Switch Sensitive Data Indicator (SDI) Flag to  to mark the table sensitive.
	Sensitive Data Indicator (SDI) Classification	Specifies the SDI classification of the table. For example, PHI. This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . For more information on configuring SDI classifications refer to the Configuring Sensitive Data Indicator Classifications topic.
	Sensitive Data Indicator (SDI) Description	Specifies the description of the SDI classification. For example: Protected Health Information. It is enabled when Sensitive Data Indicator (SDI) Flag is switched to  . The field autopopulates based on the SDI classification.
	Table Alias	Specifies the alias name of the table. For example, Sales_Representative_Table.

6. Click .

The table properties are updated.

You can use user defined fields with different UI labels. For more information on using UI labels for user defined fields, refer to the [Configuring Language Settings](#) topic.

You can also hide user defined fields. For more information on hiding user defined fields, refer to the [Displaying User Defined Fields](#) topic.

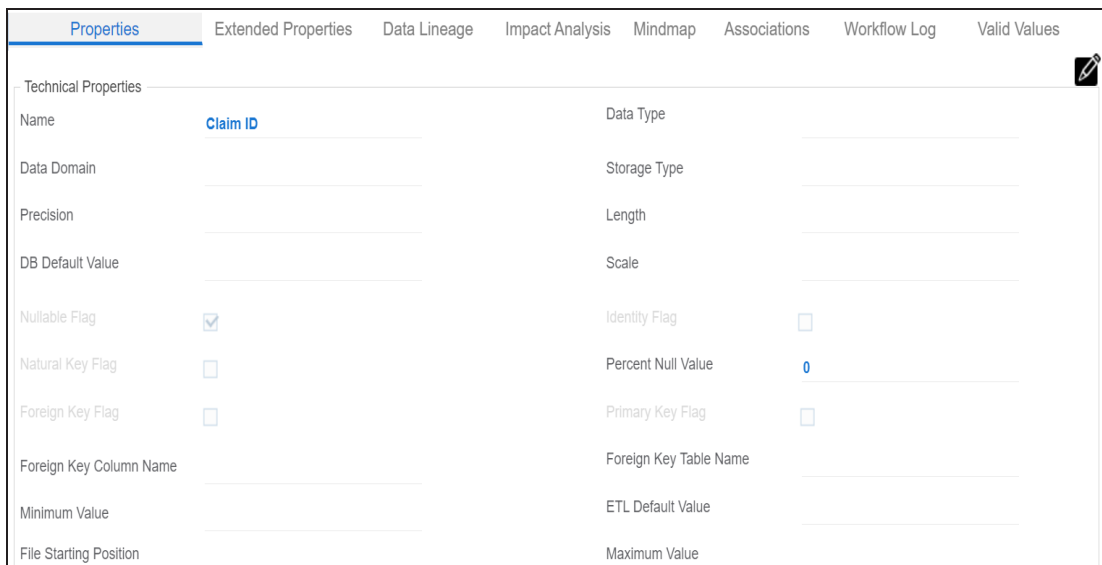

Updating Column Properties

Column properties are classified as technical and business properties. You can update these properties for a column and use user defined fields to enter additional properties of a column.

To update Column Properties, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a column.

By default, the Properties tab opens.

Properties		Extended Properties	Data Lineage	Impact Analysis	Mindmap	Associations	Workflow Log	Valid Values
Technical Properties

Data Steward: -Select Data Steward- Logical Name:

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Sub-Field	Description
Technical Properties	Name	Specifies the physical name of the column. For example, Object_ID.
	Data Domain	Specifies the data domain values for the column. For example, data domain of a Gender column is M and F.
	Precision	Specifies the precision of the column. For example: 5, the number 123.45 has a precision of 5 and a scale of 2.
	DB Default Value	Specifies the default value of the column in the database. For example, True.
	Nullable Flag	Specifies whether the column allows null values. Select the check box if the column allows null values.
	Natural Key Flag	Specifies whether the column is a natural key. Select the check box if the column is a natural key.

Field Name	Sub-Field	Description
	Foreign Key Flag	Specifies whether the column is a foreign key. Select the check box if the column is a foreign key.
	Foreign Key Column Name	Specifies the actual column name where the column is listed as a PK (in case the current column being an FK). For example, ID.
	Minimum Value	Specifies the minimum value of the column. For example, minimum value of ID column can be 424.
	File Starting Position	Specifies the starting position in the file.
	Attribute Type	Specifies the attribute type of the column. It is auto-populated with ENTITY_ELEMENT.
	Workflow Status	Specifies the workflow status of the column. For example, draft. By default, Metadata_Manager_Default_Workflow is assigned to all the columns in the Metadata Manager. You can create and re-assign a workflow to all the columns in a table. For more information on the workflow status, refer to the Assigning Workflows to the Columns topic.
	Data Type	Specifies the physical data type of the column. For example, varchar.
	Storage Type	Specifies the storage type of the column. For example, row store/column store in the case of SAP systems.
	Length	Specifies the physical length of the column. For example, if the column datatype is char(5), then its physical length is 5.
	Scale	Specifies the physical scale of the column. For example: The number 123.45 has a precision of 5 and a scale of 2.

Field Name	Sub-Field	Description
	Identity Flag	Specifies whether the column is used as an identity flag. Select the check box if the column is used as an identity flag.
	Percent Null Value	Specifies the percentage of null values in the column. For example, 10%.
	Primary Key Flag	Specifies whether the column is a primary key. Select the check box if the column is used as the primary key.
	Foreign Key Table Name	Specifies the actual table name where the column is listed as a PK (in case of the current column being an FK).
	ETL Default Value	Specifies the default ETL value of the column during the load process.
	Maximum Value	Specifies the maximum value of the column. For example, maximum value of ID column can be 1503.
Business Properties	Data Steward	Specifies the data steward responsible for the column. For example, Jane Doe. Users assigned with the Legacy Data Steward role appear as drop down options. You can assign this role to a user in the Resource Manager. To assign data steward, select a data steward from the drop down options.
	Column Definition	Specifies the definition of the column. For example: The column is a primary key that allows 5 alpha-numeric characters.
	Column Comments	Specifies the comments about the column. For example: The column provides unique identification of employee in the employee table.
	Sensitive Data Indicator (SDI)	Specifies whether the column is sensitive. Switch Sensitive Data Indicator (SDI) Flag to  to mark the column sensitive.

Field Name	Sub-Field	Description
	Sensitive Data Indicator (SDI) Classification	<p>Specifies the SDI classification of the column.</p> <p>For example, PHI.</p> <p>This list is enabled when Sensitive Data Indicator (SDI) Flag is switched to . For more information on configuring SDI classifications, refer to the Configuring Sensitive Data Indicator Classifications topic.</p>
	Sensitive Data Indicator (SDI) Description	<p>Specifies the description of the SDI classification.</p> <p>For example: Protected Health Information.</p> <p>It is enabled when Sensitive Data Indicator (SDI) Flag is switched to . The field autopopulates based on the SDI classification.</p>
	Column Class	<p>Specifies the column class property.</p> <p>Select a column class. For more information on configuring column class, refer to the Configuring Table and Column Class topic.</p>
	DQ Score	<p>Specifies the overall data quality score of the column.</p> <p>For example, High (7-8).</p> <p>For more information on configuring DQ scores, refer to the Configuring Data Profiling and DQ Scores topic.</p>
	Logical Column Name	<p>Specifies the logical name of the column.</p> <p>For example, if the physical name of the table is CUST_ID_NUM, then the logical name of the table is Customer Identification Number.</p>
	Expanded Logical Name	<p>Specifies the expanded logical name of the column.</p> <p>For example, if the physical name of the column is Resource_ID, then the logical name of the .</p> <p>You can also configure expanded logical name of columns in bulk at system and environment level.</p>

Field Name	Sub-Field	Description
	JSON Physical Column Name	Specifies the JSON physical name of the column if the column is in a JSON environment. For example, objectID.
	Used in Gap Analysis	Specifies whether the column is being used in a gap analysis for usage in mappings. Select the check box if the column is used in the gap analysis. For more information on performing column gap analysis, refer to the Performing Column Gap Analysis topic.
	Column Alias	Specifies the alias name of the column. For example, Resource_ID.
	Business Key Flag	Specifies whether the column is a business key. Select the check box if the column is a business key.

5. Click .

The column properties are updated.

You can use user defined fields with different UI labels. For more information on using UI labels for user defined fields, refer to the [Configuring Language Settings](#) topic.

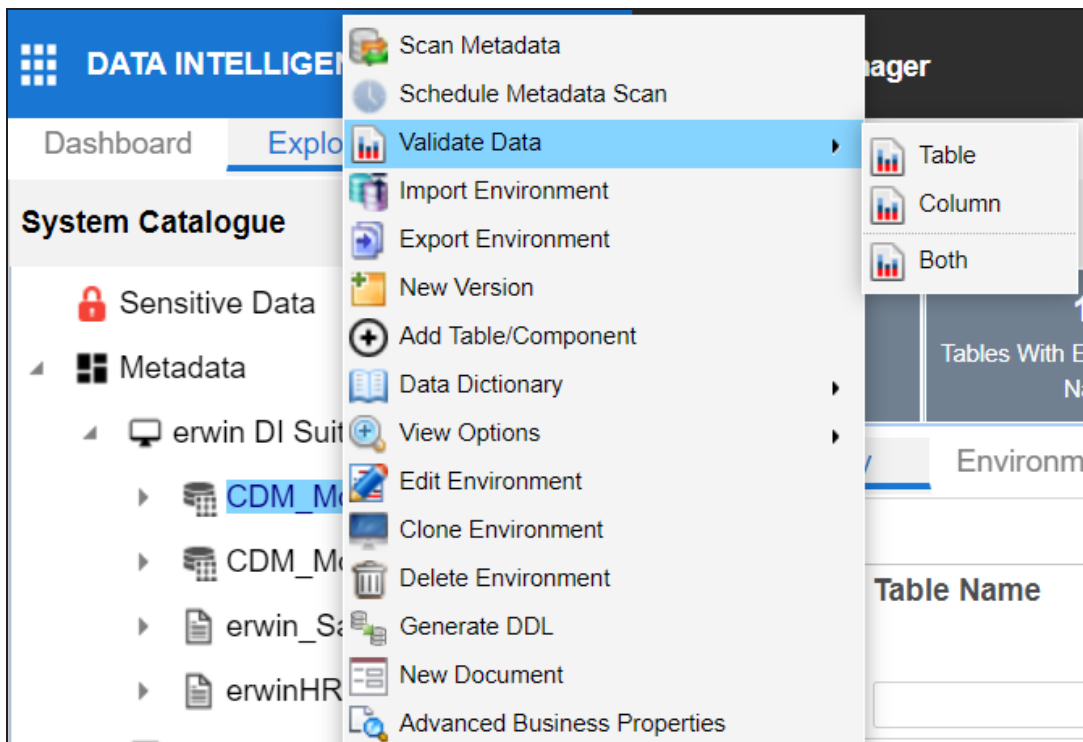

You can also hide user defined fields on the Column Properties tab. For more information on hiding user defined fields, refer to the [Displaying User Defined Fields](#) topic.

Validating Data

You can validate the data in the environment at table and column levels. The data is validated against the forms (Table Properties or Column Properties) associated with the environment. The forms can be created, configured, and associated with environments in the [Form Validation Settings](#).

To validate data, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Hover over **Validate Data**.
4. Use the following options:

Table

To validate tables in the environment, click **Table**.

Column

To validate columns in the environment, click **Column**.

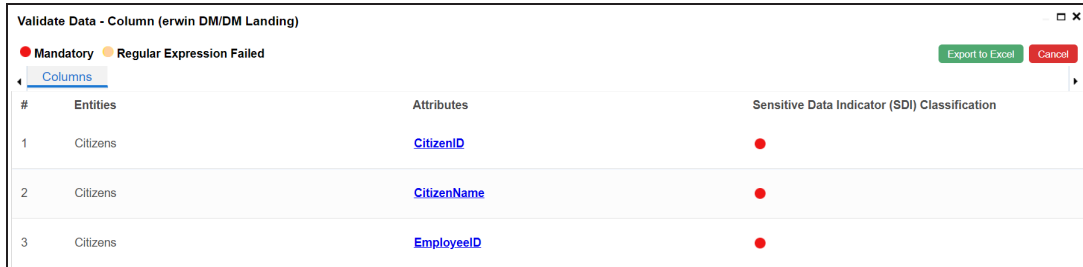

Both

To validate tables and columns both, click **Both**.

The data is validated.

The columns or tables that fail mandatory field criterion are marked with red.

The columns or tables that fail regular expression criterion are marked with orange.

Validate Data - Column (erwin DM/DM Landing)

● Mandatory ● Regular Expression Failed

Export to Excel Cancel

Columns

#	Entities	Attributes	Sensitive Data Indicator (SDI) Classification
1	Citizens	CitizenID	●
2	Citizens	CitizenName	●
3	Citizens	EmployeeID	●

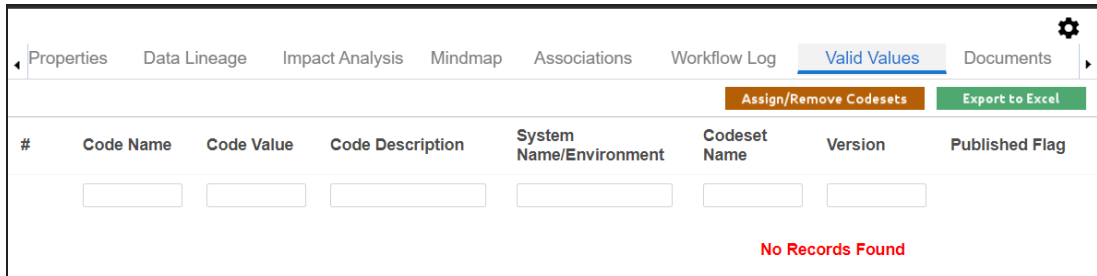

You can download the validation report in the XLSX format. To download the validation reports, click **Export to Excel**.

Assigning Codesets to Columns

You can create codesets in the Codeset Manager and assign them to a source or target column as valid values. You can also export the valid values in the XLSX format.

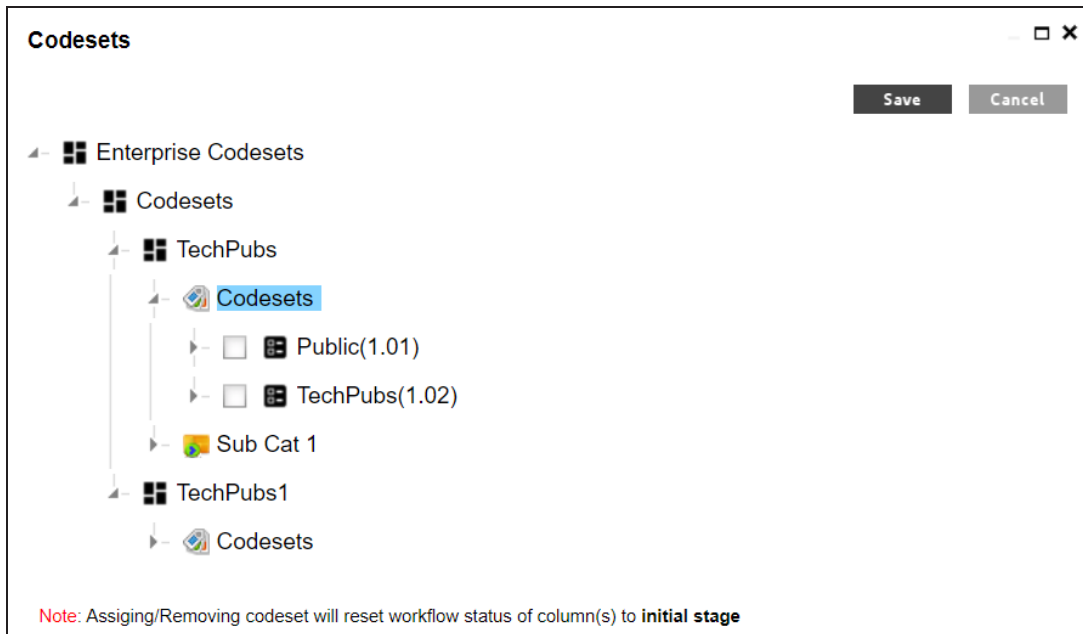

To assign codesets to columns, follow these steps:

1. In the **System Catalogue** pane, click a column.
2. Click the **Valid Values** tab.

3. On the **Valid Values** tab, click **Assign/Remove Codesets**.

The Codesets page appears.

4. Select the required codesets and click **Save**.

The codesets are saved on the **Valid Values** tab.

#	Code Name	Code Value	Code Description	System Name/Env	Codeset Name	Versior	Published Flag	Category Hierarchy	Created By	Created Date
1	Public	2	The code value for Public		Public	1.01	N	TechPubs	Administrator	2020-04-10 06:06: A
2	Admin	1	The code value for Admir		TechPubs	1.02	N	TechPubs	Administrator	2020-04-10 05:57: A

You can download the assigned codesets in the XLSX format. To download the assigned codesets, click **Export to Excel**.

For more information on managing codesets, refer to the [Maintaining Enterprise Codesets](#) section.

Viewing Workflow Logs of Tables

You can view workflow logs of a table in the Metadata Manager. It displays the current state of the table in the workflow. By default, the `Metadata_Manager_Default_Workflow_1` is assigned to all the tables. You can create your own workflow and assign it to tables. For more information, creating and assigning workflows to tables, refer to the [Managing Metadata Manager Workflows](#) section.

To view workflow log of tables, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a table.
3. In the central pane, click the **Workflow Log** tab.

The current workflow stage blinks in the diagram.

Use the following options:

User Comments

To view users and the comments entered by the users in each stage, hover over

Expand/Hide Users and Roles

Use this option to view or hide users and roles assigned to the stages of the workflow.

Collapse/Expand Roles

This option is enabled when you are in the Expand Users and Roles view. Use this option to collapse or expand roles.

Collapse/Expand Users

This option is enabled when you are in the Expand Users and Roles view. Use this option to collapse or expand users.

Export Image

Use this option to download the workflow in the JPG format.

Viewing Workflow Logs of Columns

You can view workflow logs of a column in the Metadata Manager. It displays the current state of the column in the workflow. By default, the Metadata_Manager_Default_Workflow is assigned to all the columns. You can create your own workflow and assign it to columns. For more information, creating and assigning workflows to columns, refer to the [Managing Metadata Manager Workflows](#) section.

To view workflow log of columns, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a column.
3. In the central pane, click the **Workflow Log** tab.

The current workflow stage blinks in the diagram.

Use the following options:

User Comments

To view users and the comments entered by the users in each stage, hover over

Expand/Hide Users and Roles

Use this option to view or hide users and roles assigned to the stages of the workflow.

Collapse/Expand Roles

This option is enabled when you are in the Expand Users and Roles view. Use this option to collapse or expand roles.

Collapse/Expand Users

This option is enabled when you are in the Expand Users and Roles view. Use this option to collapse or expand users.

Export Image

Use this option to download the workflow in the JPG format.

Associating Tables

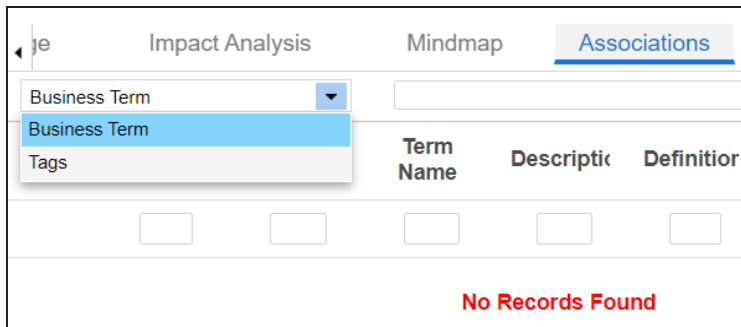

You can associate tables with business assets, systems, environments, tables, and columns. You can also view mind map and association statistics.

Ensure that:

- Business assets are enabled. You can add custom business assets and enable them in [Business Glossary Manager Settings](#).
- Relationship between table and the asset type is defined. You can define associations and relationships in [Business Glossary Manager Settings](#).

To associate tables with asset types, follow these steps:

1. In the **System Catalogue** pane, click the required table.
2. In the central pane, click the **Associations** tab.
3. Select an asset type from the drop down.

4. Click **+**.

The Relationship Associations page appears.

You can associate multiple assets with column and view the associations based on a qualifier view in the mind map. For more information, refer to the [Setting Up Associations Using Qualifiers](#) topic.

Versioning Environments

You can create versions of an environment and keep a legacy of old metadata. You can also track changes by comparing the two versions of the environment.

To create new versions of environments, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.

3. Click **New Version**.

The New Version page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Environment Name	Specifies the name of the environment. For example, EDW-Test.
Version	Specifies the new version of the environment. For example, 1.02.
Version Label	Specifies the version label of the environment. For example, Beta. For more information on configuring version display of environments, refer to the Configuring Version Display topic.
Change Description	Specifies the description of the changes made in the environment. For example: A new table, EMP_Details was added in the environment.

5. Click .

A new version of the environment is created and stored in the environment tree.

The old version of the environment is archived. You can also [compare the two versions of the environment](#).

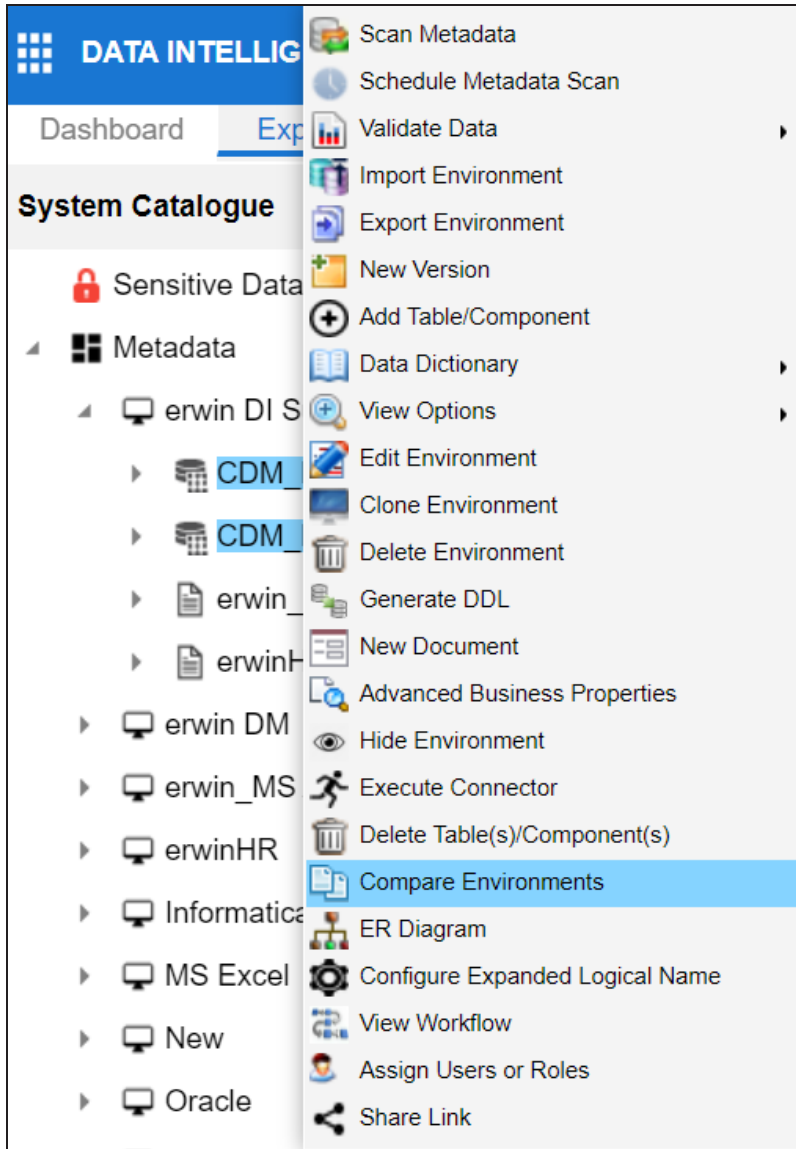

Comparing Environments

You can compare two environments and trace the table and column level changes. Comparing two environments enables you to debug scanned metadata and makes your data integration project efficient.

To compare environments, follow these steps:

1. In the **System Catalogue** pane, select any two environments.

You can use CTRL or Shift Key to select two environments.

2. Click **Compare Environments**.

The Compare Environments page appears. By default, it opens the Table Level Changes tab.

