Understanding your Support

Review support maintenance programs and offerings.

Registering for Support

Access the erwin support site and click Sign in to register for product support.

Accessing Technical Support

For your convenience, erwin provides easy access to "One Stop" support for <u>erwin Data</u> <u>Intelligence (erwin DI)</u>, and includes the following:

- Online and telephone contact information for technical assistance and customer services
- Information about user communities and forums
- Product and documentation downloads
- erwin Support policies and guidelines
- Other helpful resources appropriate for your product

For information about other erwin products, visit http://erwin.com/.

Provide Feedback

If you have comments or questions, or feedback about erwin product documentation, you can send a message to distechpubs@erwin.com.

News and Events

Visit <u>News and Events</u> to get up-to-date news, announcements, and events. View video demos and read up on customer success stories and articles by industry experts.

Mapping Manager

Mapping Manager is the core of erwin Data Intelligence (erwin DI), where you do the following:

- Source to target mappings using the Metadata Tree View
- Associate crosswalks to mappings using the Code Mapping Catalog
- Associate reference data to mappings using the Reference Table Catalog
- Associate requirements to mappings using the Specification Artifact Catalog
- Create new mapping versions
- Specify test cases

Once mappings are approved for coding, ETL developers can export them as coding requirements. They can also export the mappings to XML and automatically generate ETL/ELT jobs for ETL tools, such as Informatica PowerCenter, IBM DataStage, Microsoft SQL Server SSIS, and so on.

To access the Mapping Manager, go to Application Menu > Data Catalog > Mapping Manager. The Mapping Manager dashboard appears:

Mapping Manager

UI Section	Function
1-Workspace Mappings	Use this pane to browse and work on projects and mappings.
12-Central Pane	Use this pane to view or work on the data based on your selection in the browser pane.
3-Mapping Manager Dashboard	Use this pane to view statistics re lated to mappings and projects.
4-Published Mappings	Use this pane to view and export details of published mappings.

Managing mappings involves the following:

- Creating and managing mapping specifications
- **Analyzing mappings**
- **Associating mappings**
- Publishing and creating mapping versions
- **Exporting mapping specifications**
- Creating and managing test cases for mappings
- Viewing mapping manager dashboard

Creating and Managing Mapping Specifications

After defining systems and uploading metadata in the Metadata Manager, you can create mapping specifications. The Mapping Manager offers multiple ways to create mapping specifications. This section walks you through building metadata driven source to target mapping specifications and enterprise standards to manage them.

Creating and managing mapping specifications involves:

- **Creating projects**
- **Defining transformations**
- Creating maps
- Adding transformations and lookup details
- Updating mapping specifications manually
- Uploading mapping specifications in XML format
- Specifying XPath in mapping specifications
- Setting column order and column visibility
- Updating additional mapping information
- Branching and merging maps
- **Deleting maps**
- Viewing workflow logs

Creating Projects

Projects store and group maps in a hierarchy, Projects > Mappings. You can create an ETL tool-specific project and specify its details, such as project description, project manager, business sponsor, cost center, and IT sponsor.

To create projects, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the **Workspace Mappings** pane, right-click the **Projects** node.

3. Click Create Project.

The Create Project page appears.

Creating Projects

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
	Specifies the name of the project.
Project Name	For example, Data Lake Migration.
l roject ivanie	For more information on naming conventions, refer to the
	Best Practices section.
	Specifies the description of the project.
Description	For example: The project contains the mapping spe-
	cifications for the sales data migration.
Project Manager Name	Specifies the project manager's name.
Project Manager Manie	For example, John Doe.
Pusinoss Spansor Namo	Specifies the business sponsor of the project.
Business Sponsor Name	For example, ABC Consulting Services.
Droject ETI	Specifies the ETL tool assigned to the project.
Project ETL	For example, Informatica Pseudocode.
Cost Center	Specifies the cost center of the project.
Cost Center	For example, Finance and Accounting.
IT Chancar Nama	Specifies the IT sponsor of the project.
IT Sponsor Name	For example, XYZ IT Services.

Creating Projects

Field Name	Description
	Specifies whether the transformation is displayed without
Enable display of Trans-	pseudocode.
formation without pseudo-	Switch Enable display of Transformation without pseudo-
code	code on () to display transformation without pseudo-
	code.

5. Click Save and Exit.

A new project is created and added to the project tree.