Compare Environments

Table Level Changes | Column Level Changes

#	Change Description	System Name	Environment	Table	Definition	Logical Name	Expanded Logical Name	Comment
1	Table Exists in one Environment and not the other	erwin DI Suite	CDM_Model_F	Group.AccountingDist	NoDescriptio	AccountingD	AccountingDistributionT	
2	Table Exists in one Environment and not the other	erwin DI Suite	CDM_Model_C	Group.AddressCount	NoDescriptio	AddressCour	AddressCountryRegion	
3	Table Exists in one Environment and not the other	erwin DI Suite	CDM_Model_C	Group.AddressTypeT	NoDescriptio	AddressType	AddressTypeTable RU	
4	Table Exists in one Environment and not the other	erwin DI Suite	CDM_Model_F	Group.AgreementClas	NoDescriptio	AgreementCl	AgreementClassificatio RU	
5	Table Exists in one Environment and not the other	erwin DI Suite	CDM_Model_F	Group.AssetAccelerat	NoDescriptio	AssetAcceler	AssetAcceleratedDepG JP	

To view column level changes, on the **Compare Environments** page, click the **Column Level Changes** tab.

Column level changes are displayed.

To download the comparison report, click .

The comparison report is downloaded in the XLSX format.

Downloading Data Dictionaries

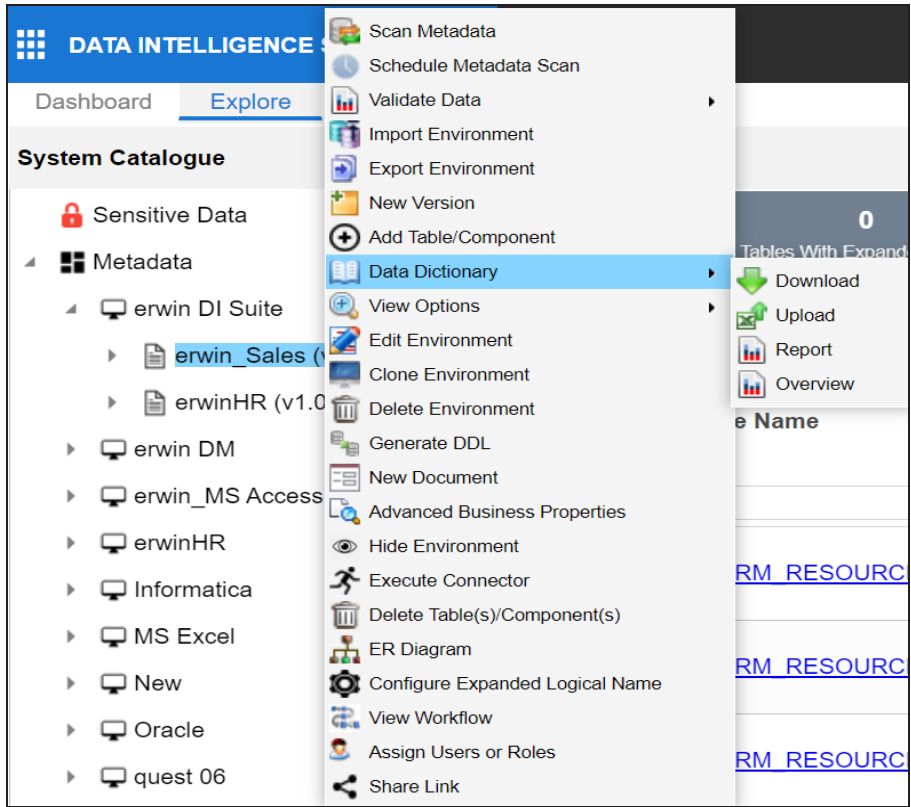

Once the metadata is scanned and stored in the repository, you can instantly view and export data dictionary at the environment and table levels.

A data dictionary at environment level includes definitions of all the tables and columns available in the environment. Whereas, a data dictionary at table level includes the definitions of the table and its columns.

Environment Level

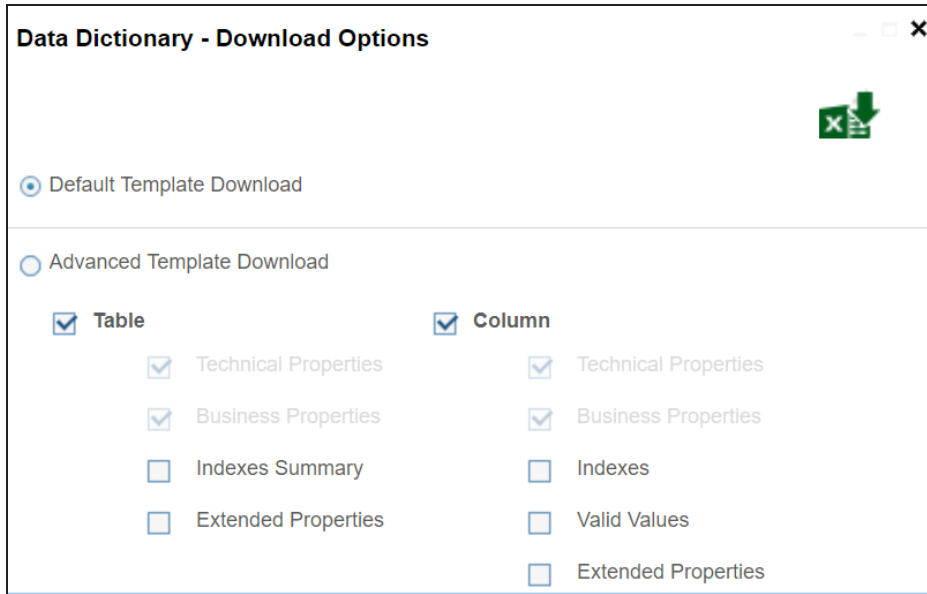

To download data dictionaries at environment level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, right-click an environment.
3. Hover over **Data Dictionary**.

4. Click **Download**.

The Data Dictionary-Download Options page appears.

5. Use the following options:

Default Template Download

Use this option to download the data dictionary in a default template. The default template includes technical and business properties of tables and columns.

Advanced Template Download

Use this option to download the data dictionary in an advanced template. You can customize an advanced template to include additional information, such as Indexes Summary, Extended Properties for Tables, Valid Values, and Extended Properties for columns.

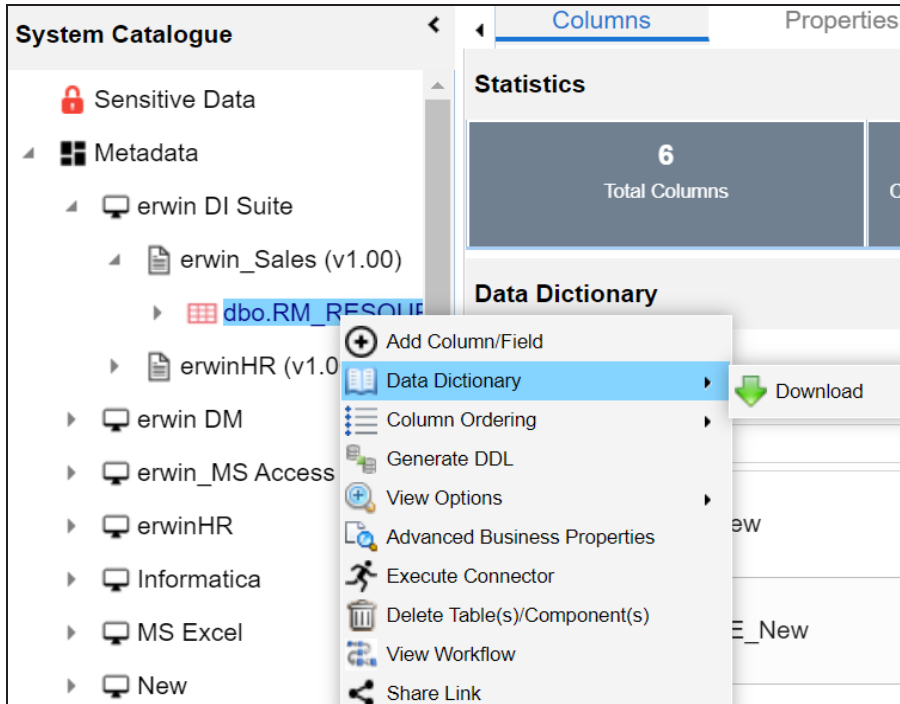

6. Click .

Data dictionary is downloaded in the XLSX format.

Table Level

To download data dictionaries at table level, follow these steps:

1. In the **System Catalogue** pane, right-click a table.
2. Hover over **Data Dictionary**.

3. Click **Download**.

The data dictionary of the selected table is downloaded in the XLSX format.

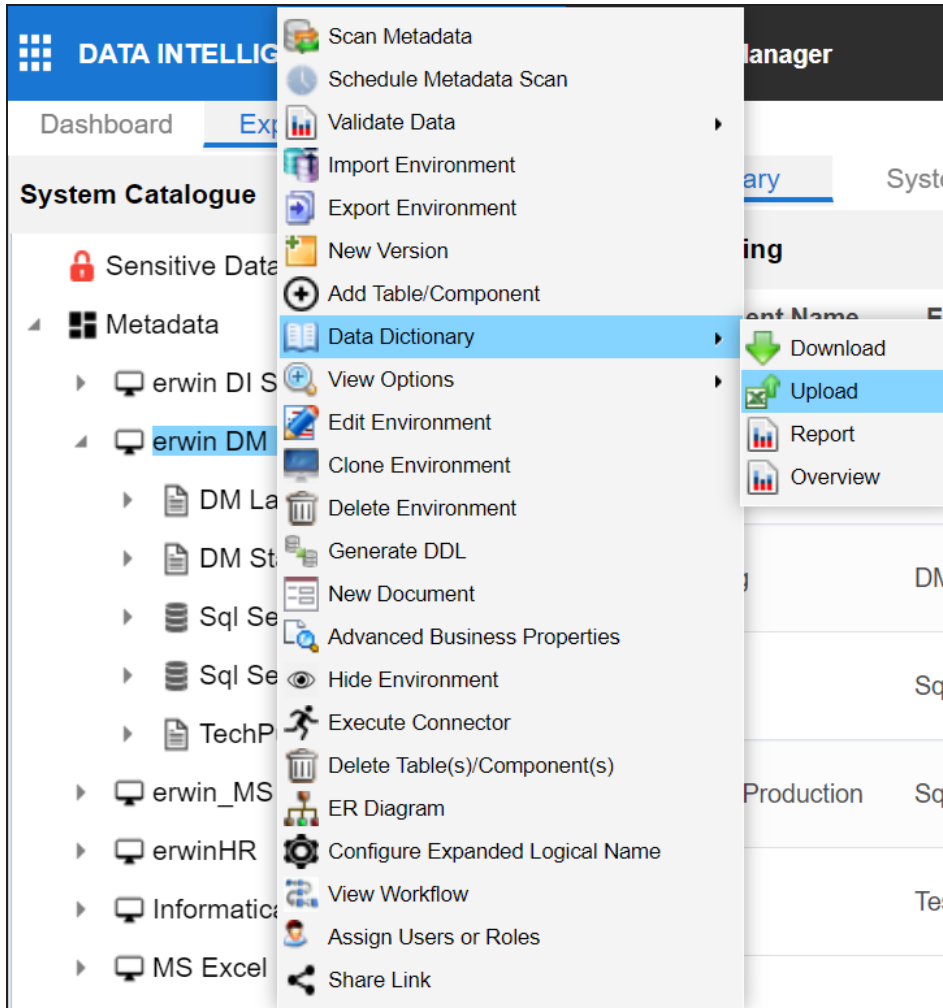

You can also [view data dictionary report](#) at system level and [update data dictionary](#) at environment level.

Uploading Data Dictionary

You can update and upload a data dictionary at environment level in the XLSX format. To update data dictionary, you can either use an existing XLSX file or download a data dictionary file from a suitable environment. Ensure that the XLSX file follows the correct template. For more information on downloading a data dictionary in XLSX, refer to the [Downloading Data Dictionary](#) topic.

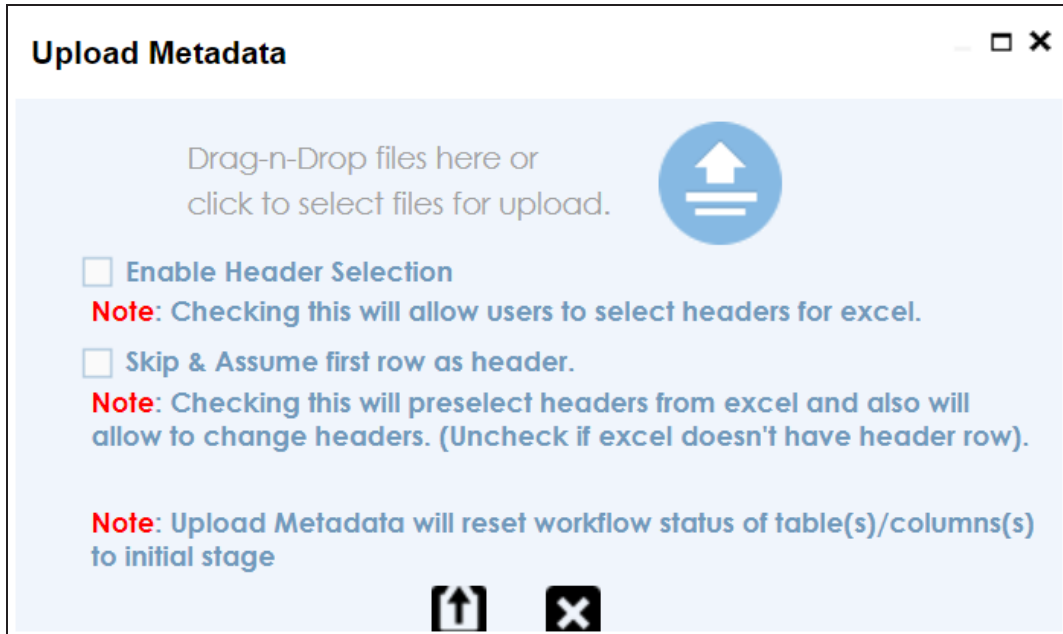

To upload data dictionaries at environment level, follow these steps:

1. In the **System Catalogue** pane, right-click an environment.
2. Hover over **Data Dictionary**.

3. Click **Upload**.

The Upload Metadata page appears.

4. Drag and drop the updated data dictionary file or use  to upload the file.

You can use the following options to select headers for the XLSX file:

Enable Header Selection

Use this option to select headers for the XLSX file. Select the check box and click .

The Upload Metadata page appears.

Excel Metadata Preview Screen Please use first row (double click on NOT IN USE Cell) to set each column's identity!

	NOT IN USE	NOT IN USE	NOT IN USE	NOT IN USE	NOT IN USE	NOT IN USE	NOT IN USE	NOT IN USE
1	TABLE_NAME	TABLE_DEF	TABLE_SDL_FLAG	TABLE_SDL_CLASSIFIC	TABLE_SDL_DESCRIPTIC	TABLE_COMMENTS	LOGICAL_TABLE_NAM	COLUMN_NAME
2	Citizens						Citizens	CitizenID
3	Citizens						Citizens	CitizenName
4	Citizens						Citizens	EmployeeID
5	Employees						Employees	EmployeeName
6	Employees						Employees	EmployeeID

To select headers, double-click the **NOT IN USE** cell.

Skip & Assume first row as header

You can use this option only when the Enable Header Selection check box is selected. Use this check box to use the first row as header.

Select the check box and click .

The Upload Metadata page appears. The first row in the XLSX file appears as the header.

Excel Metadata Preview Screen Please use first row (double click on NOT IN USE Cell) to set each column's identity!  

	Table Name	Table Definition	Table SDI Flag	Table SDI Classificatio	Table SDI Description	Table Comments	Logical Table Name	Column Name	
1	Citizens						Citizens	CitizenID	
2	Citizens						Citizens	CitizenName	
3	Citizens						Citizens	EmployeeID	
4	Employees						Employees	EmployeeName	
5	Employees						Employees	EmployeeID	

To select alternate headers, double-click the header cell.

5. Click .

The data dictionary is updated at the environment level.

Viewing Data Dictionary Report

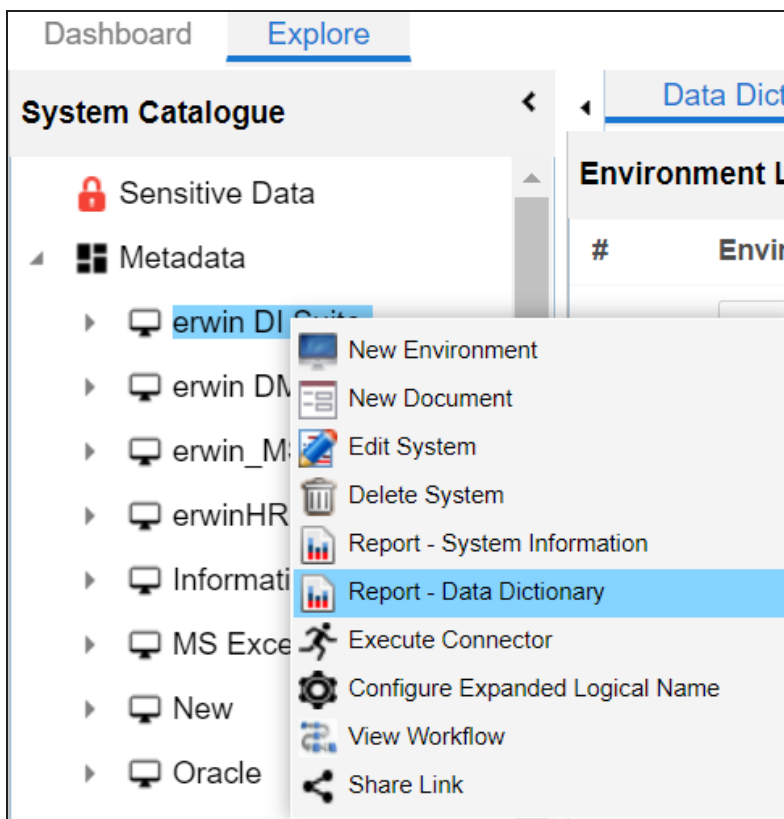

You can view a data dictionary report at the system level. The data dictionary report includes all the environments in the system and it can be exported in various formats, such as HTML, PDF, and MS Excel.

It is meaningful to view data dictionary report after scanning metadata into an environment.

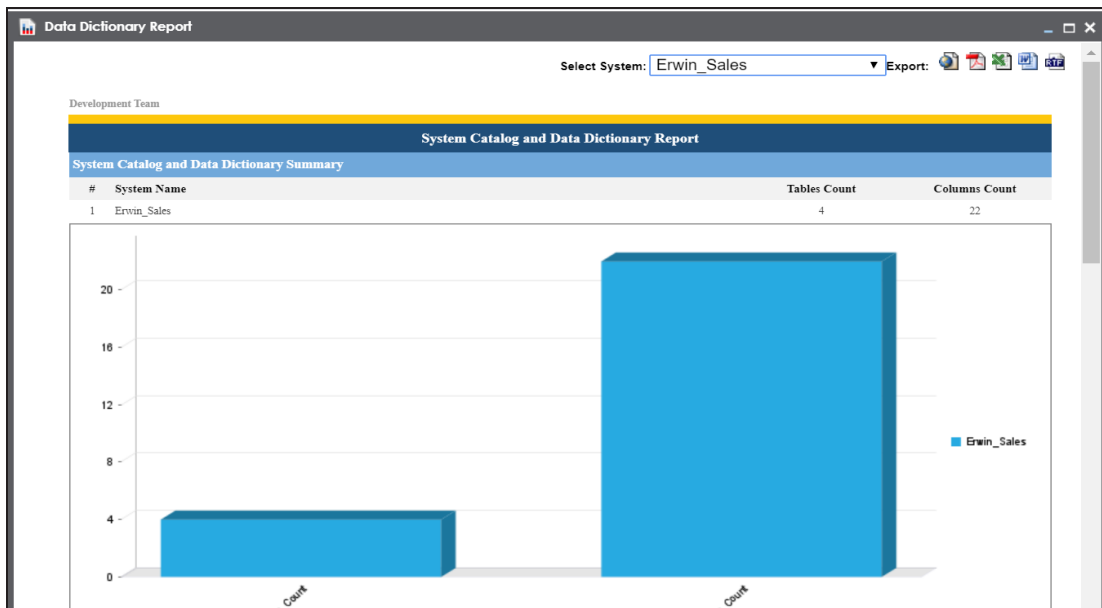

To view data dictionary at system level, follow these steps:

1. In the **System Catalogue** pane, right-click a system.

2. Click **Report - Data Dictionary**.

The Data Dictionary Report appears. You can use Select System to view the data dictionary reports of any system.

Use the following options to export the data dictionary report:

HTML (🌐)

Use this option to export the report in the HTML format.

PDF (📄)

Use this option to export the report in the PDF format.

MS Excel (📊)

Use this option to export the report in the XLSX format.

MS Word (📄)

Use this option to export the report in the DOCX format.

RTF (📄)

Use this option to export the report in the RTF format.

Running Impact Analysis

After mapping source metadata with target metadata, you can run impact analysis on the technical assets. The impact analysis helps you understand upstream and downstream dependencies of technical assets. It helps you assess the impact of transformations and source or target-level changes.

You can run impact analysis at the following levels:

- [Environment](#)
- [Column](#)
- [Table](#)

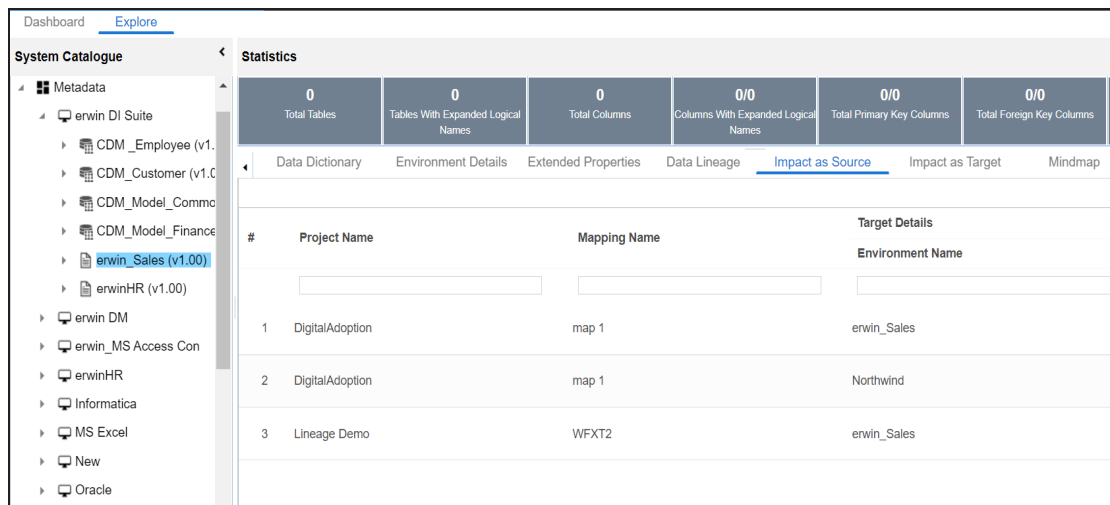

Environment

You can perform impact analysis on an environment and analyze its impact as source and target.

To perform impact analysis at environment level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click an environment.
3. In the central pane, click any one of the following tabs:
 - **Impact as Source:** Click this tab to analyze the impact of the environment as a source.

The Impact as Source tab shows a list of mappings where the environment is a source.

The screenshot displays the 'Impact as Source' tab in the Erwin Data Catalog. The interface includes a 'System Catalogue' pane on the left with a tree view of metadata, and a central pane with a 'Statistics' bar and a table of mappings. The 'Statistics' bar shows zero counts for various metrics. The table lists three mappings with columns for ID, Project Name, Mapping Name, and Environment Name.

#	Project Name	Mapping Name	Target Details Environment Name
1	DigitalAdoption	map 1	erwin_Sales
2	DigitalAdoption	map 1	Northwind
3	Lineage Demo	WFXT2	erwin_Sales

- **Impact as Target:** Click this tab to analyze the impact of the environment as target.

The Impact as Target tab shows a list of mappings where the environment is a target.

You can download the impact analysis in the XLSX format. To download the impact analysis, click .

You can also perform impact analysis at the following levels:

- [Table](#)
- [Column](#)

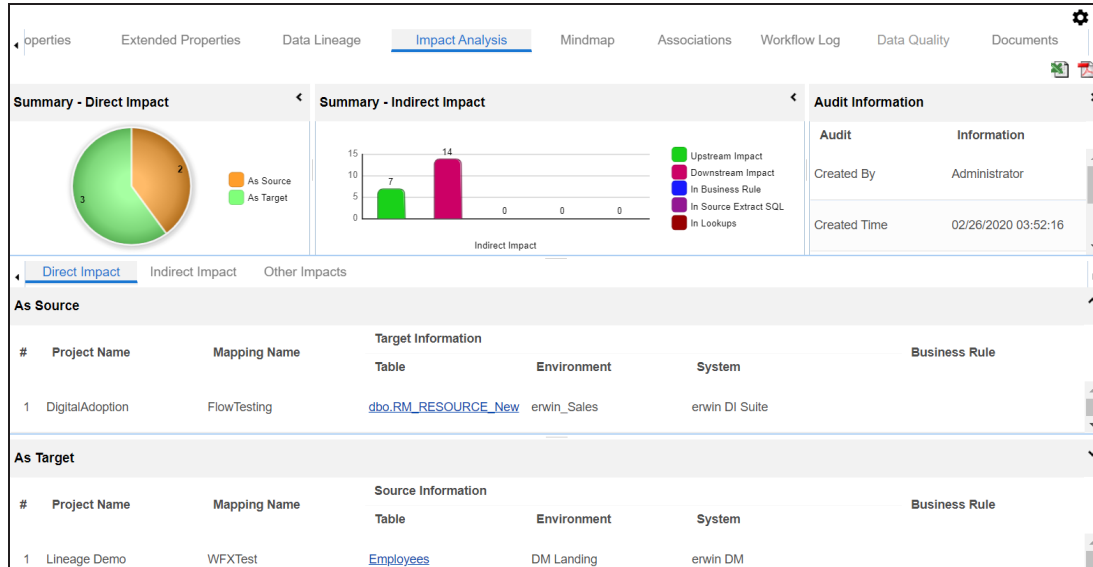

Table

A table can be a source, target, or both in a mapping specification. It can also be used for transformations, such as business rules and lookups in a mapping project. The impact analysis on a table helps you identify these impacts of the table on mapping projects.

To run impact analysis at table level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a table.
3. Click the **Impact Analysis** tab.

By default, the Direct Impact tab opens. It displays the impact of the table as source and target.

To view the indirect impact, click the **Indirect Impact** tab.

It displays the upstream and downstream impact of the table.

To view other impacts, click the **Other Impacts** tab.

It displays the impact of the table on:

- Business rules
- Source Extract SQL
- Lookups

You can also perform impact analysis at the following levels:

- [Environment](#)
- [Column](#)

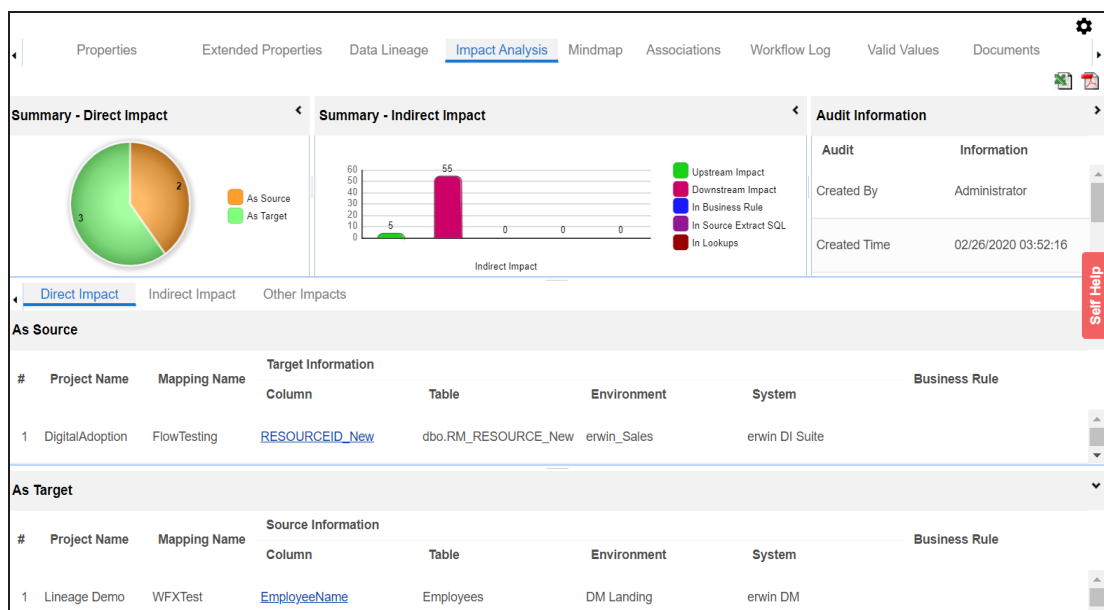

Column

A column can be a source, target, or both in a mapping specification. It can also be used for transformations, such as business rules and lookups in a mapping project. The impact analysis on a column helps you identify these impacts of the column on mapping projects.

To perform impact analysis on columns, follow these steps:

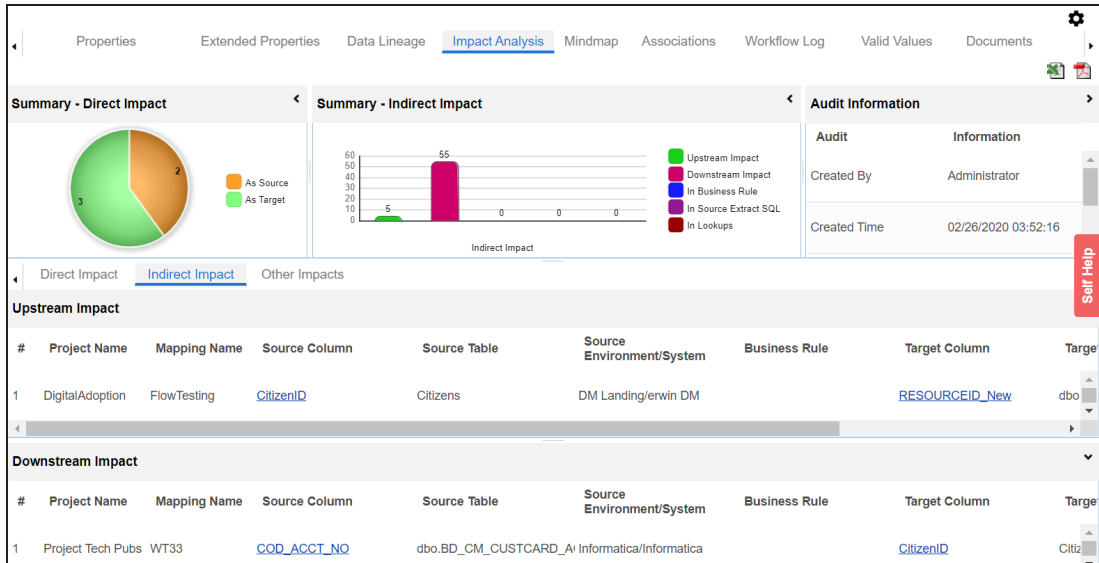

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a column.
3. Click the **Impact Analysis** tab.

By default, the Direct Impact tab opens. It displays the impact of the column as source and target.

To view the indirect impact, click the **Indirect** tab.

It displays the upstream and downstream impact of the column.

To view other impacts, click the **Other Impacts** tab.

It displays the impact of the column on:

- Business rules
- Source extract SQL
- Lookups

Running Lineage Analysis

After mapping source metadata with target metadata, you can run lineage analyzer in Metadata Manager. The generated lineage report helps you trace the data's origin, its transformations, and its destination after source to target mappings.

You can run the lineage at the following levels:

- [System](#)
- [Environment](#)
- [Table](#)
- [Column](#)

System

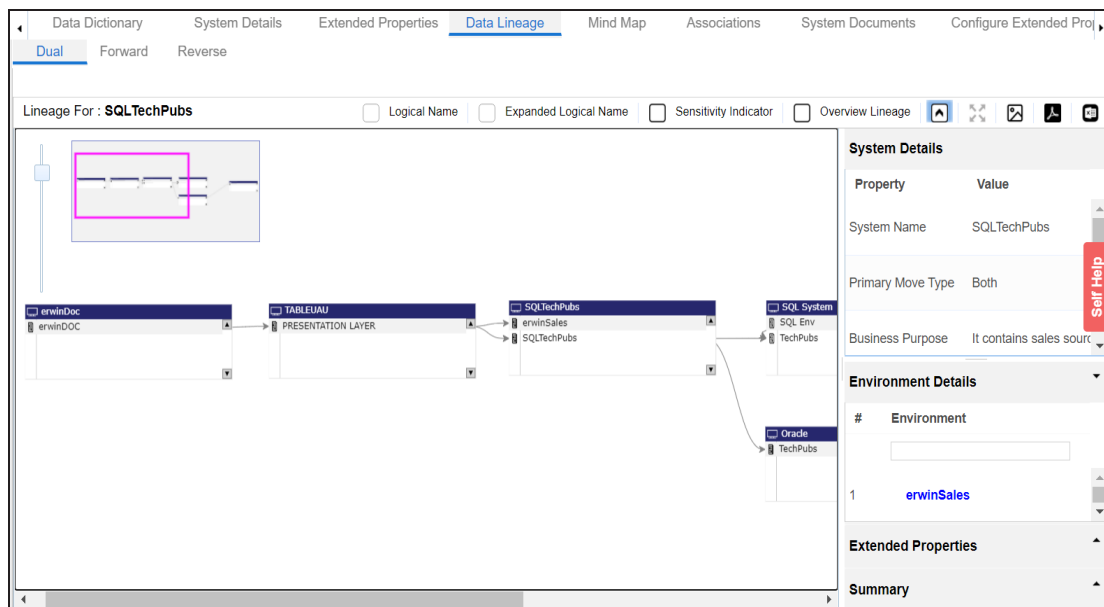

You can run forward and reverse lineage analysis to trace metadata at the system level. Forward lineage analysis generates lineage with the system as source. And, reverse lineage analysis generates lineage with the system as target. The Dual lineage analysis generates a lineage, which includes both forward and reverse lineage.

Viewing Lineage

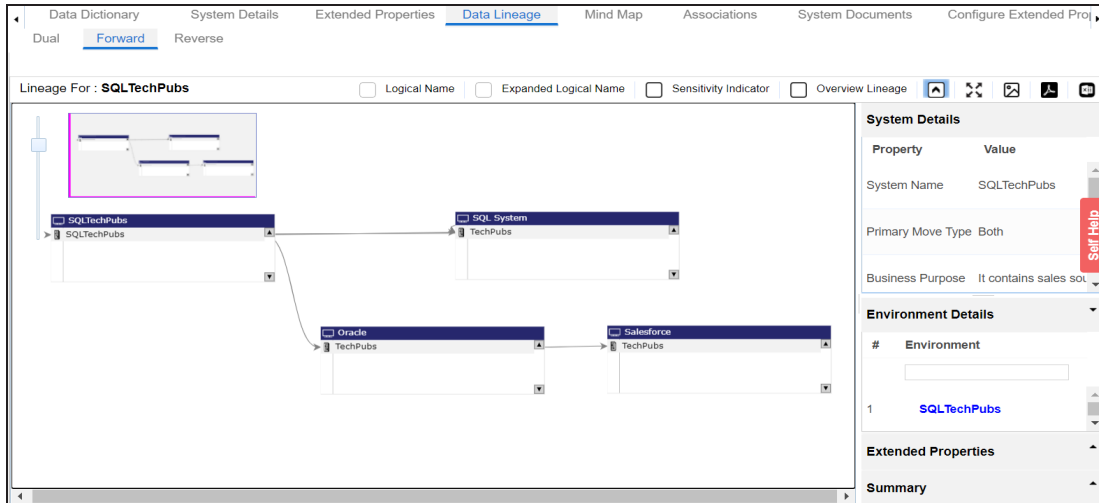

To run lineage analyzer at the system level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a system.
3. Click the **Data Lineage** tab.

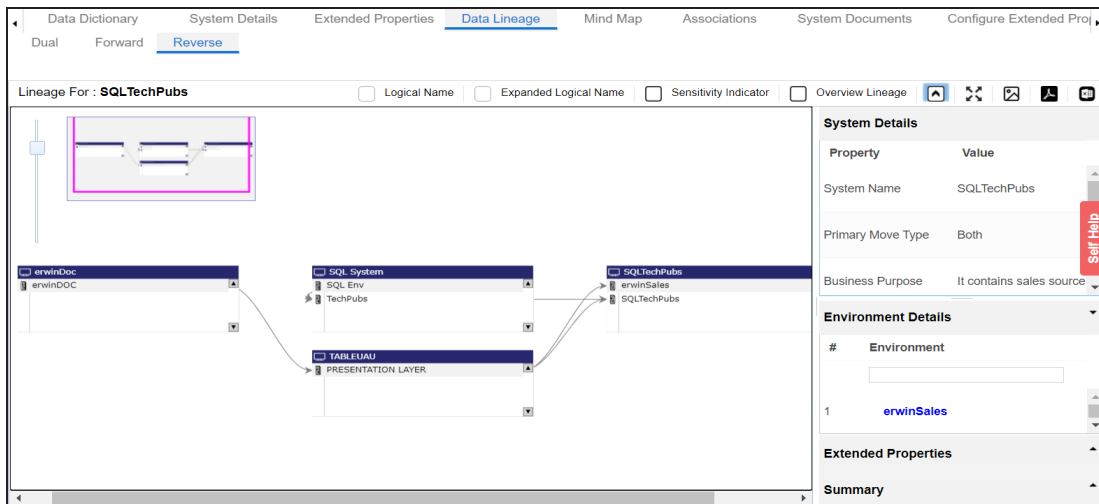

By default, the dual lineage of the system appears.

To view forward lineage, click the **Forward** tab.

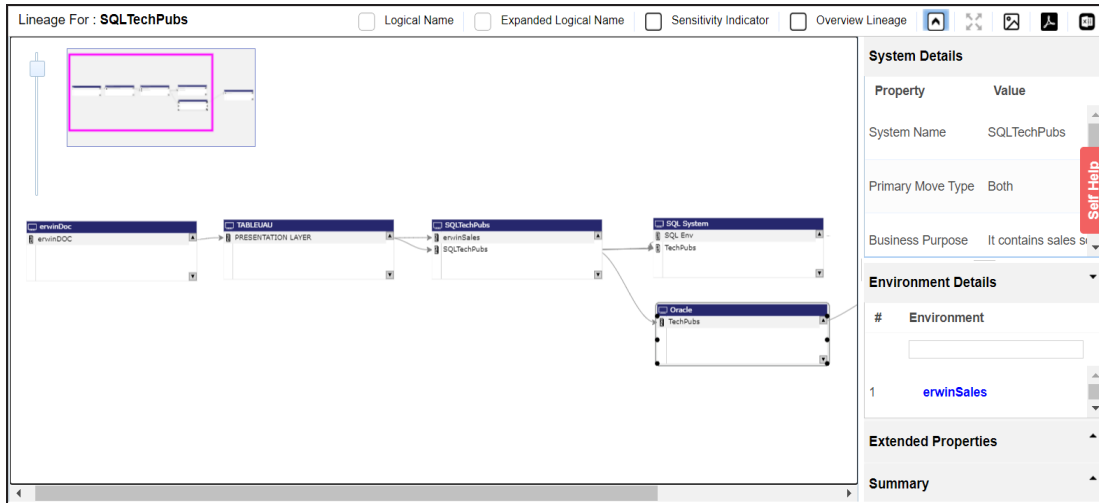

To view reverse lineage, click the **Reverse** tab.

Working on Lineage

Lineage of a system shows how metadata moves through systems. It provides a summary of environments used as source and target. Also, it gives you information about the systems and environments involved in the lineage.

For example, the following image displays a system's lineage.

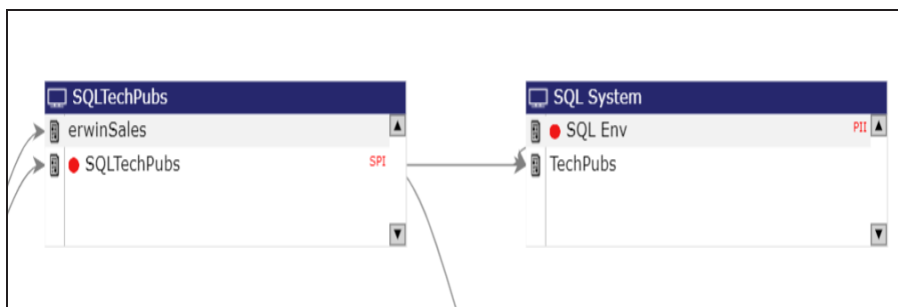

Use the following options:

Sensitivity Indicator

Use this option to view sensitivity of the environments in the lineage.

For example, in the following lineage, SQLTechPubs and SQL Env environments are sensitive.

Overview Lineage

Use this option to switch between detailed and overview lineage view.

Detailed lineage view: This view is helpful to technical users like ETL developers. When you reverse engineer ETL jobs or SQL scripts, the lineage might contain temporary tables, ETL components (filters, joiners, routers etc.). This view includes systems and environments, that do not exist in the Metadata Manager.

For example, the following lineage displays the erwinDOC system and erwinDOC environment. These do not exist in the Metadata Manager.

Overview lineage view: This view is helpful to business users. It excludes systems and environments that do not exist in the Metadata Manager.

For example, the following lineage does not display erwinDOC system and erwinDOC environment. These do not exist in the Metadata Manager.

Collapse/Expand (📁)

Use this option to switch between collapsed and expanded view. The expanded view includes environments involved in the lineage and the collapsed view excludes environments in the lineage.

For example, in the following lineage the collapsed view does not display environments involved in the lineage.

Auto Expand/Autofit (📏)

This switch is enabled when you use the expanded view (📁). Use this option to switch between the Auto Expand view and Auto Fit view. The Auto Expand view shrinks the space for the list of environments and the Autofit view expands the space to fit the list of environments.

For example, the following lineage displays the Auto Expand view.

Export to Image

Use this option to download the lineage in the JPG format.

Export to PDF

Use this option to download the lineage in the PDF format.

Export to Excel

Use this option to download the lineage in the XLSX format.

Highlighting Lineage Path of an Environment

To highlight an environment's lineage path, click the environment. The environment is highlighted in orange color, its forward lineage path appears in red, and its reverse lineage path appears in blue.

Systems that are not part of a lineage path disappear. For example, in the following lineage, the Oracle system disappears in the lineage path with respect to the erwinSales environment.

System Details

By default, this pane displays properties of a system for which, you ran lineage analysis. You can click a system in the lineage to view its properties in this pane.

Environment Details

By default, this pane displays a list of environments under the system for which, you ran lineage analysis.

You can click a system in the lineage to view list of environments under the system. You can then click <Environment_Name> to view lineage of the environment.

Environments that are not involved in lineage, are not included in the list.

Extended Properties

By default, this pane displays the extended properties of a system for which, you ran lineage analysis. You can click a system in the lineage to view its extended properties in this pane.

For more information, on configuring extended properties of a system, refer to the [System](#) topic.

Summary

This pane displays a summary of the lineage report. It gives information about number of environments acting as source, target, or both in the lineage.

Environment

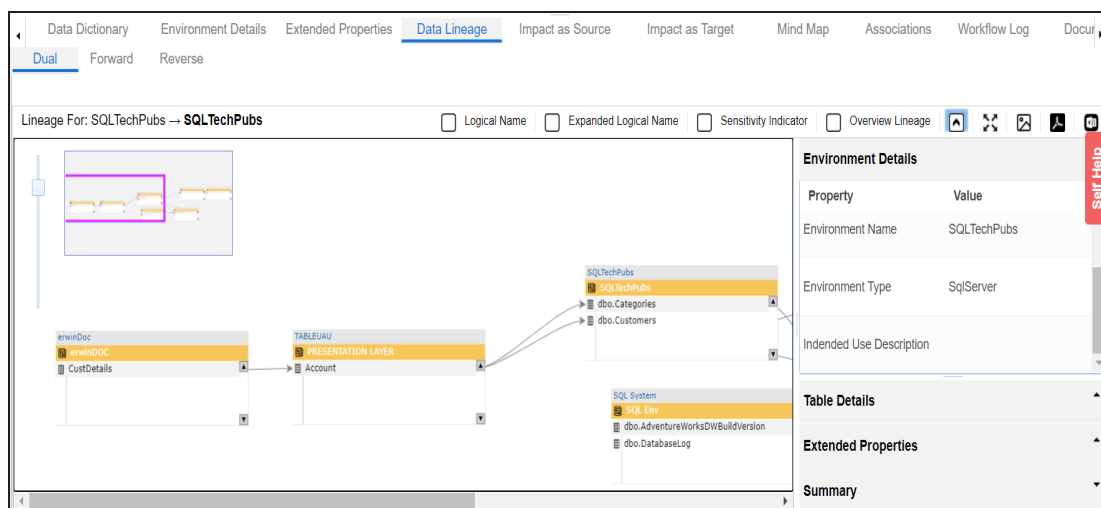

You can run forward and reverse lineage analysis to trace metadata at the environment level. Forward lineage analysis generates lineage with the environment as source. And, reverse lineage analysis generates lineage with the environment as target. The Dual lineage analysis generates a lineage, which includes both forward and reverse lineage.

Viewing Lineage

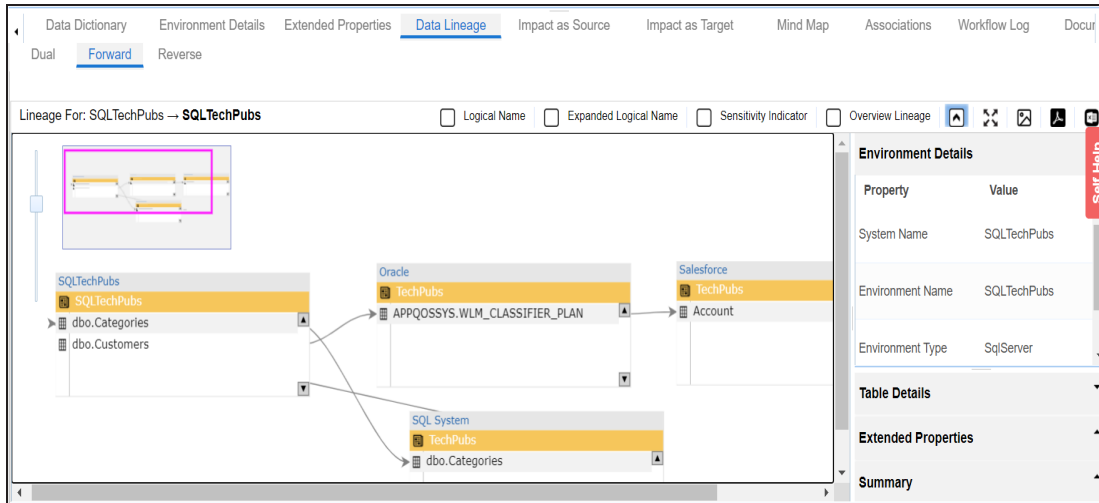

To run lineage analyzer at the environment level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click an environment.
3. Click the **Data Lineage** tab.

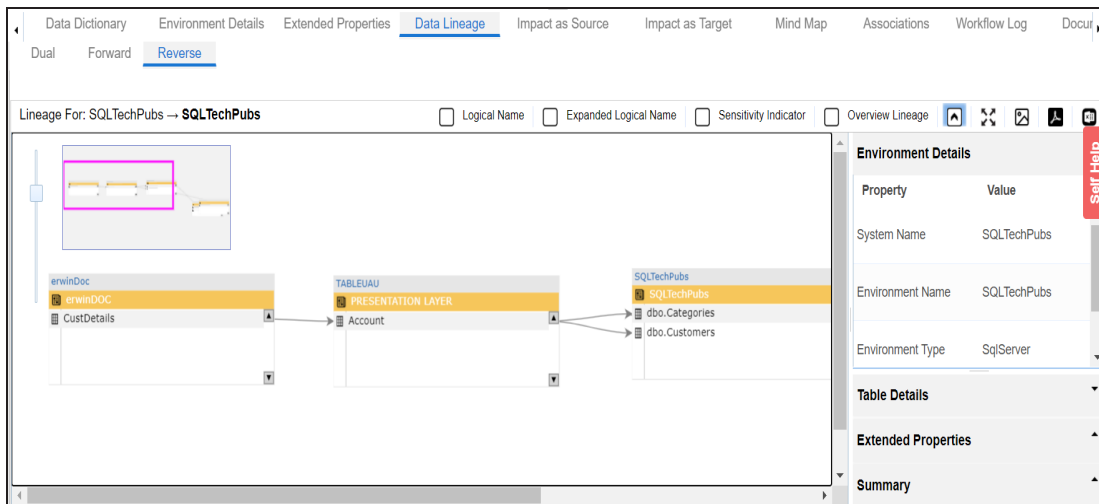

By default, dual lineage of the environment appears.