Once a project is created, you can enrich it further by:

- Adding supporting project documents
- Assigning users to the project
- Configuring extended properties
- **Creating Tasks**
- Creating subject areas
- Creating maps
- Tagging projects

You can also manage a project by using the options available on right-clicking the project. Managing projects involves:

- Uploading legacy maps
- Export mappings
- Export change logs
- Viewing reports
- Sharing links
- **Deleting projects**
- Viewing workflows

Adding Documents

You can add supporting documents, such as text files, audio files, video files, document links, and so on to a project.

To add documents to projects, follow these steps:

- 1. In the Workspace Mappings pane, click a project.
- 2. Click the **Project Documents** tab.

The following page appears.

3. Click

The Add Project Document page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Option	Description
Document Name	Specifies the name of the physical document being attached to the project.
INdiffe	For example, Project Details.
Document	Specifies the name of the reference document.
Reference	For example, Wikipedia pages.
Reference	Specifies the reference number of the reference document.
Number	For example, KB_230145.
Document	Specifies the document owner's name.
Owner	For example, John Doe.
Document Object	Drag and drop or use to browse and select the document.
Decument	Specifies the URL of the document.
Document Link	For example, https://drive.google.com/file/I/2sC2_SZIyeFKI7OOn-b5YkMBq4ptA7jhg5/view
	Specifies the description of the document.
Description	For example: The document is to keep a record of description and data dictionary of the system.
Approval	Specifies whether the document requires approval or not.
Required Flag	Select the Approval Required Flag check box to select the document status.
	Specifies the status of the document.
Document	For example, In Progress.
Status	Select the status of the document from the drop down. This field is available only when the Approval Required Flag check box is selected.

5. Click .

The project document is saved in the Project Documents Grid.

Adding Documents

Once a supporting document is added, use the following options:

Information (10)

Use this option to view the document information.

Download (土)

Use this option to download the document.

Use this option to update the document details.

Delete()

Use this option to delete the document that is not required.

Assigning Users

You can assign one or more members of your team to a project. Team members assigned to a project have write access to all mappings under it. Ensure that the roles assigned to the users have the required permissions.

To assign users, follow these steps:

- 1. In the Workspace Mappings pane, click a project.
- 2. Click the **Project Users** tab.

The Project Users page appears.

3. Click

The Assign Project Users page appears.

4. Select user IDs under User ID list-box and move them to Assigned Users list-box using the arrows (or). Similarly, to change existing user assignment, select user IDs

Assigning Users

under Assigned Users list-box and move them back to User ID list-box using the arrows (or ().

You cannot assign users with Administrator role to projects.

5. Click

The selected users are assigned to the project.

Use the following options to work on the project users list:

Information (10)

Use this option to view project user details, such as telephone number, company, and the assigned responsibility.

Use this option to update project user details, such as assigned role and assigned responsibility.

Delete ()

Use this option to remove a user from the project users list.

Assigning Roles

You can assign one or more roles to a project. Users assigned to these roles get write access to all the mappings in the project. Ensure that the roles have the required permissions to access the Mapping Manager.

To assign roles, follow these steps:

- 1. In the Workspace Mappings pane, click a project.
- 2. Click the **Project Roles** tab.

The Project Roles page appears.

3. Click .

The Assign/Unassign Roles page appears.

Assigning Roles

- 4. Select the required roles.
- 5. Click .

The selected roles are assigned to the project.

You can view the users assigned to roles. To view Role Users, click View.

For example, the following Role Users page displays the users assigned to the Data Owner RO role.

Assigning Roles

Configuring Extended Properties

You can configure user-defined project properties under the Extended Properties tab. First, you need to set up a form and then use it to configure the user-defined extended properties.

To configure extended properties of projects, follow these steps:

- 1. In the Workspace Mappings pane, click a project.
- Click the **Extended Properties** tab.

3. Click Configure.

The Extended Properties Configuration page contains the following sections:

- Field Controls: Use this pane to get the required UI elements.
- Configure Form: Use this pane to design forms using the UI elements available in the Field Controls pane.
- Properties: Use this pane to view the properties of the UI element selected in the Configure Form pane.
- 4. Click Edit. Then, double-click or drag and drop the required UI elements from the Field Controls pane to the Configure Form pane.
- 5. Select UI elements, one at a time, and configure their properties in the **Properties** pane.

The available properties differ based on the type of UI element.

Refer to the following table for property descriptions:

Property	Description
Published	Switch Published to ON to publish the field.
Field	Specifies the field label.