To view forward lineage of the environment, click the **Forward** tab.

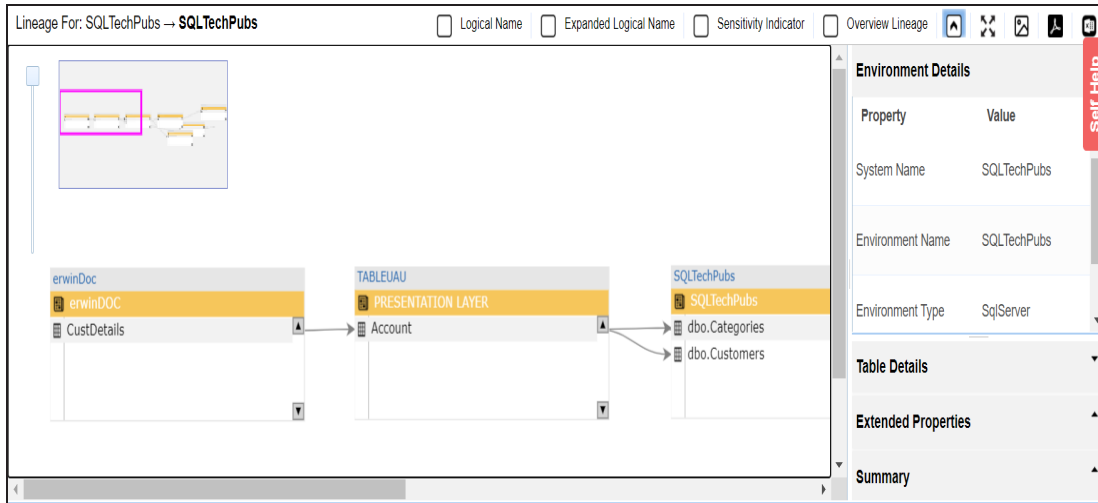

To view reverse lineage of the environment, click the **Reverse** tab.

Working on Lineage

Lineage of an environment shows how metadata moves through environments. It provides a summary of tables used as source and target. Also, it gives information about the environments and tables involved in the lineage.

For example, the following image displays an environment's lineage.

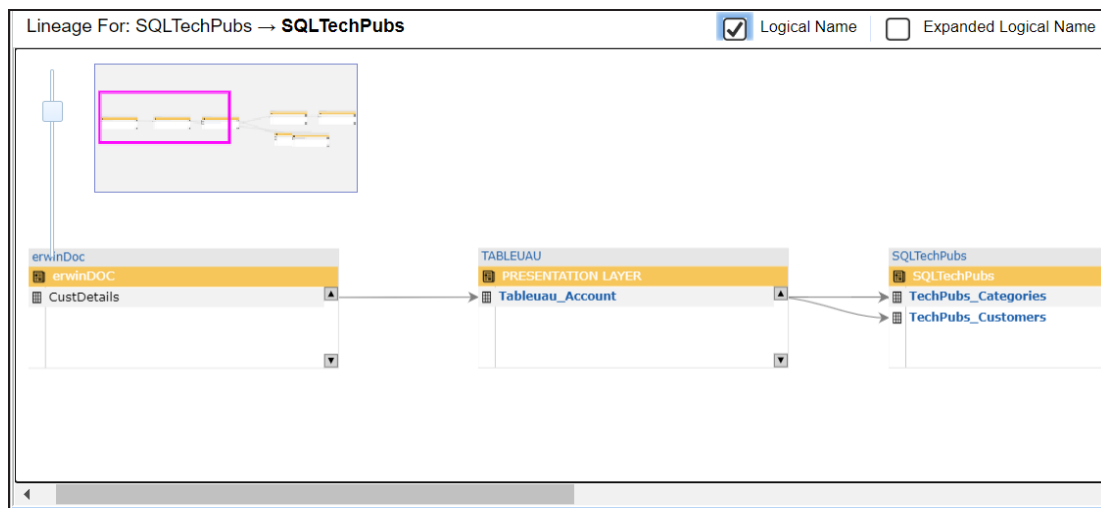

Use the following options:

Logical Name

Use this option to view logical names of the tables in the lineage.

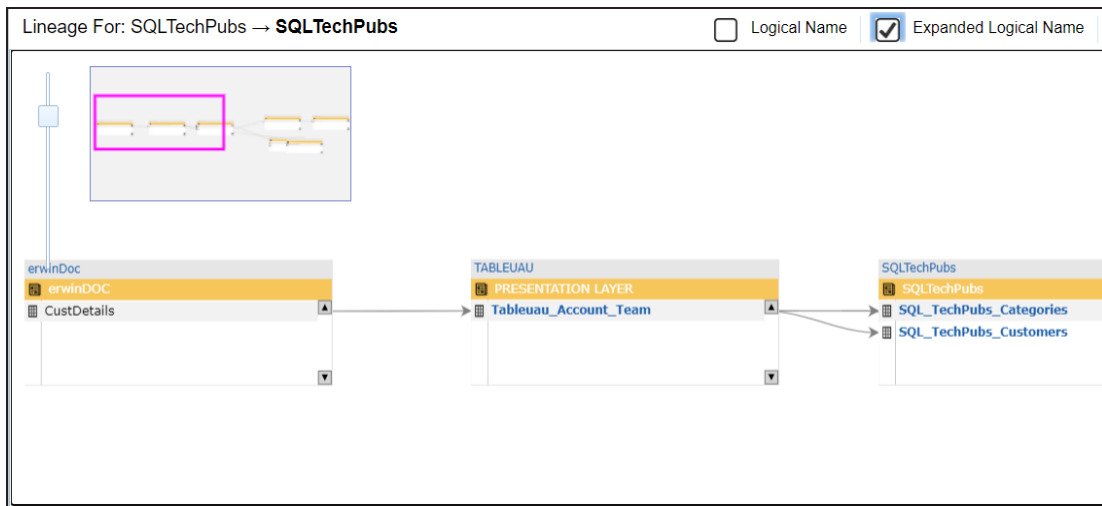

For example, in the following lineage, the table names are replaced with their logical names.

Expanded Logical Name

Use this option to view expanded logical names of the tables in the lineage.

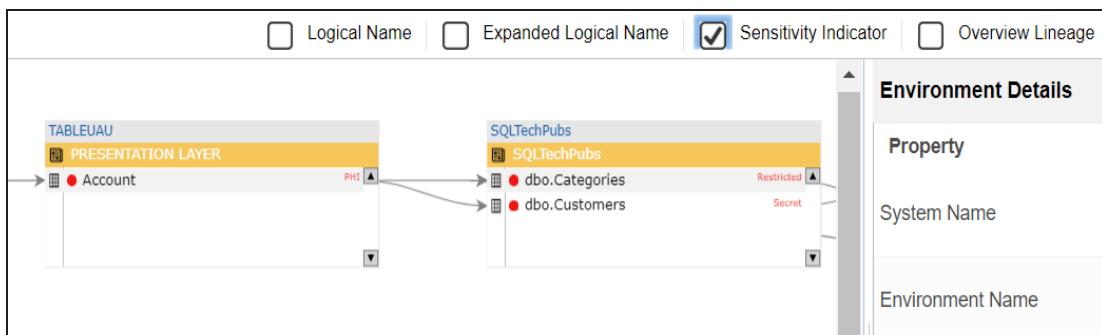

For example, in the following lineage, the table names are replaced with their expanded logical names.

Sensitive Data Indicator

Use this option to view sensitivity of tables in the lineage.

For example, the following lineage, displays the sensitivity of the tables.

Overview Lineage

Use this option to switch between detailed and overview lineage view.

Detailed lineage view: This view is helpful to technical users like ETL developers. When you reverse engineer ETL jobs or SQL scripts, the lineage might contain temporary tables, ETL components (filters, joiners, routers etc.). This view includes environments and tables that do not exist in Metadata Manager.

For example, the following lineage displays the erwinDOC environment and CustDetails table. These, do not exist in the Metadata Manager.

Overview lineage view: This view is helpful to business users. It excludes environments and tables that do not exist in the Metadata Manager.

For example, the following lineage does not display erwinDOC environment and CustDetails table. These, do not exist in the Metadata Manager.

Collapse/Expand (☑)

Use this option to switch between collapsed and expanded view. The expanded view includes tables involved in the lineage and the collapsed view excludes tables in the lineage.

For example, in the following lineage the collapsed view does not display tables involved in the lineage.

Auto Expand/Autofit (⌵)

This switch is enabled when you use the expanded view (⌵). Use this option to switch between the Auto Expand view and Auto Fit view. The Auto Expand view shrinks the space for the list of tables and the Autofit view expands the space to fit the list of tables.

For example, the following lineage displays the Auto Expand view.

Export to Image

Use this option to download the lineage in the JPG format.

Export to PDF

Use this option to download the lineage in the PDF format.

Export to Excel

Use this option to download the lineage in the XLSX format.

Highlighting Lineage Path of a Table

To highlight a table's lineage path, click the table. The table is highlighted in orange color, its forward lineage path appears in red, and its reverse lineage path appears in blue.

Environments that are not part of a lineage path disappear.

For example, in the following lineage, the TechPubs environment disappears in the lineage path with respect to the dbo.Categories table.

Environment Details

By default, this pane displays properties of an environment for which, you ran lineage analysis. You can click an environment in the lineage to view its properties in this pane.

Table Details

By default, this pane displays a list of tables under the environment for which, you ran lineage analysis.

You can click an environment in the lineage to view list of tables under the environment. You can then click <Table_Name> to view lineage of the table.

Tables that are not involved in lineage, are not included in the list.

Extended Properties

By default, this pane displays the extended properties of an environment for which, you ran lineage analysis. You can click an environment in the lineage to view its extended properties in this pane.

For more information, on configuring extended properties of an environment, refer to the [Environment](#) topic.

Summary

This pane displays a summary of the lineage report. It gives information about number of tables acting as source, target, or both in the lineage.

Table

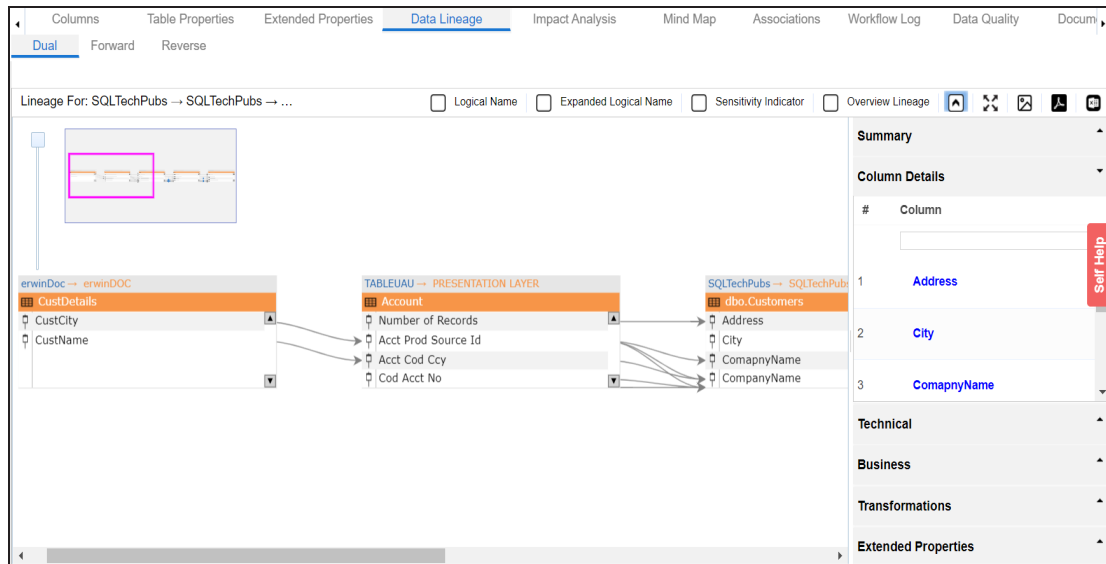

You can run forward and reverse lineage analysis to trace metadata at the table level. Forward lineage analysis generates lineage with the table as source. And, reverse lineage analysis generates lineage with the table as target. The Dual lineage analysis generates a lineage, which includes both forward and reverse lineage.

Viewing Lineage

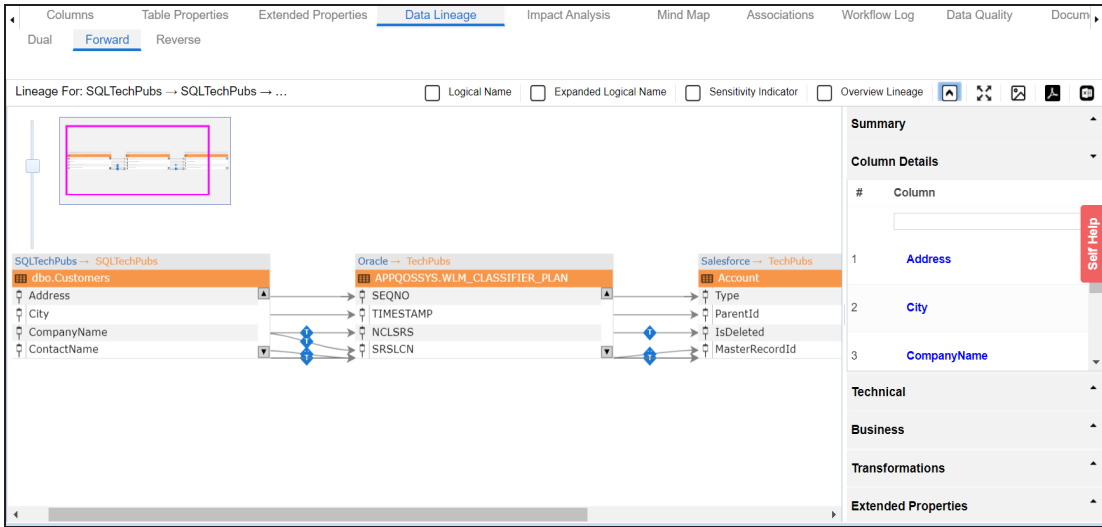

To run lineage analyzer at the table level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a table.
3. Click the **Data Lineage** tab.

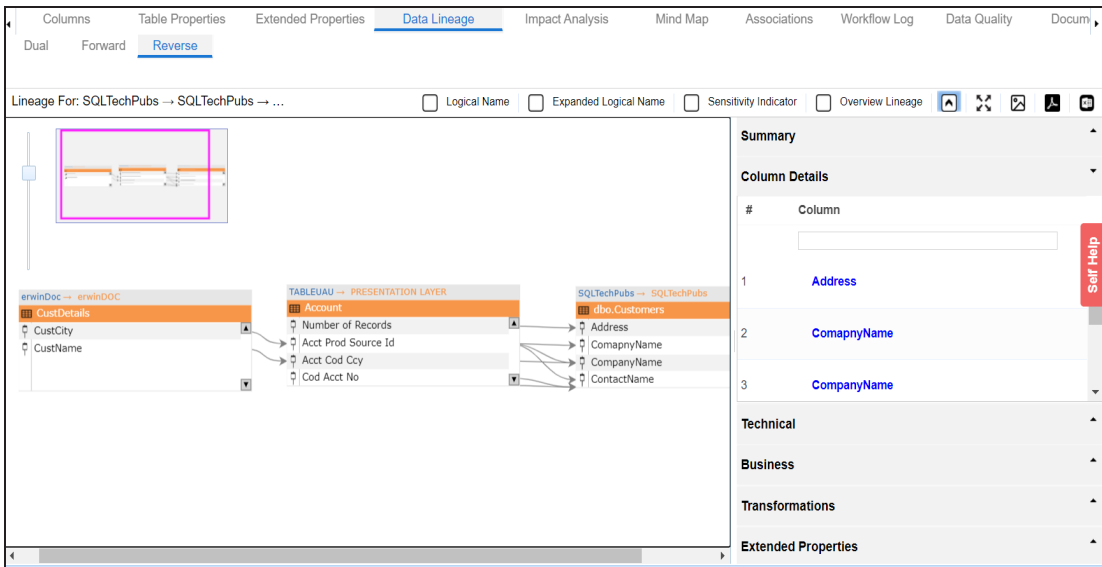

By default, dual lineage of the table appears.

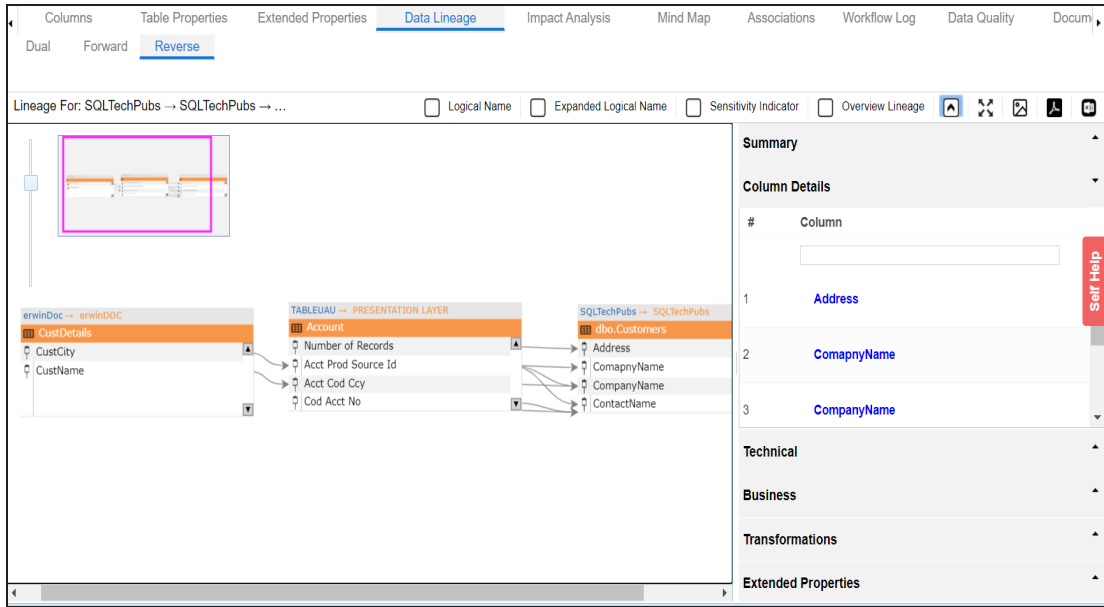

To view forward lineage of the table, click the **Forward** tab.

To view reverse lineage of the table, click the **Reverse** tab.

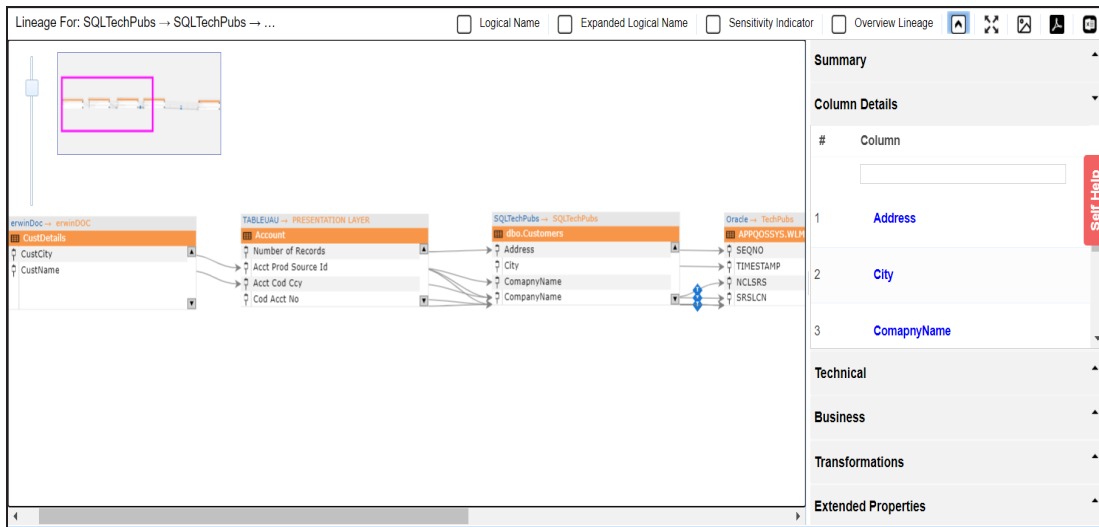

Working on Lineage

Lineage of a table shows how metadata moves through tables. It provides a summary of columns used as source and target. Also, it gives you information about the technical and business properties of columns involved in the lineage.

For example, the following image displays a table's lineage.

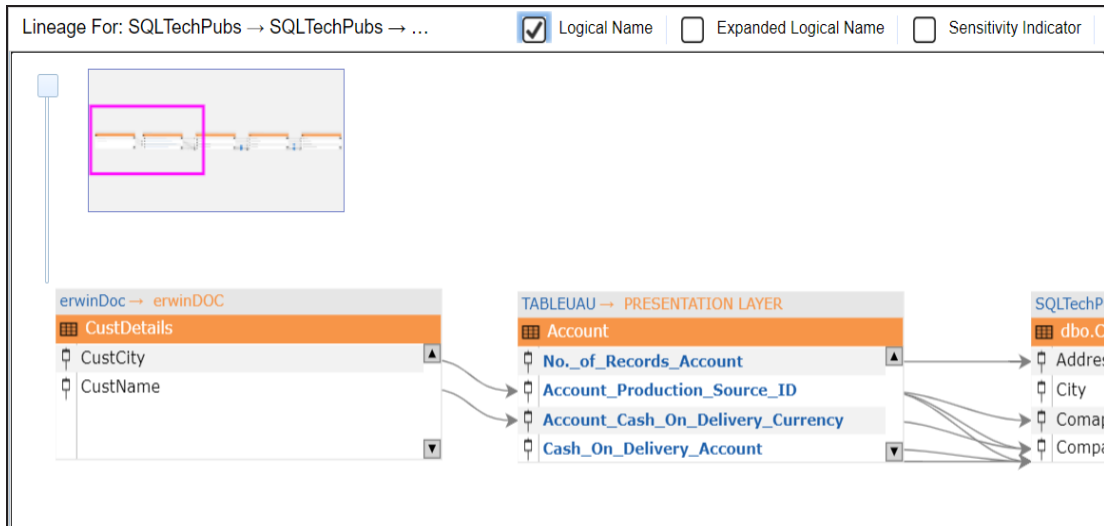

Use the following options:

Logical Name

Use this option to view logical names of columns in the lineage.

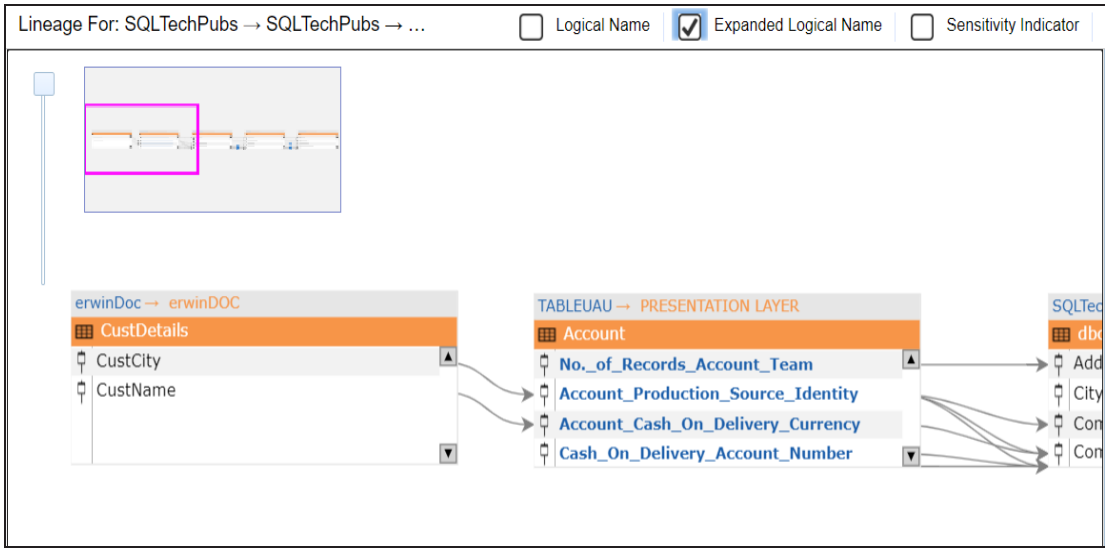

For example, in the following lineage, column names are replaced with their logical names.

Expanded Logical Name

Use this option to view expanded logical names of the columns in the lineage.

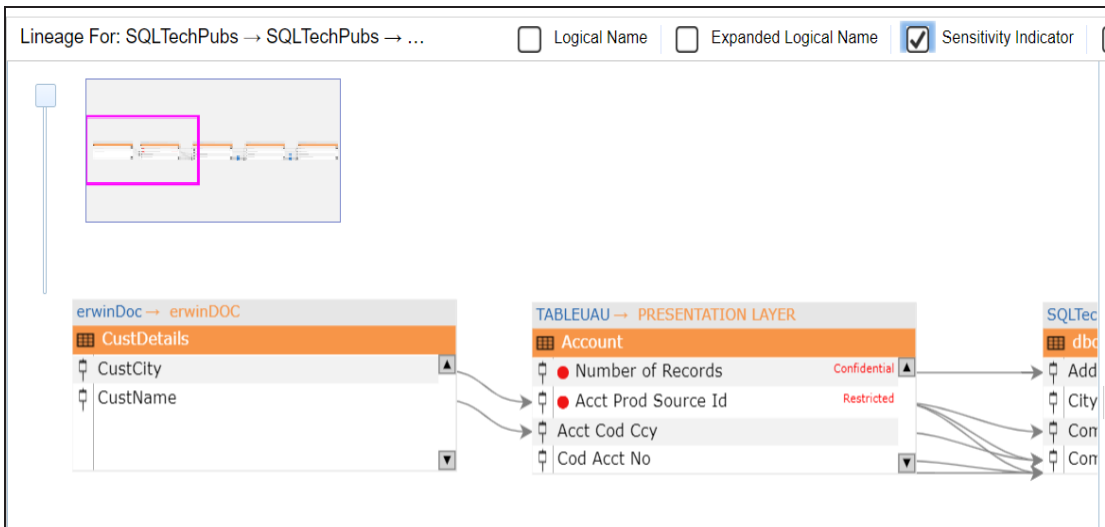

For example, in the following lineage, column names are replaced with their expanded logical names.

Sensitive Data Indicator

Use this option to view sensitivity of columns in the lineage.

For example, the following lineage displays the sensitivity of columns.

Overview Lineage

Use this option to switch between detailed and overview lineage view.

Detailed lineage view: This view is helpful to technical users like ETL developers. When you reverse engineer ETL jobs or SQL scripts, the lineage might contain temporary tables, ETL components (filters, joiners, routers etc.). This view includes tables and columns that do not exist in the Metadata Manager.

For example, the following lineage displays the CustDetails table that does not exist in the Metadata Manager.

Overview lineage view: This view is helpful to business users. It excludes tables and columns that do not exist in the Metadata Manager.

For example, the following lineage does not display CustDetails table that does not exist in the Metadata Manager.

Collapse/Expand (☑)

Use this option to switch between collapsed and expanded view. The expanded view includes columns involved in the lineage and the collapsed view excludes columns in the lineage.

For example, in the following lineage the collapsed view does not display columns involved in the lineage.

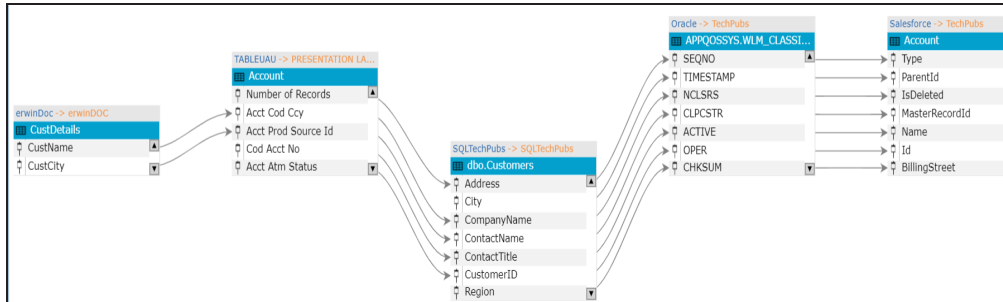

Auto Expand/Autofit (↕)

This switch is enabled when you use the expanded view (☑). Use this option to switch between the Auto Expand view and Auto Fit view. The Auto Expand view

shrinks the space for the list of columns and the Autofit view expands the space to fit the list of columns.

For example, the following lineage displays the Auto Expand view.

Export to Image

Use this option to download the lineage in the JPG format.

Export to PDF

Use this option to download the lineage in the PDF format.

Export to Excel

Use this option to download the lineage in the XLSX format.

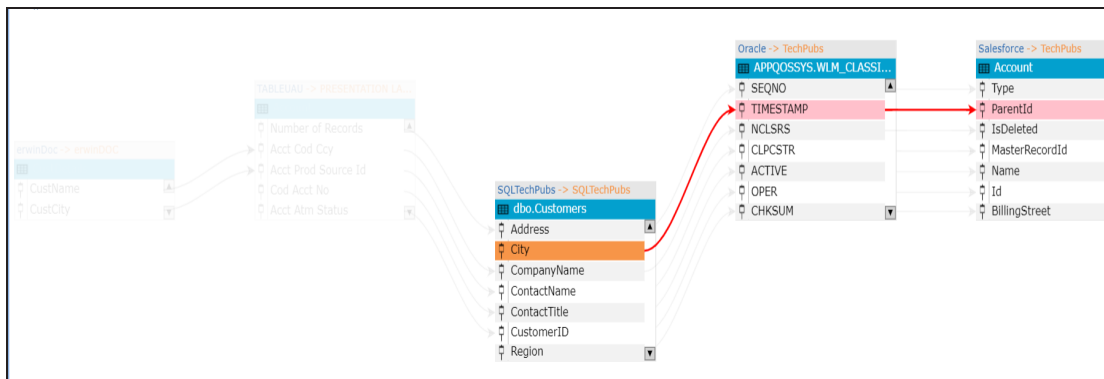

Highlighting Lineage Path of a Column

To highlight a column's lineage path, click the column. The column is highlighted in orange color, its forward lineage path appears in red, and its reverse lineage path appears in blue.

Tables that are not part of a lineage path disappear.

For example, in the following lineage, the CustDetails and Account table disappear in the lineage path with respect to the City column.

Summary

This pane displays a summary of the lineage report. It gives information about number of columns acting as source, target, or both in the lineage.

Column Details

By default, this pane displays a list of columns under the table for which, you ran lineage analysis.

You can click a table in the lineage to view list of columns under the table. You can then click <Column_Name> to view lineage of the column.

Columns that are not involved in lineage, are not included in the list.

Technical

This pane displays technical properties of a table. By default, it displays the technical properties of the table for which, you ran lineage analysis. You can click a table in the lineage and view its technical properties. The technical properties of a table include System Name, Environment Name, Table Name, and so on. For more information on updating table properties, refer to the [Updating Table Properties](#) topic.

Business

This pane displays business properties of a table. By default, it displays the business properties of the table for which, you ran lineage analysis. You can click a table in the

lineage and view its business properties. The business properties of a table include Logical Table Name, Table Definition, Expanded Logical Name, and so on. For more information on updating table properties, refer to the [Updating Table Properties](#) topic.

Transformations

To view transformations between two columns, click the link between the columns. The transformations pane expands and displays the transformations.

You can expand the transformation node to view the transformation details that includes Business Rule, Extended Business Rule, Trans lookup Condition, and Lookup On.

Extended Properties

By default, this pane displays the extended properties of a table for which, you ran the lineage analysis. You can click a table in the lineage to view its extended properties in this pane. For more information on configuring extended properties of tables, refer to the [Table](#) topic.

Column

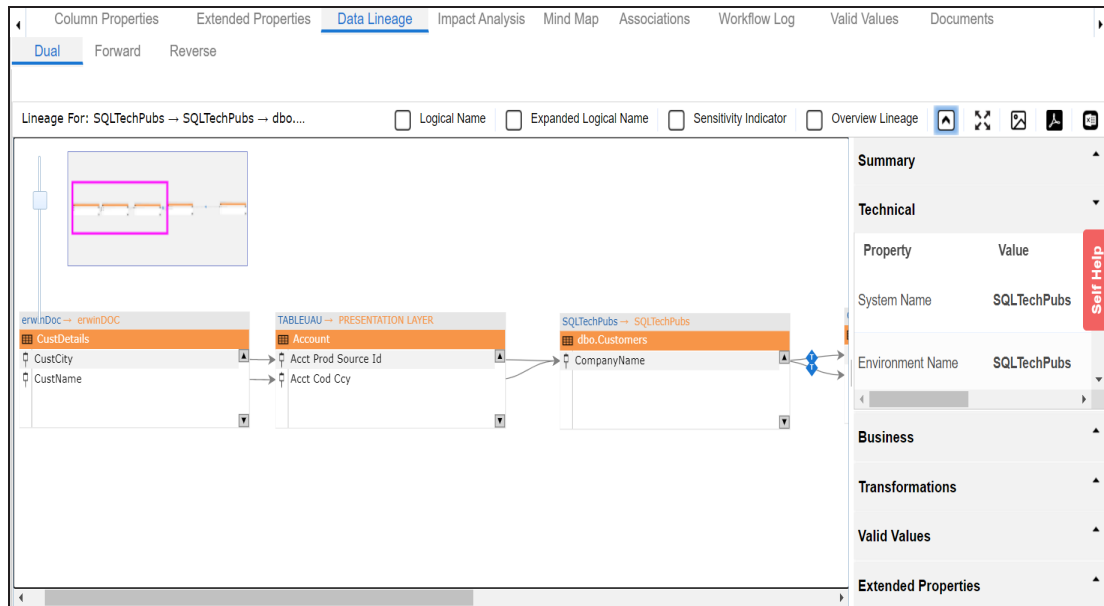

You can run forward and reverse lineage analysis to trace metadata at the column level. Forward lineage analysis generates a lineage with the column as source. And, reverse lineage analysis generates a lineage with the column as target. The Dual lineage analysis generates a lineage, which includes both forward and reverse lineage.

Viewing Lineage

To run lineage analyzer at the column level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a column.
3. Click the **Data Lineage** tab.

By default, dual lineage of the column appears.

To view forward lineage, click the **Forward** tab.

Working on Lineage

Lineage of a column shows how metadata moves through columns. It provides a summary of columns used as source and target. Also, it gives information about technical and business properties of columns involved in the lineage.

For example, the following image displays a column's lineage.

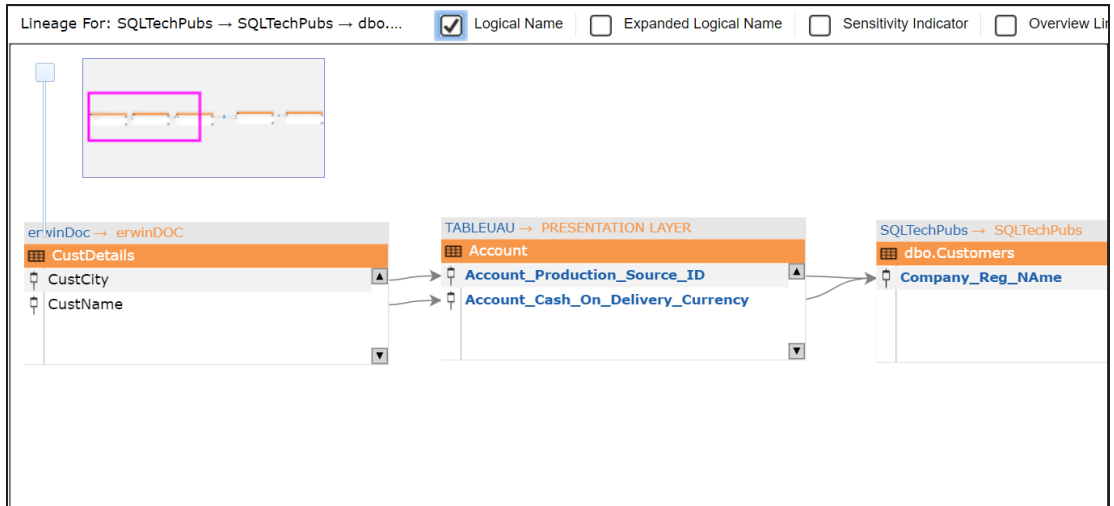

Use the following options:

Logical Name

Use this option to view logical names of the columns in the lineage.

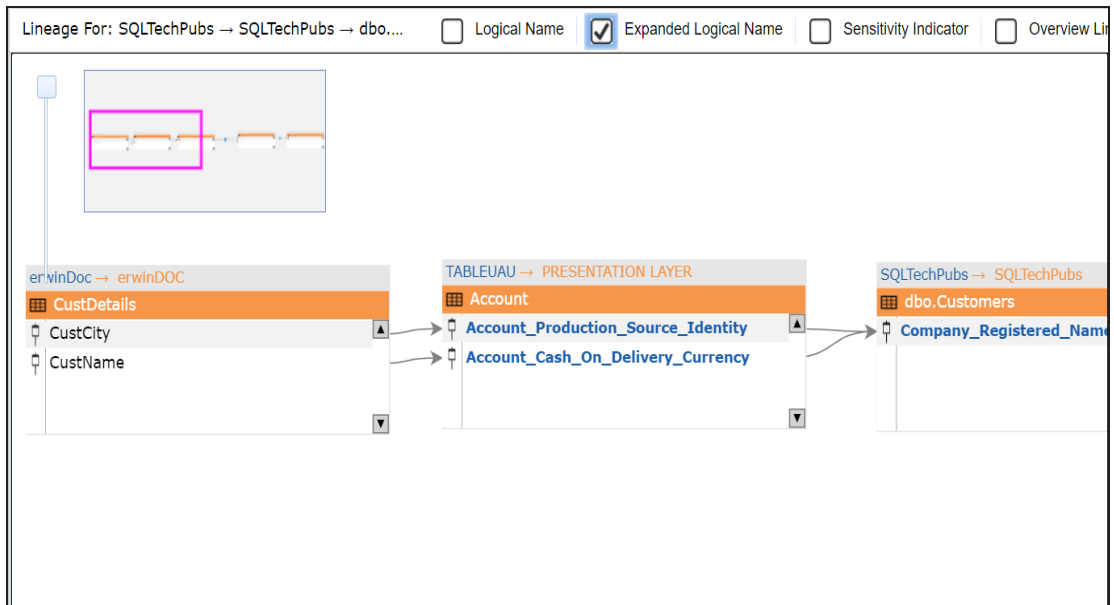

For example, in the following lineage the column names are replaced with their logical names.

Expanded Logical Name

Use this option to view expanded logical names of the columns in the lineage.

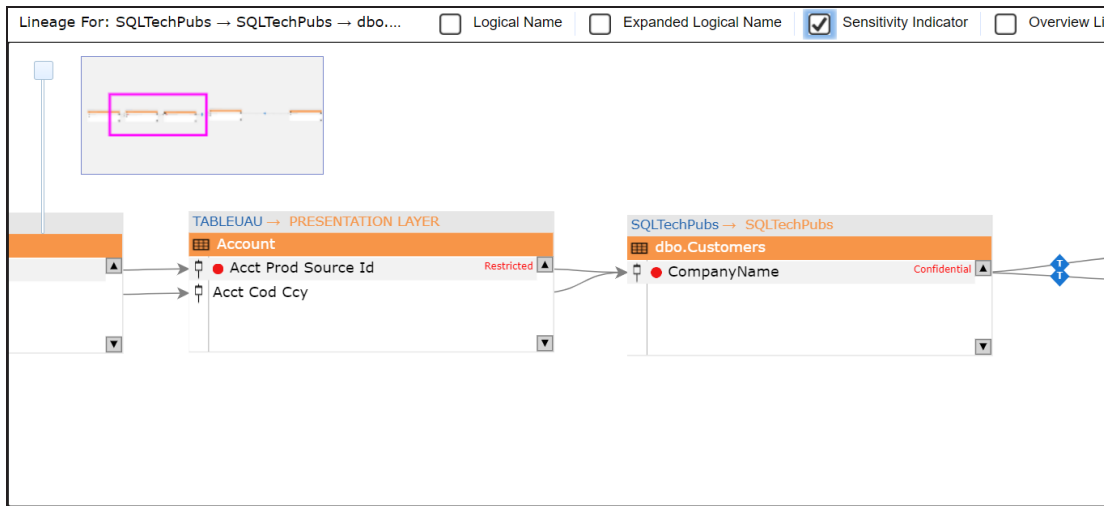

For example, in the following lineage the column names are replaced with their expanded logical names.

Sensitivity Indicator

Use this option to view sensitivity of columns in the lineage.

For example, the following lineage displays the sensitivity of the columns.

Overview Lineage

Use this option to switch between detailed and overview lineage view.

Detailed lineage view: This view is helpful to technical users like ETL developers. When you reverse engineer ETL jobs or SQL scripts, the lineage might contain temporary tables, ETL components (filters, joiners, routers etc.). This view includes tables and columns that do not exist in the Metadata Manager.

For example, the following lineage displays the CustDetails table that does not exist in the Metadata Manager.

Overview lineage view: This view is helpful to business users. It excludes tables and columns that do not exist in the Metadata Manager.

For example, the following lineage does not display CustDetails table that does not exist in the Metadata Manager.

Collapse/Expand (☑)

Use this option to switch between collapsed and expanded view. The expanded view includes columns involved in the lineage and the collapsed view excludes columns in the lineage.

For example, in the following lineage the collapsed view does not display columns involved in the lineage.

Auto Expand/Autofit (↕)

This switch is enabled when you use the expanded view (☒). Use this to switch between the Auto Expand view and Auto Fit view. The Auto Expand view shrinks the space for the list of columns and the Autofit view expands the space to fit the list of columns.

For example, the following lineage displays the Auto Expand view.

Export to Image (🖨)

Use this option to download the lineage in the JPG format.

Export to PDF (📄)

Use this option to download the lineage in the PDF format.

Export to Excel

Use this option to download the lineage in the XLSX format.

Highlighting Lineage Path of a Column

To highlight a column's lineage path, click the column. The column is highlighted in orange color, its forward lineage path appears in red, and its reverse lineage path appears in blue.

Tables that are not part of a lineage path disappear.

For example, in the following lineage, the Account table disappears in the lineage path with respect to the SRSLCN column.

Summary

This pane displays a summary of the lineage report. It gives information about number of columns acting as source, target, or both in the lineage.

Technical

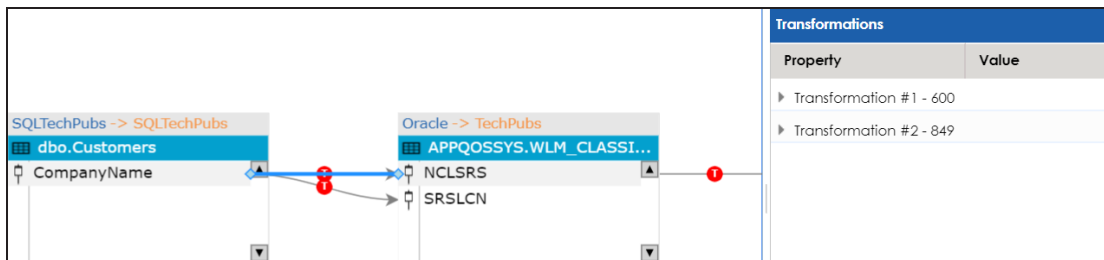

By default, this pane displays technical properties of the column for which, you ran lineage analysis. You can click a column in the lineage and view its technical properties. The technical properties of a column include Column Data Type, Column Precision, Column Length, and so on. For more information on updating column properties, refer to the [Updating Column Properties](#) topic.

Business

By default, this pane displays business properties of the column for which, you ran the lineage analysis. You can click a column in the lineage and view its business properties. The business properties of a column include Column Definition, Logical Column Name, Column Class, and so on. For more information on updating column properties, refer to the [Updating Column Properties](#) topic.

Transformations

To view transformations between two columns, click the link between the columns. The Transformations pane expands and displays the transformations.

You can expand the transformation node to view the transformation details that includes Business Rule, Extended Business Rule, Trans lookup Condition, and Lookup On.

Transformations	
Property	Value
Target Column Scale	
Business Rule	UPPER
Extended Business Rule	
Trans lookup Condition	SELECT CompanyName FROM db dbo.Customers.CompanyName
Lookup On	CompanyName

Valid Values

To view valid values for a column, Click a column in the lineage, expand the Valid Values pane, and click the **Click Here** hyperlink. For more information on assigning valid values using codesets, refer to the [Assigning Codesets to Columns](#) topic.

Extended Properties

By default, this pane displays the extended properties of the column for which, you ran the lineage analysis. You can click a column in the lineage to view its extended properties in this pane. For more information on configuring extended properties of columns, refer to the [Column](#) topic.

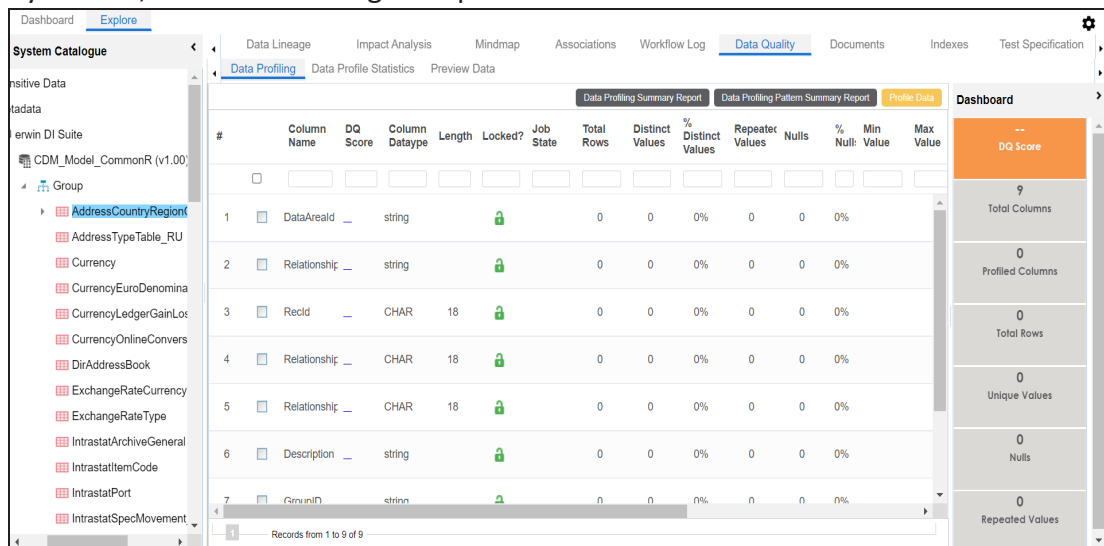

Previewing Data

You can preview data at table level using SQL queries. Data previewing capability at table level enables you to view data instantly and profile the data. You can also schedule a data profiling job and view data profiling summary report at the scheduled time.

To preview table data, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a table.
3. Click the **Data Quality** tab.

By default, the Data Profiling tab opens.

#	Column Name	DQ Score	Column Datatype	Length	Locked?	Job State	Total Rows	Distinct Values	% Distinct Values	Repeater Values	Nulls	% Null	Min Value	Max Value
1	DataAreald		string		🔒		0	0	0%	0	0	0%		
2	Relationship		string		🔒		0	0	0%	0	0	0%		
3	RecId		CHAR	18	🔒		0	0	0%	0	0	0%		
4	Relationship		CHAR	18	🔒		0	0	0%	0	0	0%		
5	Relationship		CHAR	18	🔒		0	0	0%	0	0	0%		
6	Description		string		🔒		0	0	0%	0	0	0%		
7	GroupID		string		🔒		0	0	0%	0	0	0%		

4. Click the **Preview Data** tab.

The User Credentials page appears. For more information on enforcement of user credentials, refer to the [Enforcing Credentials for Data Access or Preview](#) topic.

You can also [profile data at table level](#) and provide data quality score.