Property	Description
	To change the field labels, double-click the corresponding Value cell.
	For example, Project Approved On.
	Specifies the type of the field.
Туре	To select field types, double-click the corresponding Value cell.
	For example, Date Picker.
Dependencies	Defines the pick list that can be used as controlling fields. It works only with the Reference Data Manager connector.
	To define pick list, select the fields from the drop down option.
	Specifies the connectors for the field.
	To enter option values, click Configure Values .
	Use the following options:
Configure Values	<u>Default connector</u> : Use this option to enter option values manually or using an MS Excel file.
	Reference Data Manager: Use this option to pull option values from reference tables in the Reference Data Manager.
Mandatory	Specifies whether the field is mandatory.
	Specifies the field description.
Description	To enter field descriptions, double-click the corresponding Value cell.
Visible in Exten-	Switch Visible in Extended Properties to ON to make it visible on
ded Properties	the Extended Properties tab.
	Specifies the order of the field on the Extended Properties tab.
Order	To enter the order number, double-click the corresponding Value cell.
	You can also drag and move fields in the Configure Form pane to change their order.

6. Click **Save**.

The form is saved, and is available on the **Extended Properties** tab.

Configuring Extended Properties

You can download extended properties in the XLSX format and use it as a template to import extended properties. To download extended properties, on the Extended Properties tab, click **Export To Excel**.

Default Connector

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the default connector to import option values from an MS Excel file or enter them manually.

To configure option values using the default connector, follow these steps:

- 1. In the **Configure Form** section, click the required UI element. Ensure that you are in edit mode.
- 2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the **Connectors** page, ensure that the Default Connector option is selected. Then, click Next.

The <UI Element> Options page appears. For example, if the UI element is Combo Box, the Combo Box Options page appears.

Default Connector

4. Use the following options:

Add

Use this option to enter text and value manually.

Import Excel

Use this option to import options from MS Excel files.

5. After configuring option values, click Save.

To add option values manually, follow these steps:

- 1. Click Add.
- 2. Enter values in the Text and Value fields.

The Text corresponds to options whereas the Value corresponds to underlying value of an option. You can add as many values as needed.

Default Connector

3. Click Save.

The option values appear in the UI element under the Configure Form section.

To import option values from MS Excel files, follow these steps:

1. Click Import Excel.

The Upload Excel page appears.

2. Click Choose File and select the required MS Excel file.

The Upload Excel page appears. It displays the data in the MS Excel file.

3. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

4. Select the appropriate option.

Field corresponds to options and Value corresponds to value of an option. You can import multiple columns. Use Clear Selection to undo the selection.

5. Click 1.

The <UI_Element> Options page appears. It displays the imported columns. You can delete a row that is not required. To delete rows, click a row and then click **Delete**.

6. Click Save.

The option values appear in the UI element under the Configure Form section.

Reference Data Manager

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the Reference Data Manager connector to import option values from tables in the Reference Data Manager.

To configure option values using reference data manager connector, follow these steps:

- 1. In the **Configure Form** section, click the required UI element. Ensure that you are in edit mode.
- 2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the Connectors page, click Reference Data Manager and then click Next.

The Reference Data Manager page appears. It displays the reference folders in the Connector View pane.

4. In the **Connector View** pane, expand a reference folder and select a reference table.

The Parameters pane displays the columns in the reference table. You can also click Preview to view the data in the reference table.

Reference Data Manager

5. In the **Parameters** pane, click the radio button next to the required column.

You can select the controlling field from the drop down option. Ensure that you define the required dependencies in the Properties pane and that the option values for controlling field are configured using the same reference column.

6. Click Finish.

The Extended Properties Configuration page appears.

Reference Data Manager

- 7. Under the **Properties** section, switch **Load on Startup** to **ON**.
- 8. Click Save.

The option values are configured. For example, in the following form the List of Cities is the controlling field for Selected City. Both the fields get their option values from the same reference column.

Importing from Excel

You can import user-defined project properties from an XLSX file. You can either use an existing XLSX file or download an extended properties file from a project. Ensure that the XLSX file follows the correct template.

To import extended properties from XLSX files, follow these steps:

1. On the Extended Properties tab, click Import From Excel.

The Upload Excel page appears.

- 2. Click Choose File.
- 3. Browse and select the XLSX file.
- 4. Click

The Upload Excel page appears. It displays the data in the XLSX file.

5. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

Importing from Excel

6. Select an appropriate option.

For example, if you select Field, then the selected column is imported as Field.

Similarly, you can also select the Value, Type, and Parentfield columns. Ensure that you at least select a Field column.

7. Click

The extended properties are imported.

Adding Tasks

To improve productivity and collaboration, you can create tasks related to mapping projects. These tasks may be to-do tasks, access requests, or issues. With My Action Center Settings, you can manage task types.

To add tasks, follow these steps:

1. In the Workspace Mappings pane, click a project.

The Mapping Summary page appears.

2. Click the My Action Center tab.

The My Action Center tab opens. It displays a list of all tasks related to the project.

Adding Tasks

3. Click

A list of task types appears. You can add or delete a task type from this list using Action Center Settings.

4. Click the required task type.

The Create New Task page appears.

5. Enter appropriate values in the fields. Refer to the following table for field descriptions.

Field Name	Description
Task is being cre-	Specifies the asset for which the task is created.
ated on Asset	This field autopopulates with the project name.
With Task Type	Specifies the task type.
as	For example, To do Task.
Name	Specifies the name of the task.
	By default, it autopopulates with a name in the fol-

Field Name	Description
	lowing format: Project_ <project_name>. You can</project_name>
	edit it and rename the task.
	For example, Test Mappings.
Description	Specifies a description of a task.
	For example: Test all the mappings and record the
	effort required.
Important	Specifies whether the task is important
Due	Specifies the due date of the task.
	Use to set the due date.
Assign Users	Specifies the users assigned to the task. You can
	assign DI and BU users from the list.
	For example, Richard Cooper.
External user	Specifies the email ID of external users.
emails	For example, chris.harris@quest.com

6. Click .

The task is created and saved. Use
to edit the task details and attach relevant documents.

Chat

Use the Chat tab to send messages to the assigned and external users of a task.

On the **Chat** tab, enter your message in the text box and use the following options:

Assigned

Use this option to send messages to the assigned users.

External Users

Use this option to send messages to external users.

Users are notified via Messaging Center.

Adding Tasks

You can manage a task using the options available on the task list. Managing a task involves:

- Marking tasks complete
- Viewing task details
- Editing task details
- Disabling notifications
- **Downloading Chat**
- Sharing chat
- Marking tasks as pending
- Deleting tasks

With the My Action Center tab, you can filter and search tasks based on its status and assignments. For more information on search and filter mechanisms, refer to the Filter and Search topic.

You can configure task types to categorize tasks. By default, three task types, To-Do Task, Request Access, and Issue, are available. You cannot edit or delete these task types. Additionally, you can create custom task types depending on your requirements.

To add custom task types, follow these steps:

1. In the utility section, click \equiv .

The Task Type Configuration pane appears and displays a list of available task types.

2. In the Add New Task Type box, enter a new task type and then click $\stackrel{+}{-}$.

The task type is added to the list of available tasks.

For example, in the following image, a task type, Schedule Job is added.

Use the following options to manage task types:

Configure Task Type (*)

Use this option to configure task types.

Use this option to edit task types.

Delete ()

Use this option to delete task types.

To configure task types, follow these steps:

1. Click 🌣 .

The Task Type Configuration page appears. By default, the Extended Properties tab opens.

The Extended Properties tab contains the following sections:

- Field Controls: This pane displays the available UI elements.
- Configure Form: Use this pane to design forms using the UI elements available in the Field Controls pane.
- Configure Form: Use this pane to view and edit the properties of the UI element selected in the Configure Form pane.
- 2. Click Edit.
- 3. Double-click or drag and drop the required UI elements from the Field Controls pane to the Configure Form pane.
- 4. Select the required UI element one at a time and edit their properties in the Properties pane.

The available properties differ based on the type of UI element.

Refer to the following table for property descriptions:

Property	Description	
Published	Switch the Published option to ON to publish the field.	
Field	Specifies the field label.	
	To change the field labels, double-click the corresponding Value cell.	
	For example, List.	
Туре	Specifies the type of the field.	
	To select field types, double-click the corresponding Value cell.	
	For example, List.	
Dependencies	Defines the pick list fields that can be used as controlling fields. It	
	works only with the Reference Data Manager connector.	
	To define pick list fields, select the fields from the drop down list.	