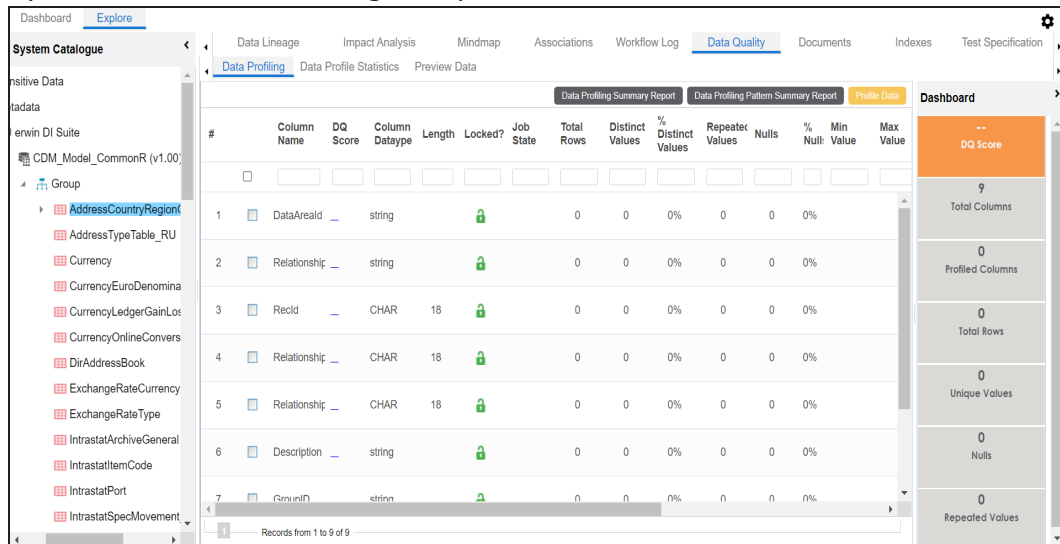

Profiling Data at Table Level

You can assess your data quality by profiling the data at table level. You need to schedule a data profiling job and provide the data quality score by assessing the data quality.

To profile data at table level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click a table.
3. Click **Data Quality**.

By default, the Data Profiling tab opens.

The screenshot shows the Data Quality tab in the System Catalogue pane. The table displays the following data:

#	Column Name	DQ Score	Column Datatype	Length	Locked?	Job State	Total Rows	Distinct Values	% Distinct Values	Repeater Values	Nulls	% Null Value	Min Value	Max Value
1	DataAreaid	--	string		🔒		0	0	0%	0	0	0%		
2	Relationship	--	string		🔒		0	0	0%	0	0	0%		
3	Recid	--	CHAR	18	🔒		0	0	0%	0	0	0%		
4	Relationship	--	CHAR	18	🔒		0	0	0%	0	0	0%		
5	Relationship	--	CHAR	18	🔒		0	0	0%	0	0	0%		
6	Description	--	string		🔒		0	0	0%	0	0	0%		
7	GenusID	--	string		🔒		0	0	0%	0	0	0%		

The dashboard on the right shows the following metrics:

- Total Columns: 9
- Profiled Columns: 0
- Total Rows: 0
- Unique Values: 0
- Nulls: 0
- Repeated Values: 0

4. Select columns.
5. Click the **Profile Data** button.

The User Credentials page appears. For more information on enforcement of user credentials, refer to the [Enforcing Credentials for Data Access or Preview](#) topic.

Data Profiling Pattern Summary

To view data profiling pattern summary report, click **Data Profiling Pattern Summary Report**.

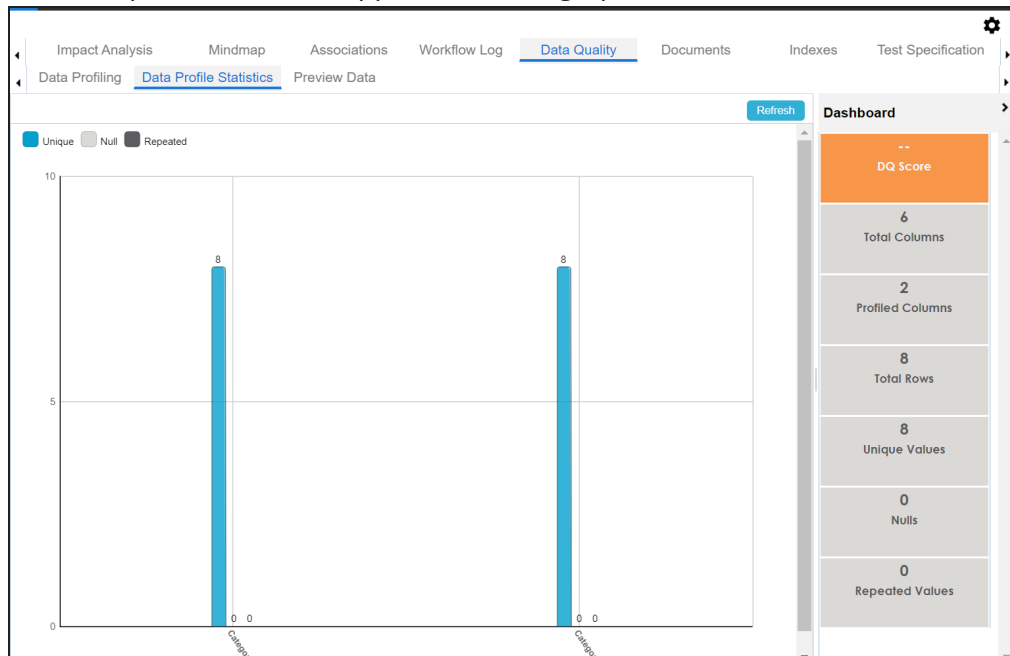

The Data Profiling Pattern Summary page appears.

Data Profile Statistics

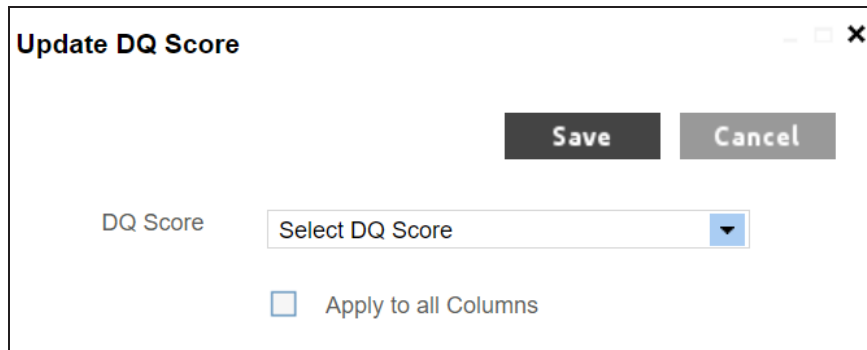

To view data profile statistics, click **Data Profile Statistics**.

The data profile statistics appears in a bar graph.

Click **DQ Score**.

The Update DQ Score page appears.

The screenshot shows a dialog box titled "Update DQ Score" with standard window controls (minimize, maximize, close) in the top right corner. At the top right of the dialog are two buttons: "Save" and "Cancel". Below these buttons is a label "DQ Score" followed by a dropdown menu with the text "Select DQ Score" and a downward arrow. At the bottom of the dialog is a checkbox labeled "Apply to all Columns".

Select **DQ Score** and click **Save**. The DQ Score is updated.

Viewing Mind Maps

A mind map displays the pictorial representation of a technical asset and its association with other business and technical assets. Technical assets refer to systems, environments, tables, and columns. Business assets refer to business terms, business policies, business rules, and other business assets as defined in the Business Glossary Manager Settings.

You can view and analyze Mind Maps in following views:

- Logical View
- Conceptual View

You can select an asset on a mind map and view its properties, association statistics, and sensitivity under the Object Properties pane.

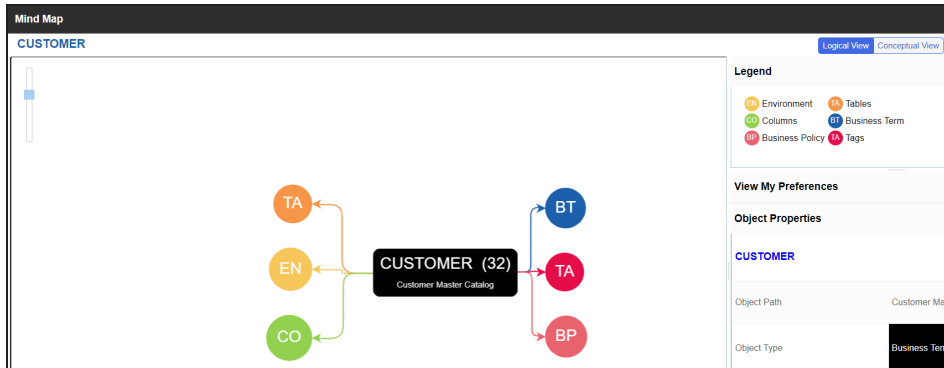

To view mind maps, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager**.
2. In the **System Catalogue** pane, click a <Technical_Asset>.
3. In the right pane, click the **Mind Map** tab.

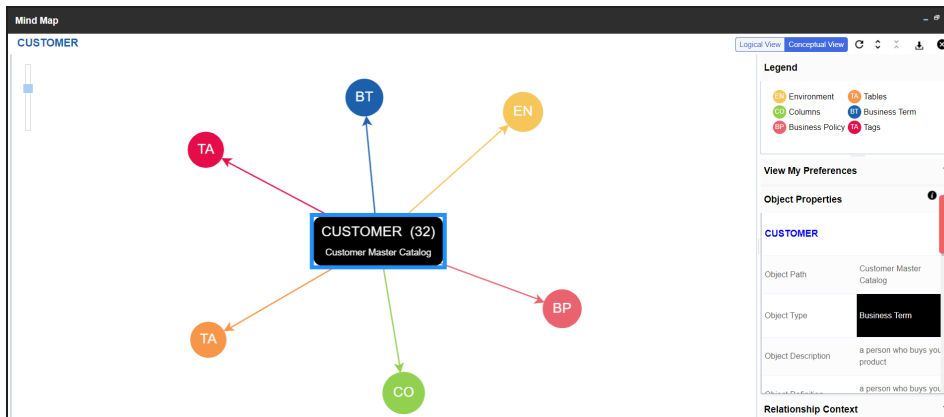

The Mind Map page appears and the Logical View opens by default.

For example, if you click an environment in the System Catalogue pane and then click the Mind Map tab, the mind map of the environment appears.

4. On the Mind Map page, you can click **Logical View** or **Conceptual View** to switch between them:
 - **Logical View:** The logical view displays the associated technical assets on the left side and associated business assets on the right of the business asset. Selecting an asset on the mind map displays its properties in the Object Properties pane.

- Conceptual View:** The logical view displays the associated technical assets in non-hierarchical representation. Selecting an asset on the mind map displays its properties in the Object Properties pane.

5. Use the following options to work on the mind map:

Reload Diagram (🔄)

Use this option to reload the mind map.

Expand Diagram (📏)

Use this option to expand the mind map to view the associated technical and business assets.

Reset Diagram to Original View (🗑️)

Use this option to collapse the expanded nodes and restore the mind map to its original form.

Export (↓)

Use this option to export the mind map. Hover over **Export** and use the following options:

Mind Map - Excel Report: Use this option to download the mind map in the .xlsx format. Ensure that you expand the mind map before downloading the report.

Mind Map - Image: Use this option to download the mind map as an image, in the .jpg format. Ensure that you expand the mind map before downloading the mind map image.

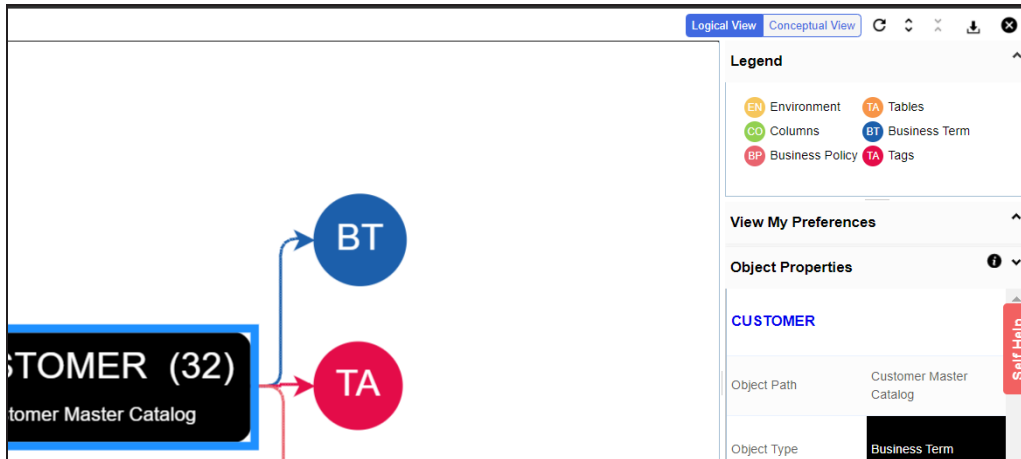

Sensitivity Details - Excel Report: Use this option to download the sensitivity report of all associated assets in the .xlsx format. This report includes sensitive data indicator (SDI), SDI classification, and SDI description of the associated assets.

You can use the following panes to view properties and configure preferences for the mind map:

- [Legend](#)
- [View My Preferences](#)
- [Object Properties](#)
- [Overview](#)

Legends

Use legends to identify the list of components on the mind map.

View My Preferences

You can set your preferences to view the mind map according to your requirements. The available settings differ based on the logical and conceptual view. Expand the **View My Preferences** pane and use the following options:

Qualifier

Use the **Show Qualified View** option to display associated assets with other business and technical assets that are created using a unique qualifier. For more information about creating associations using a qualifier, refer to the [Setting Up Associations Using Qualifiers](#) topic.

Asset Hierarchy

Use the following options to view asset hierarchy:

- **Gray Background:**
Use this option to display gray colored background for the asset hierarchy nodes. For example, the following mind map displays nodes in the hierarchy with a gray-colored background.

This option is only available for Logical View.

- **Show Asset Hierarchy/Show Hierarchy:**
Use this option to view hierarchy of all the assets in a mind map.

Relationship Options

Use the following options to configure relationship options:

- **Include Relationships:** Select the check box to display relationships between the assets on the mind map.
- **Switch to Enterprise Relationship configuration:** Select the check box to apply the selected line color and type configured in the [Business Glossary Manager Settings](#).

For example, in the following mind map, the relationships (is a Synonym of and is Parent Of) and the line color as set in Business Glossary Manager Settings appear on the mind map.

View Logical Names

Use the following options to view logical and expanded logical names of tables and columns on the mind map:

- **Logical Names:** Select the check box to view logical names of tables and columns on the mind map.
- **Expanded Logical Names:** Select the check box to view expanded logical names of tables and columns on the mind map.

You can configure logical names and expanded logical names of [tables](#) and [columns](#) in Metadata Manager.

For example, the following mind map displays logical names and expanded

logical names.

View Sensitivity

Use the following options to view sensitivity details of the assets on the mind map:

Filters

Use the following filter options to select information availability on mind maps:

- **By Asset Type:** Use this option to filter and display asset types on the mind map.
- **By Relationship:** Use this option to filter and display assets on the mind map based on relationships.

For example, in the By Asset Type list, select Column and in the By Relationship list select is associated with. Doing this displays only those columns that have the is associated type of relationship with the asset.

- **Sensitivity Data Indicator(Y/N):** Select the check box to indicate whether an asset is classified as sensitive.
- **Sensitive Data Classification:** Select the check box to view the sensitivity classification of assets.

For example, the following mind map displays the sensitive data indicator as sensitive (🔒) and sensitive data classification as Confidential.

For more information on updating asset's sensitivity in mind maps, refer to the [Updating Sensitivity](#) topic.

Object Properties

Expand the Object Properties pane to view the selected asset's information such as its path, type, association statistics, data governance responsibilities, and sensitivity classification of an asset.

Overview

Expand this pane to open a panned view of the mind map. You can drag the purple box to move across the mind map and focus on specific areas.

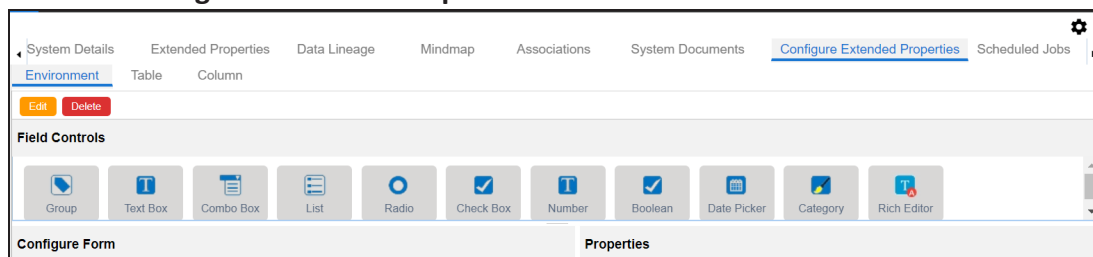

Configuring Extended Properties

You can configure user-defined properties for technical assets. First, you need to set up a form and then use it to configure user-defined extended properties.

At the system level, you can configure extended properties for three objects, environments, tables, and columns. Extended properties configured at the system level for these objects are applicable to all objects under the system. For example, extended properties configured at system level for environments are applicable to all the environments under the system.

To configure extended properties at the system level, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, click the required system.
3. Click the **Configure Extended Properties** tab.

The Configure Extended Properties tab contains the following sections:

- **Field Controls:** Use this pane to get the required UI elements.
 - **Configure Form:** Use this pane to design forms using the UI elements available in the **Field Controls** pane.
 - **Properties:** Use this pane to view the properties of the UI element selected in the **Configure Form** pane.
4. Use the following tabs:

Environment

Use this tab to configure extended properties for environments under the selected system.

Table

Use this tab to configure extended properties for tables under the selected system.

Column

Use this tab to configure extended properties for columns under the selected system.

- On these tabs, click **Edit**. Then, double-click or drag and drop the required UI elements from the **Field Controls** pane to the **Configure Form** pane.
- Select UI elements, one at a time, and configure their properties in the **Properties** pane.

Property	Value
Published	<input checked="" type="checkbox"/>
Field	Surrounded By
Type	Text Box
Dependencies	Type or click here
Configure Values	<input type="button" value="Configure"/>

The available properties differ based on the type of UI element.

Refer to the following table for property descriptions:

Property	Description
Published	Switch Published to ON to publish the field.
Field	Specifies the field label. To change the field labels, double-click the corresponding Value cell.

Property	Description
	For example, Metadata Scanned On.
Type	Specifies the type of the field. To select field types, double-click the corresponding Value cell.
Dependencies	Defines the pick list fields that can be used as controlling fields. It works only with the Reference Data Manager connector. To define pick list fields, select the fields from the drop down option.
Configure Values	Specifies the connectors for the field. To configure option values, click Configure Values . Use the following options: <ul style="list-style-type: none"> ▪ Default connector: Use this option to enter option values manually or using an XLSX file. ▪ Reference Data Manager: Use this option to pull option values from reference tables in the Reference Data Manager.
Mandatory	Specifies whether the field is mandatory.
Description	Specifies the field description. To enter field descriptions, double-click the corresponding Value cell.
Visible in Extended Properties	Switch Visible in Extended Properties to ON to make it visible on the Extended Properties tab.
Order	Specifies the order of the field on the Extended Properties tab. To enter the order number, double-click the corresponding Value cell. You can also drag and move fields in the Configure Form pane to change their order.

7. Click **Save**.

The form is saved and is available on the Extended Properties tab of the selected object (Environment, Table, or Column).

To use the form, follow these steps:

1. In the **System Catalogue** pane, click the required object (Environment, Table, or Column).
2. Click the **Extended Properties** tab.

3. Click **Edit** and set extended properties.
4. Click **Save**.

The extended properties are saved.

You can download extended properties in the XLSX format and use it as a template to [import extended properties](#). To download extended properties, on the **Extended Properties** tab, click **Export To Excel**.

You can also configure extended properties specific to:

- [Systems](#)
- [Environments](#)
- [Tables](#)
- [Columns](#)

Default Connector

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the default connector to import option values from an MS Excel file or enter them manually.

To configure option values using the default connector, follow these steps:

1. In the **Configure Form** section, click the required UI element.

Ensure that you are in edit mode.

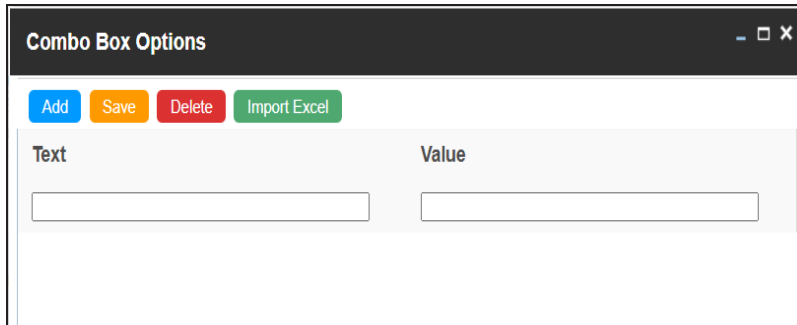

2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the **Connectors** page, ensure that the Default Connector option is selected. Then, click **Next**.

The <UI_Element> Options page appears. For example, if the UI element is Combo Box, the Combo Box Options page appears.

4. Use the following options:

Add

Use this option to enter text and value manually.

Import Excel

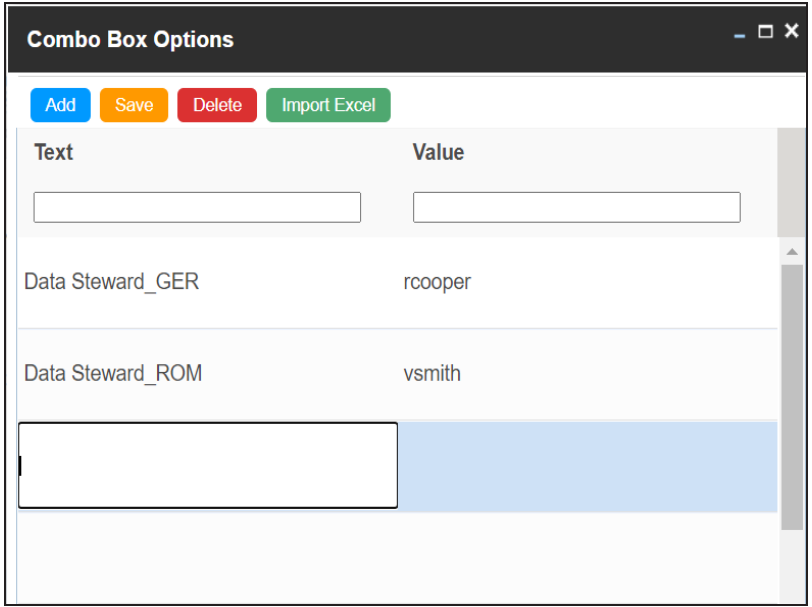

Use this option to import options from MS Excel files.

5. After configuring option values, click **Save**.

To add option values manually, follow these steps:

1. Click **Add**.
2. Enter values to the Text and Value fields.

The Text corresponds to options whereas the Value corresponds to underlying value of an option. You can add as many values as needed.

3. Click **Save**.

The option values appear in the UI element under the Configure Form section.

To import option values from MS Excel files, follow these steps:

1. Click **Import Excel**.

The Upload Excel page appears.

2. Click **Choose File** and select the required MS Excel file.

The Upload Excel page appears. It displays the data in the MS Excel file.

#	GROUP NAME	ROLE NAME	USER ID
#	Select Column To Import	Select Column To Import	Select Column To Import
1	Data Stewards	Data Steward_GER	mmannigan
2	Data Stewards	Data Steward_GER	mmenza
3	Data Stewards	Data Steward_GER	mmannigan

3. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

#	GROUP NAME	ROLE NAME	USER ID
#	Select Column To Import	Select Column To Import	Select Column To Import
1	Data Stewards	Data Steward_GER	mmannigan

4. Select the appropriate option.

Field corresponds to options and Value corresponds to value of an option. You can import multiple columns. Use Clear Selection to undo the selection.

5. Click .

The <UI_Element> Options page appears. It displays the imported columns. You can delete a row that is not required. To delete rows, click a row and then click **Delete**.

6. Click **Save**.

The option values appear in the UI element under the Configure Form section.

Reference Data Manager

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the Reference Data Manager connector to import option values from tables in the Reference Data Manager.

To configure option values using reference data manager connector, follow these steps:

1. In the **Configure Form** section, click the required UI element.

Ensure that you are in edit mode.

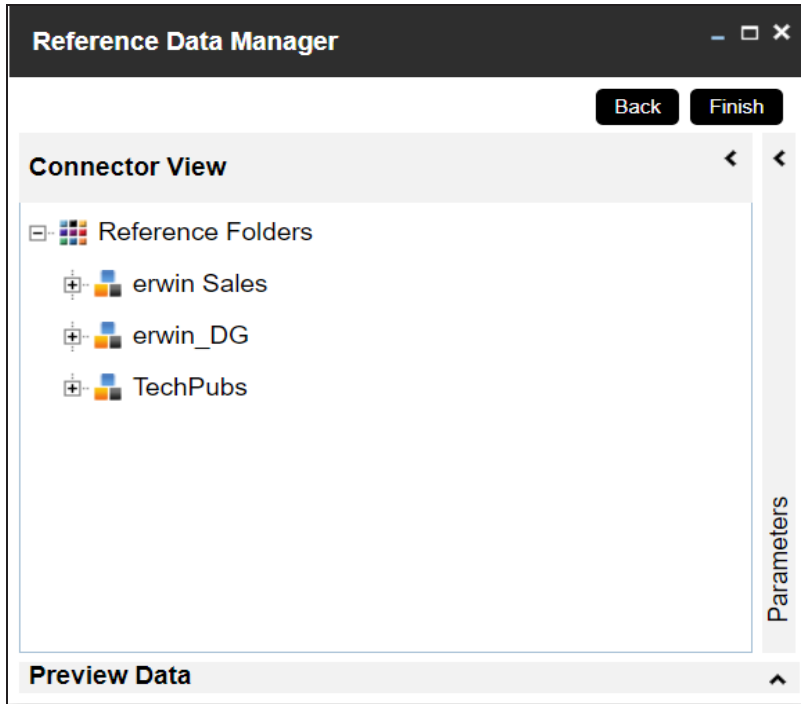

2. In the **Properties** section, click **Configure**.

The Connectors page appears.

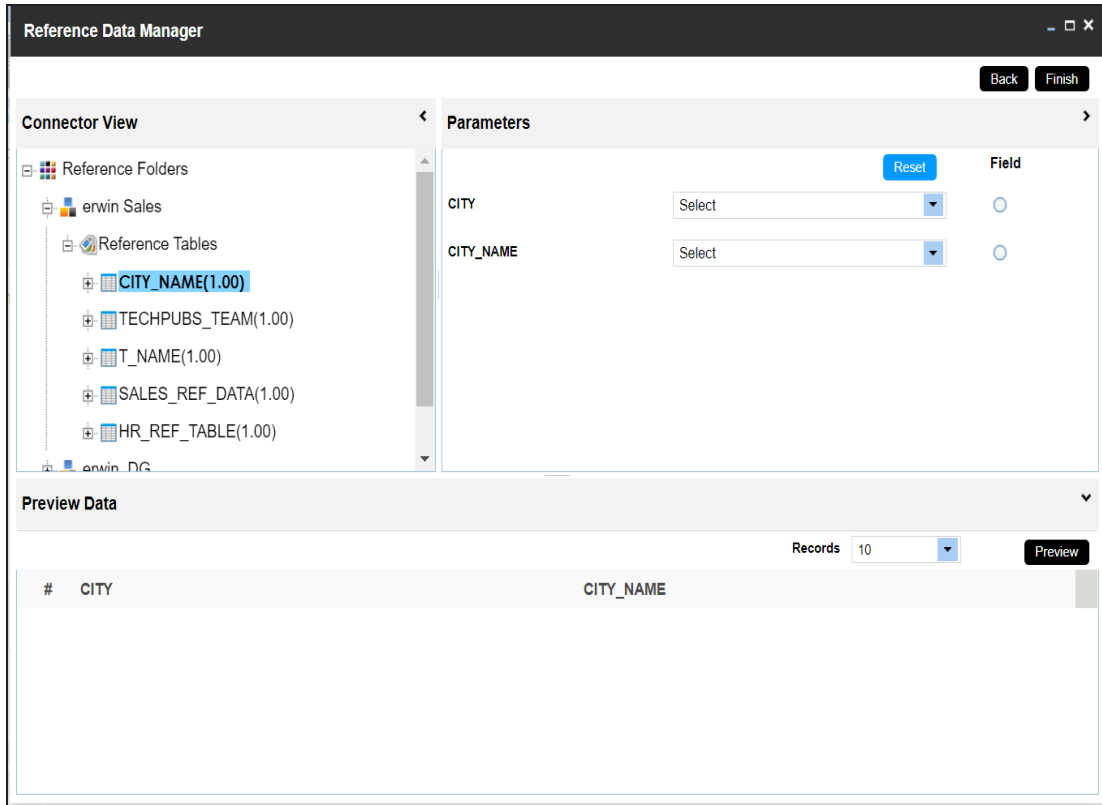

3. On the **Connectors** page, click **Reference Data Manager** and then click **Next**.

The Reference Data Manager page appears. It displays the reference folders in the Connector View pane.

4. In the **Connector View** pane, expand a reference folder and select a reference table. The Parameters pane displays the columns in the reference table. You can also click Preview to view the data in the reference table.

5. In the **Parameters** pane, click the radio button next to the required column.
 You can select the controlling field from the drop down option. Ensure that you define the required dependencies in the Properties pane and that the option values for controlling field are configured using the same reference column.
6. Click **Finish**.
 The Extended Properties Configuration page appears.

7. Under the **Properties** section, switch **Load on Startup** to **ON**.
8. Click **Save**.

The option values are configured. For example, in the following form the List of Cities is the controlling field for Selected City. Both the fields get their option values from the same reference column.

Importing from Excel

You can import user-defined properties for technical assets from an XLSX file. You can either use an existing XLSX file or download an extended properties file from the Extended Properties tab. Ensure that the XLSX file follows the correct template.

To import extended properties from XLSX files, follow these steps:

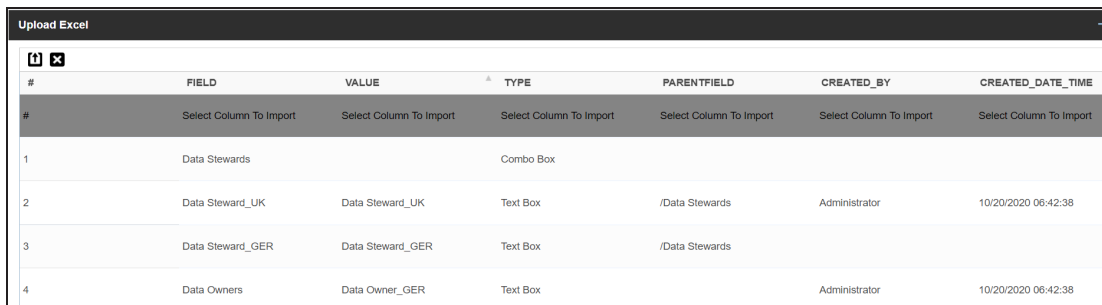

1. On the **Extended Properties** tab, click **Import From Excel**.

The Upload Excel page appears.

2. Click **Choose File**.
3. Browse and select the XLSX file.
4. Click .

The Upload Excel page appears. It displays the data in the XLSX file.

#	FIELD	VALUE	TYPE	PARENTFIELD	CREATED_BY	CREATED_DATE_TIME
#	Select Column To Import	Select Column To Import	Select Column To Import	Select Column To Import	Select Column To Import	Select Column To Import
1	Data Stewards		Combo Box			
2	Data Steward_UK	Data Steward_UK	Text Box	/Data Stewards	Administrator	10/20/2020 06:42:38
3	Data Steward_GER	Data Steward_GER	Text Box	/Data Stewards		
4	Data Owners	Data Owner_GER	Text Box		Administrator	10/20/2020 06:42:38

5. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

Upload Excel

#	FIELD	VALUE	TYPE	PARENTFIELD
#	Select Column To Import	Select Column To Import	Select Column To Import	Select Column To Import
1	VALUE		Combo Box	
2	Data Steward_UK	Data Steward_UK	Text Box	/Data Stewards
3	Data Steward_GER	Data Steward_GER	Text Box	/Data Stewards

6. Select an appropriate option.

For example, if you select Field, then the selected column is imported as Field.

Similarly, you can also select the Value, Type, and Parentfield columns. Ensure that you at least select a Field column.

7. Click .

The extended properties are imported.

System

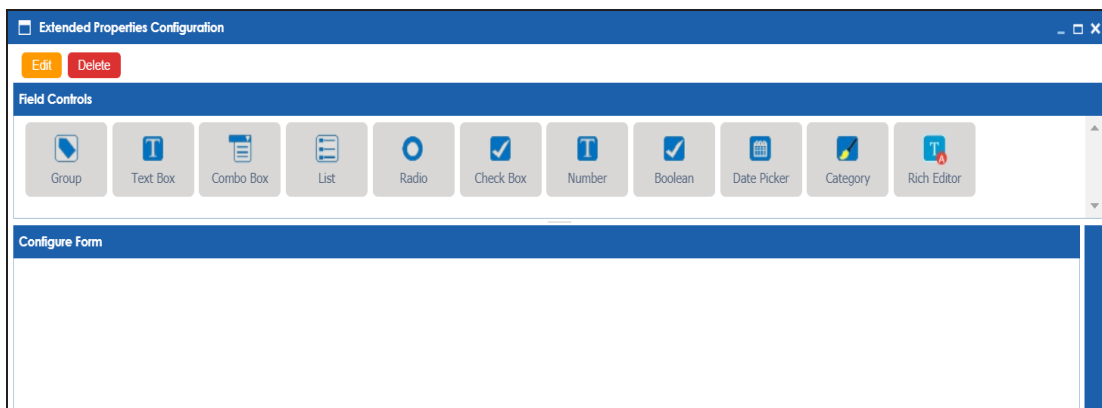

You can configure extended properties specific to a system.

To configure system specific extended properties, follow these steps:

1. In the **System Catalogue** pane, click a system.
2. Click the **Extended Properties** tab.

3. Click **Configure**.

The **Extended Properties Configuration** page contains the following sections:

- **Field Controls:** Use this pane to get the required UI elements.
- **Configure Form:** Use this pane to design forms using the available UI elements in the **Field Controls** pane.
- **Properties:** Use this pane to view the properties of the UI element selected in the **Configure Form** pane.

4. Click **Edit**. Then, double-click or drag and drop the required UI elements from the **Field Controls** pane to the **Configure Form** pane.
5. Select UI elements, one at a time, and configure their properties in the **Properties** pane.
6. Click **Save**.

The form is saved, and is available on the **Extended Properties** tab.

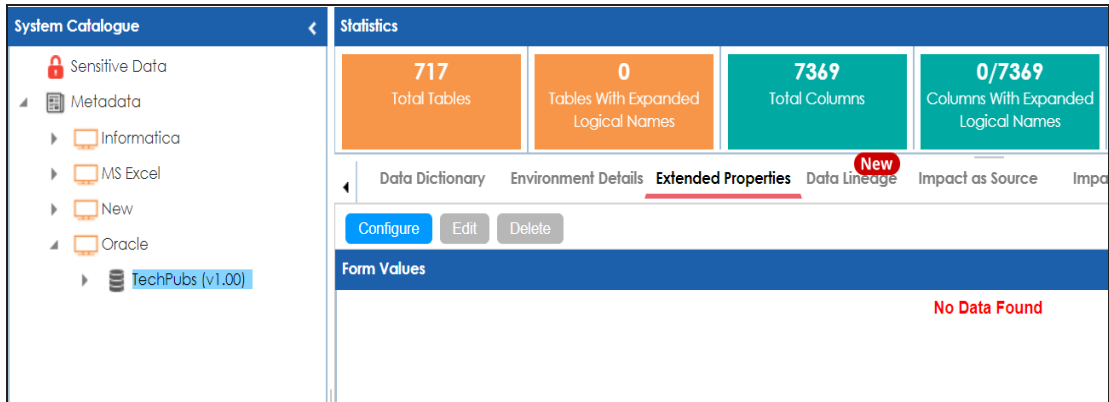

You can download the extended properties in the XLSX format and use it as a template to [import extended properties](#). To download extended properties, on the **Extended Properties** tab, click **Export To Excel**.

Environment

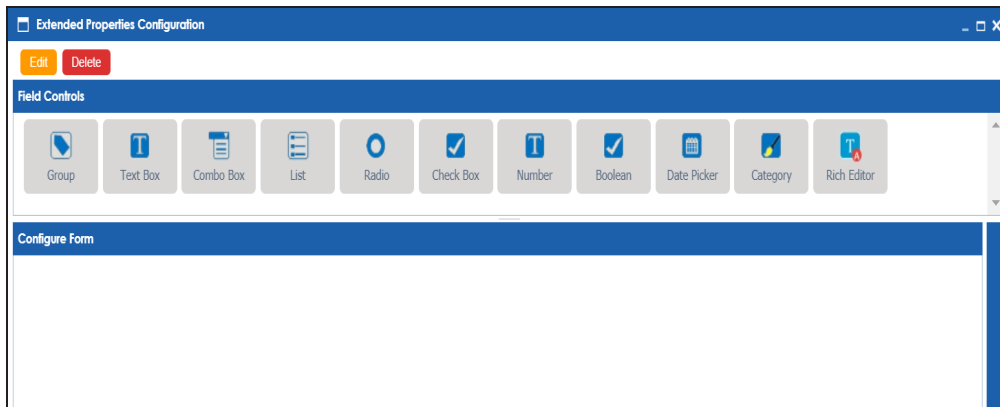

You can configure extended properties specific to an environment.

To configure environment specific extended properties, follow these steps:

1. In the **System Catalogue** pane, click an environment.
2. Click the **Extended Properties** tab.

3. Click **Configure**.

The **Extended Properties Configuration** page contains the following sections:

- **Field Controls:** Use this pane to get the required UI elements.
- **Configure Form:** Use this pane to design forms using the available UI elements in the **Field Controls** pane.

- **Properties:** Use this pane to view the properties of the UI element selected in the **Configure Form** pane.
4. Click **Edit**. Then, double-click or drag and drop the required UI elements from the **Field Controls** pane to the **Configure Form** pane.
 5. Select UI elements, one at a time, and configure their properties in the **Properties** pane.
 6. Click **Save**.

The form is saved, and is available on the **Extended Properties** tab.

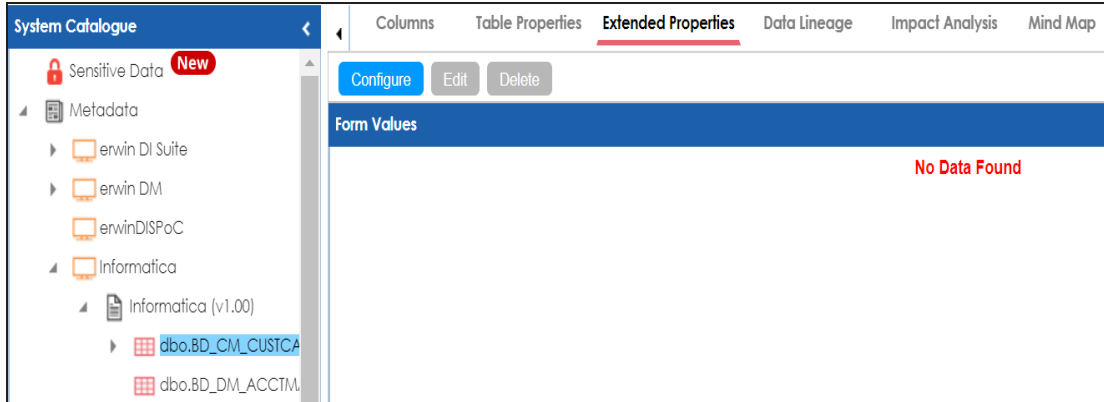

You can download the extended properties in the XLSX format and use it as a template to [import extended properties](#). To download extended properties, on the **Extended Properties** tab, click **Export To Excel**.

Table

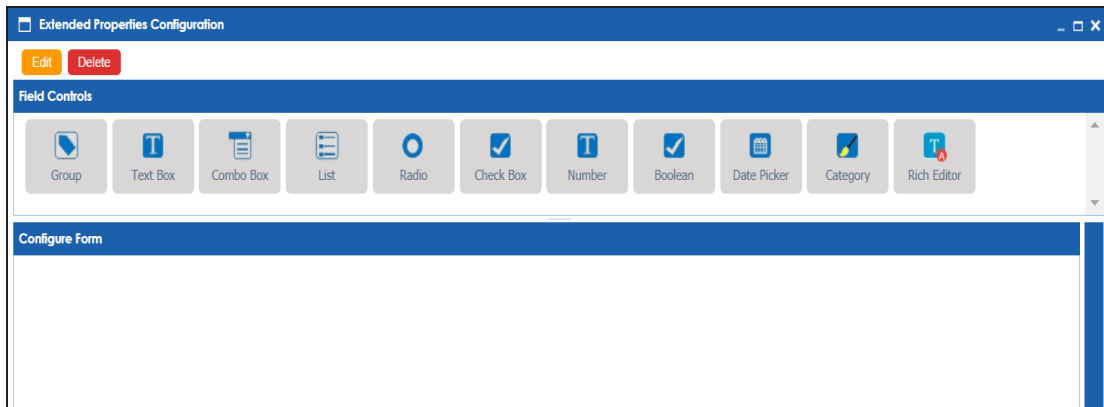

You can configure extended properties specific to a table.

To configure table specific extended properties, follow these steps:

1. In the **System Catalogue** pane, click a table.
2. Click the **Extended Properties** tab.

3. Click **Configure**.

The **Extended Properties Configuration** page contains the following sections:

- **Field Controls:** Use this pane to get the required UI elements.
- **Configure Form:** Use this pane to design forms using the available UI elements in the **Field Controls** pane.

- **Properties:** Use this pane to view the properties of the UI element selected in the **Configure Form** pane.
4. Click **Edit**. Then, double-click or drag and drop the required UI elements from the **Field Controls** pane to the **Configure Form** pane.
 5. Select UI elements, one at a time, and configure their properties in the **Properties** pane.
 6. Click **Save**.

The form is saved, and is available on the **Extended Properties** tab.

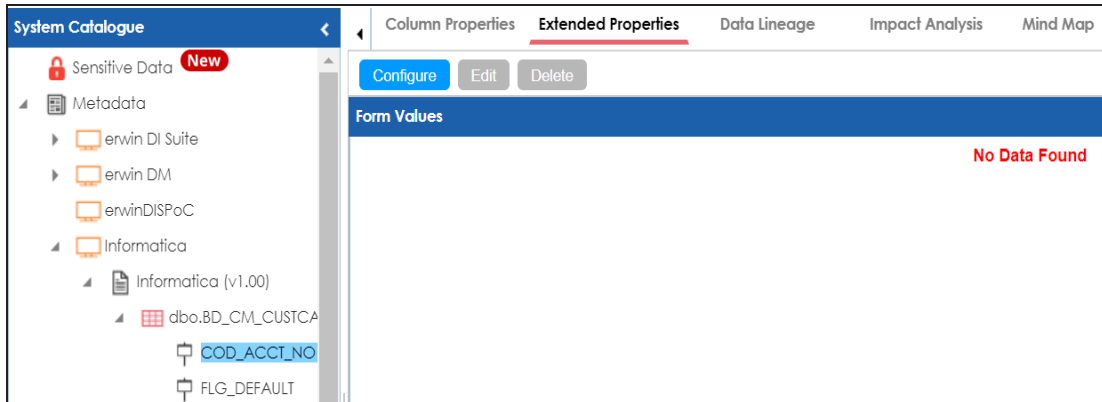

You can download the extended properties in the XLSX format and use it as a template to [import extended properties](#). To download extended properties, on the **Extended Properties** tab, click **Export To Excel**.

Column

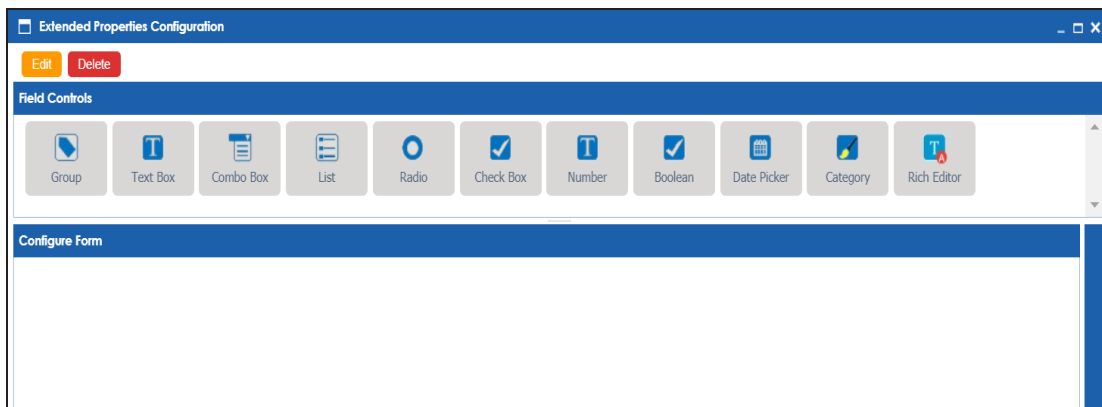

You can configure and use extended properties specific to a column.

To configure column specific extended properties, follow these steps:

1. In the **System Catalogue** pane, click a column.
2. Click the **Extended Properties** tab.

3. Click **Configure**.

The **Extended Properties Configuration** page contains the following sections:

- **Field Controls:** Use this pane to get the required UI elements.
- **Configure Form:** Use this pane to design forms using the available UI elements in the **Field Controls** pane.

- **Properties:** Use this pane to view the properties of the UI element selected in the **Configure Form** pane.
4. Click **Edit**. Then, double-click or drag and drop the required UI elements from the **Field Controls** pane to the **Configure Form** pane.
 5. Select UI elements, one at a time, and configure their properties in the **Properties** pane.
 6. Click **Save**.

The form is saved under the **Extended Properties** tab.

You can download the extended properties in the XLSX format and use it as a template to [import extended properties](#). To download extended properties, on the **Extended Properties** tab, click **Export To Excel**.

Creating and Managing Test Cases for Tables

You can define test cases for a table in the Metadata Manager and determine the testing type, expected and actual results, SQL script, and more. You can also enrich a test case by adding validation steps and supporting documents to it.

The metadata-level test cases are stored in the Test Manager under a project. This project follows the <System_Name>_<Environment_Name> nomenclature format.

Creating and managing test cases involves:

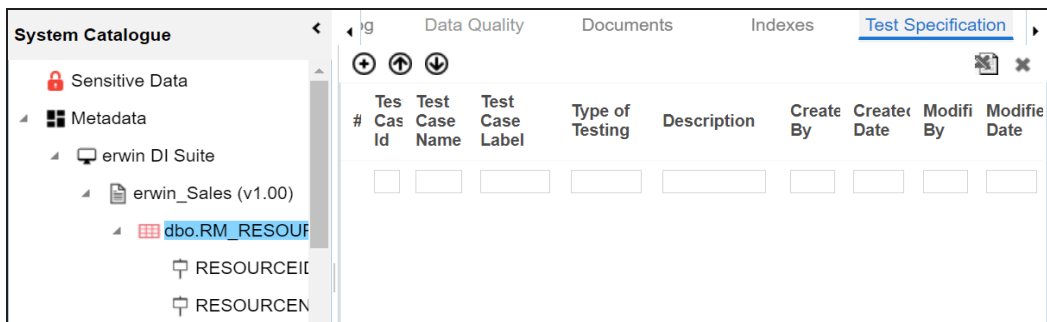

- [Creating test cases](#)
- [Adding validation steps](#)
- [Adding documents](#)
- [Managing test cases](#)

Creating Test Cases

In the Metadata Manager, you can define test cases for tables. You can also add documents and multiple validation steps to the test cases.

To create table-level test cases, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore**.
2. In the **System Catalogue** pane, expand a system, and click a table.
3. Click the **Test Specification** tab.

4. Click .

The Add New Test Case page appears.

Add New Test Case

Test Case Overview | Validation Steps | Document Upload

Save & Continue | Save & Exit | Cancel

Test Case Name*

Test Case Label

Type of Testing

Test SQL Script

Description

Expected Result

5. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Test Case Name	Specifies the name of the test case. For example, Verifying Log in Page.
Test Case Label	Specifies the unique label for the test case. For example, Log in Page.
Type of Testing	Specifies the type of testing. For example, PERFORMANCE-TEST.
Test SQL Script	Specifies the SQL script required in the test execution.

Field Name	Description
	For example, select * from dbo.RM_Resource.
Description	Specifies the test objective in brief. For example: The objective of the test case is to verify log in page with a valid user name and password.
Expected Result	Specifies the expected result of the test case in detail. For example: All the users can log on to erwin DI Suite with their user name and password.
Actual Result	Specifies the actual test result after the execution of the test. For example: One user cannot log on to erwin DI Suite.
Testing Comments	Specifies the testing comments about the test case. For example: The user name and passwords are saved in the dbo.RM_Resource table.

6. Click **Save and Exit**.

The test case is created.

Once the test case is created, you can enrich it further by:

- [Adding validation steps](#)
- [Adding documents](#)

[Managing test cases](#) involves:

- Updating test cases
- Exporting test cases
- Deleting test cases

Adding Validation Steps

In Metadata Manager, you can add multiple validation steps to a table. You can also specify actual and expected results for each validation step.

To add validation steps to table-level test cases, follow these steps:

1. In **System Catalogue**, click a table, and click the **Test Specification** tab.

The Test Case Overview appears in the bottom pane.

The screenshot shows the Metadata Manager interface. On the left is the System Catalogue with a tree view showing a hierarchy of tables under 'Snowflake'. The main pane displays a table of test cases with the following data:

#	Test Case Id	Test Case Name	Test Case Label	Type of Testing	Description	Created By	Created Date	Modified By	Modified Date
1	8	T_Name	Test_Case_Label	Source to Target Testing		Administrator	2021-05-31 08:23: Administrator		2021-05-31 08:23: Administrator

Below the table is a 'Test Case Overview' form with the following fields:

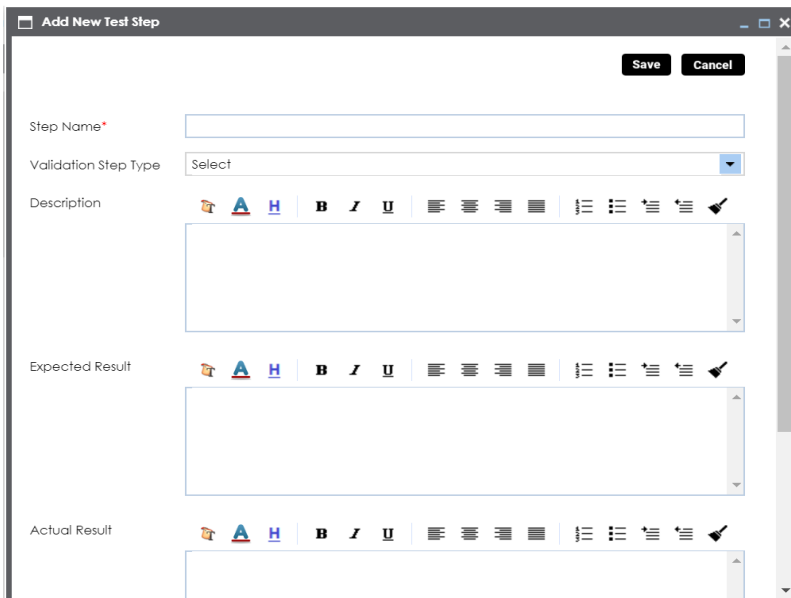

- Test Case Id: 8
- Test Case Name: T_Name
- Test Case Label: Test_Case_Label
- Type of Testing: Source to Target Testing
- Test SQL Script: (empty text area)

2. In the bottom pane, click the **Validation Steps** tab.

3. Click .

The Add New Test Step page appears.

4. Enter appropriate values to the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Validation Step Type	Select the validation step type from the drop-down.
Step Name	Enter an unique name of each step.
Description	Describe the object in brief.
Expected Result	Enter the SQL script to run the test case.
Actual Result	Enter the actual test result after the execution of the test.
Expected Result	Enter the expected result in detail, including the error-message that is displayed on screen.
Test Step Comments	Enter relevant test step comments.

5. Click **Save**.

The validation step is added to the test case.

Adding Documents

You can upload supporting documents such as text files, audio files, videos, and so on to table-level test cases.

To add documents to table-level test cases, follow these steps:

1. In the **System Catalogue** pane, click a table, and click **Test Specification**.

The Test Case Overview appears.

The screenshot shows the Metadata Manager interface. On the left is the System Catalogue pane with a tree view showing a hierarchy of tables. The main area displays a table with columns: #, Test Case Id, Test Case Name, Test Case Label, Type of Testing, Description, Created By, Created Date, Modified By, and Modified Date. A single record is visible with Test Case Id 8, Test Case Name T_Name, Test Case Label Test_Case_Label, and Type of Testing Source to Target Testing. Below the table, there are tabs for Test Case Overview, Validation Steps, and Document Upload. The Test Case Overview tab is active, showing fields for Test Case Id (8), Test Case Name (T_Name), Test Case Label (Test_Case_Label), Type of Testing (Source to Target Testing), and Test SQL Script.

2. In the bottom pane, click **Document Upload**.

The screenshot shows the same interface as the previous one, but the Document Upload tab is now active. It displays a table with columns: #, Document Name, Document Link, Document Status, Intended Use Description, and Options. The table is currently empty.

3. Click .

The Add Test Case Document page appears.

The screenshot shows a web form titled "Add Test Case Document". It contains the following elements:

- Document Name***: A text input field with a red asterisk indicating it is mandatory.
- Document Object**: A large area for uploading files, with the text "Drag-n-Drop files here or click to select files for upload." and a blue upload icon.
- Document Owner**: A text input field.
- Document Link**: A text input field.
- Intended Use Description**: A rich text editor with a toolbar containing icons for text color, background color, bold, italic, underline, bulleted list, numbered list, link, unlink, and insert link.
- Approval Required Flag**: A checkbox.
- Buttons**: "Save" and "Cancel" buttons in the top right corner.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Document Name	Specifies the name of the physical document being attached to the test case. For example, Resource Details.
Document Object	Drag and drop document files or use  to select and upload document files.
Document Owner	Specifies the document owner's name. For example, John Doe.
Document Link	Specifies the URL of the document. For example, https://drive.google.com/file/d/1/2sC2_SZlyeFKI70On-b5YkMBq4ptA7jhg5/view
Intended Use Description	Specifies the intended use of the document. For example: The document has information about the resources of the application.
Approval Required Flag	Specifies whether the document requires approval.

Field Name	Description
	Select the Approval Required Flag check box to select the document status.
Document Status	Specifies the status of the document. For example, In Progress. This field is available only when the Approval Required Flag check box is selected.

5. Click **Save**.

The document is added to the test case.

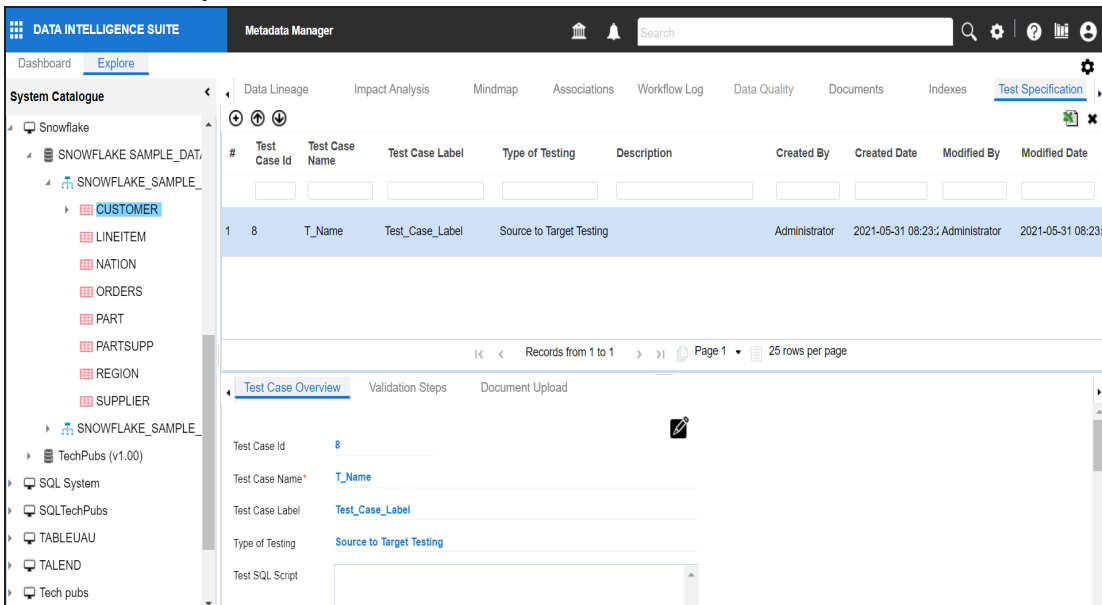

Managing Test Cases

Managing table-level test cases involves:

- Updating test cases
- Exporting test cases
- Deleting test cases

To update table-level test cases, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager**.
2. In the **System Catalogue** pane, click a table.
3. Click the **Test Specification** tab and double-click a test case.

4. In the **Test Case Overview** tab, click .

You can update the test case.

To export a test case, click the test case in the **Test Case Summary** pane, and click .

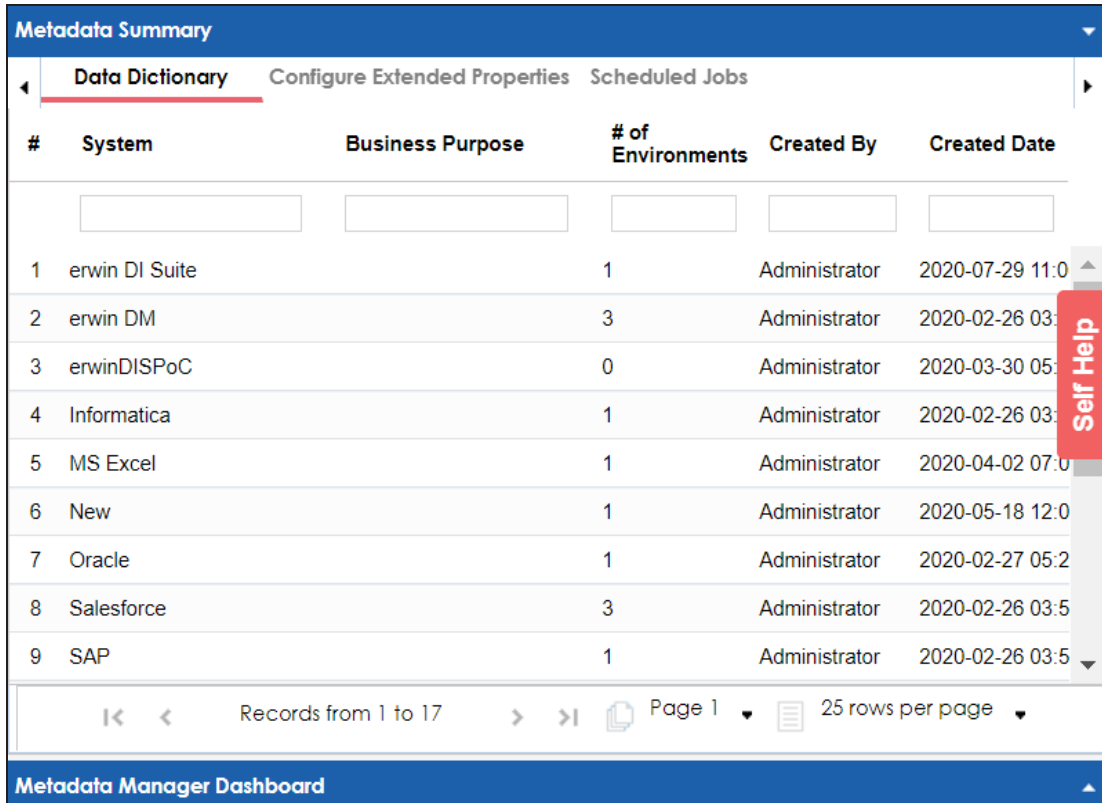

To delete a test case, click the test case in the **Test Case Summary** pane, and click .

Viewing Metadata Manager Dashboard

The Metadata Manager Dashboard displays metrics that help you analyze and track your metadata. It presents this information using charts and graphs.

To access Metadata Manager Dashboard, follow these steps:

1. Go to **Application Menu > Data Catalog > Metadata Manager > Explore.**

The screenshot displays the Metadata Manager Dashboard interface. At the top, there is a 'Metadata Summary' header with a dropdown arrow. Below this, there are three tabs: 'Data Dictionary' (which is selected and underlined in red), 'Configure Extended Properties', and 'Scheduled Jobs'. The main content area is a table with the following columns: '#', 'System', 'Business Purpose', '# of Environments', 'Created By', and 'Created Date'. The table contains 9 rows of data. At the bottom of the table, there is a pagination bar showing 'Records from 1 to 17', 'Page 1', and '25 rows per page'. A red 'Self Help' button is visible on the right side of the table. The footer of the dashboard is labeled 'Metadata Manager Dashboard'.

#	System	Business Purpose	# of Environments	Created By	Created Date
1	erwin DI Suite		1	Administrator	2020-07-29 11:0
2	erwin DM		3	Administrator	2020-02-26 03:5
3	erwinDISPoC		0	Administrator	2020-03-30 05:5
4	Informatica		1	Administrator	2020-02-26 03:5
5	MS Excel		1	Administrator	2020-04-02 07:0
6	New		1	Administrator	2020-05-18 12:0
7	Oracle		1	Administrator	2020-02-27 05:2
8	Salesforce		3	Administrator	2020-02-26 03:5
9	SAP		1	Administrator	2020-02-26 03:5

2. Click the **Metadata Manager Dashboard** pane.

The Metadata Manager Dashboard pane appears.

UI Section	Function
1- System Overview	It displays number of columns in each system.
2- System Usage in Mappings	It displays usage of each system in mappings.
3- System Summary	It displays number of environments, tables, and columns in each system.
4- Sensitive Data Indicators	It displays number of sensitive columns in each system.

System Overview

The System Overview pane displays the number of columns in each system in a pie chart. To open the chart in the Dashboard View, click the pie chart.

Each slice of the pie chart corresponds to a system. You can drill down and view detailed information in the list format.

To view detailed information about a system, click a slice. The Details View tab opens. It includes system name, environment name, table name, and column name.

Dashboard View		Details View		
#	System Name	Environment Name	Table Name	Column Name
	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
1	Oracle	TechPubs	APPQOSSYS.WLM_F STATS1	
2	Oracle	TechPubs	APPQOSSYS.WLM_F FEATURE_INFO	
3	Oracle	TechPubs	APPQOSSYS.WLM_F MEASUREONLY_CUM	
4	Oracle	TechPubs	APPQOSSYS.WLM_F MAXPC	
5	Oracle	TechPubs	APPQOSSYS.WLM_F MEASUREONLY	
6	Oracle	TechPubs	APPQOSSYS.WLM_F MODEBTIME	
7	Oracle	TechPubs	APPQOSSYS.WLM_F TIMESTAMP	
8	Oracle	TechPubs	APPQOSSYS.WLM_F STATS2	
9	Oracle	TechPubs	APPQOSSYS.WLM_F MONITOR	
10	Oracle	TechPubs	APPQOSSYS.WLM_F PREVMODE	
11	Oracle	TechPubs	APPQOSSYS.WLM_F MANAGED	
12	Oracle	TechPubs	APPQOSSYS.WLM_F CURMODE	
13	Oracle	TechPubs	APPQOSSYS.WLM_F MONITOR_CUMTIME	
14	Oracle	TechPubs	APPQOSSYS.WLM_F STATS3	
15	Oracle	TechPubs	APPQOSSYS.WLM_F CURNUMPC	

System Usage in Mappings

The System Usage in Mappings pane displays the number of instances each system is used in mappings in a pie chart. To open the chart in Dashboard View, click the pie chart.

Each slice of the pie chart corresponds to a system. You can drill down and view detailed information in the list format.

To view detailed information about a system, click a slice. The Details View tab opens. It displays system name, project name, map name, and system usage in mappings.

#	System Name	Project Name	Map Name	System Usage In Mappings
1	Oracle	erwinDIS	erwinSalesIntegration(1.01)	7
2	Oracle	erwinDIS	SalesforceIntegration(1.00)	7
3	Oracle	Project	SalesforceIntegration(1.00)	7
4	Oracle	Project Tech Pubs	erwinSalesIntegration(1.01)	7

System Summary

The System Summary pane displays the number of environments, tables, and columns in each system in a bar graph. To open the bar graph in the Dashboard View, click the bar

graph.

Each set of three bars corresponds to a system and represents the number of environments, tables, and columns in the system. You can drill down and view detailed information in the list format.

To view the detailed information, click a bar.

For example, if you click a table bar, then the Tables tab opens.

Dashboard View		Details View				
Environments		Tables		Columns		
#	System Name	Environment Name	Table Name	Table Alias	Table Class	Type
1	Oracle	TechPubs	APPQOSSYS.			TABLE
2	Oracle	TechPubs	APPQOSSYS.			TABLE
3	Oracle	TechPubs	APPQOSSYS.			TABLE
4	Oracle	TechPubs	APPQOSSYS.			TABLE
5	Oracle	TechPubs	APPQOSSYS.			TABLE
6	Oracle	TechPubs	AUDSYS.AUD			TABLE
7	Oracle	TechPubs	DBSFUSER			TABLE
8	Oracle	TechPubs	DBSFUSER			TABLE
9	Oracle	TechPubs	DBSFUSER			TABLE

11	Oracle	TechPubs	DIS10_GA65.#			TABLE
12	Oracle	TechPubs	DIS10_GA65.#			TABLE
13	Oracle	TechPubs	DIS10_GA65.#			TABLE
14	Oracle	TechPubs	DIS10_GA65.#			TABLE

Sensitive Data Indicators

The Sensitive Data Indicators pane displays the number of sensitive columns in each system in a bar graph. To open the bar graph in the Dashboard View, click the bar graph.

Each bar of the bar graph corresponds to a system. You can drill down and view detailed information in the list format.

To view detailed information about sensitive columns in a system, click a bar. The Details View tab opens. It displays system name, environment name, table name, column name, and SDI flag.

Dashboard View		Details View					
#	System Name	System Environment Name	Table Name	Column Name	SDI Flag	Created By	Created Time
1	SQL Syst	Northwind	dbo.Categories	Category	Y	Admin	02/26/2016

8	SQL Syst	SQL Env	dbo.DimE	FirstName	Y	Admin	02/26/2016

Viewing Access Rights and Data Governance Reports

From the Access to Enterprise Access Rights and Data Governance Documentation Reports page, you can view:

- [Access rights](#)
- [Data governance reports](#)

To view access rights and data governance reports, click  from the top navigation pane.

Reports page appears. From the Reports page, you can view [governed assets](#) and [access rights](#). For more information on viewing access rights and data governance reports, follow the below topics.

Data Governance Report

A successful data governance program demands an efficient grouping of roles based on the responsibilities. It is also important to assign appropriate users and roles to catalogs and then assign governance responsibilities to business assets. The governance responsibilities report helps you track assignments of these governance responsibilities to the business assets in the Business Glossary Manager.

To view reports, click the **Governed Assets** tab.

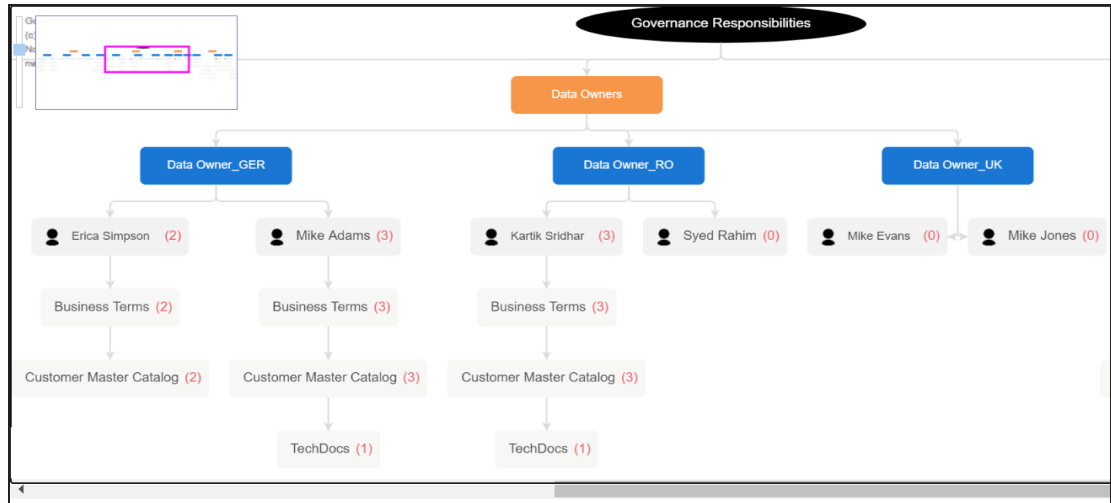

Use the following two views to view reports:

- **Graphical View:**
The graphical view displays the governance responsibilities in a tree structure.
- **Tabular View:**
The tabular view displays the governance responsibilities in a grid format.

By default, the graphical view opens.

To view report details in the graphical view, use the following options:

- **Expand/Collapse** (↕)
Use this option to switch between the expanded or collapsed view. For example, the report displays the governance responsibilities in the expanded view.

- **Pan View**

Use this option to focus on a part of the governance responsibilities tree.

- **Export** (↓)

Use this option to download the report in the JPG format.

The Tabular View displays the governance responsibilities in a grid that includes, roles group, role, user details, asset name, asset type, and catalogs.

Reports ✕

[Governed Assets](#) [Access Rights](#)

BUSINESS ASSETS Graphical View **Tabular View** ↓

Group Name	Role Name	User Id	User Name	User Email	Business Asset	Asset Type	Catalog

Data Owners	Data Owner_GER	madams	Mike Adams	m.adams@xyz.com	TestTaskList	Business Terms	Customer Master Catalog → TechDocs

To download the report in the XLSX format, click .

Access Rights

The Access Rights tab displays the roles and user assignments. You can view these assignments in the graphical and tabular views. The graphical view displays the assigned asset types and names in a tree structure that can be expanded. Whereas the tabular view displays the assigned asset types and names in a grid format.

To view access rights, follow these steps:

1. From the **Reports** page, click the **Access Rights** tab.

2. Use the following options:

By Roles Assignments/By Users Assignments

Use this option to switch between the roles and user's assignments.

Graphical View/Tabular View

Use this option to switch between the graphical and tabular views.

The graphical view displays the assignments in a tree structure. You can expand the tree to view the asset types and names. For example, the following graphical view displays the users assignment.

Use the following options on the Graphical View:

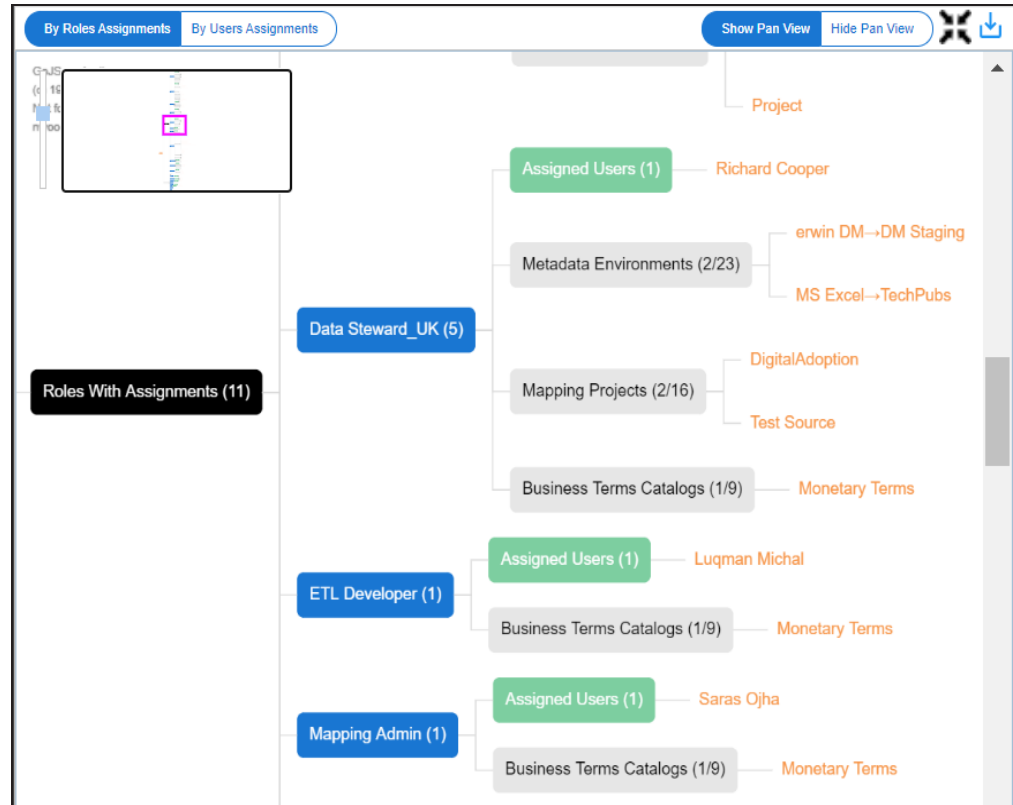

- **Show Pan View/Hide Pan View**

Use this option to show or hide the pan view. The pan view facilitates navigation across the expanded assignment tree. To navigate across the expanded, on the **Pan View**, move the purple box.

- **Expand/Collapse (↕)**

Use this option to switch between the expanded or collapsed view. For example, the following assignment tree appears in the expanded view.

- **Expand Node Level**

Use this option to expand the assignment tree at the node level. Hover over a node and click the plus (+) icon.

- **Export Image** (📄)

Use this option to download the assignment tree in the JPG format.

The Tabular View displays the assignment details in a grid format. For example, the following roles assignments are displayed in the grid format.

Reports ✕