Description
Specifies the connectors for the field.
To enter option values, click Configure .
Use the following options:
Default Connector: Use this option to enter option values manually or using an MS Excel file.
Reference Data Manager: Use this option to pull option values
from reference tables in the Reference Data Manager.
Specifies whether the field is mandatory. Switch the Mandatory
option to ON to make this field mandatory in a form.
Specifies the field description.
To enter field descriptions, double-click the corresponding Value cell.
Specifies the order of the field on the Extended Properties tab.
To enter the order number, double-click the corresponding Value cell.
You can also drag and move fields in the Configure Form pane to change their order.

3. Click Save.

The form is saved and available on the Extended Properties tab.

To configure field visibility, follow these steps:

1. Click the **Field Visibility** tab. It displays the default fields available for the task type.

- 2. Click Edit.
- 3. To make fields visible, switch on the required fields.
- 4. Click Save.

The fields are configured.

Default Connector

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the default connector to import option values from an MS Excel file or enter them manually.

To configure option values using the default connector, follow these steps:

1. In the **Configure Form** section, click the required UI element.

Ensure that you are in edit mode.

2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the **Connectors** page, ensure that the Default Connector option is selected. Then, click Next.

The <UI_Element> Options page appears. For example, if the UI element is Combo Box, the Combo Box Options page appears.

4. Use the following options:

Add

Use this option to enter text and value manually.

Import Excel

Use this option to import options from MS Excel files.

5. After configuring option values, click Save.

To add option values manually, follow these steps:

- 1. Click Add.
- 2. Enter values in the Text and Value fields.

The Text corresponds to options whereas the Value corresponds to underlying value of an option. You can add as many values as needed.

3. Click Save.

The option values appear in the UI element under the Configure Form section.

To import option values from MS Excel files, follow these steps:

1. Click Import Excel.

The Upload Excel page appears.

2. Click Choose File and select the required MS Excel file.

The Upload Excel page appears. It displays the data in the MS Excel file.

3. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

4. Select the appropriate option.

Field corresponds to options and Value corresponds to value of an option. You can import multiple columns. Use Clear Selection to undo the selection.

5. Click

The <UI_Element> Options page appears. It displays the imported columns. You can delete a row that is not required. To delete rows, click a row and then click Delete.

6. Click Save.

The option values appear in the UI element under the Configure Form section.

Reference Data Manager

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the Reference Data Manager connector to import option values from tables in the Reference Data Manager.

To configure option values using reference data manager connector, follow these steps:

- 1. In the **Configure Form** section, click the required UI element. Ensure that you are in edit mode.
- 2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the Connectors page, click Reference Data Manager and then click Next.

The Reference Data Manager page appears. It displays the reference folders in the Connector View pane.

4. In the **Connector View** pane, expand a reference folder and select a reference table.

The Parameters pane displays the columns in the reference table. You can also click Preview to view the data in the reference table.

5. In the **Parameters** pane, click the radio button next to the required column.

You can select the controlling field from the drop down option. Ensure that you define the required dependencies in the Properties pane and that the option values for controlling field are configured using the same reference column.

6. Click Finish.

The Extended Properties Configuration page appears.

- 7. Under the **Properties** section, switch **Load on Startup** to **ON**.
- 8. Click Save.

The option values are configured. For example, in the following form the List of Cities is the controlling field for Selected City. Both the fields get their option values from the same reference column.

Managing Tasks

Managing tasks involves:

- Marking tasks complete
- Viewing task details
- Editing task details
- Disabling notifications
- **Downloading Chat**
- Sharing chat
- Marking tasks as pending
- Deleting tasks

To mark tasks complete, on the task list, for the required task, click the radio button.

The task is moved to the list of completed task.

For example, in the following image, the task, Add Business rule is marked complete.

To manage tasks, follow these steps:

1. In the task list, for the required task, click ...

The available options appear.

Managing Tasks

2. Use the following options to work on tasks:

View Task Details

Use this option to view task details. These details include task name, description, assigned assets, attached documents, and so on.

Edit Task Details

Use this option to update task details.

Disable Notification

Use this option to stop receiving notifications related to a task. By default, notifications are enabled, and users assigned to task receive notifications.

Download Chat as Text

Use this option to download chat related to a task in the TXT format.

Send Chat as Email

Use this option to share the chat related to a task via an email. Click Send Chat as Email.

The Email Selection page appears. It displays a list of users assigned to the task.

Select the required users, and then click . An email is sent to the selected users.

Mark as Pending

This option is available for a completed task. Use this option to mark a task as pending.

To delete a task, in the task list, for the required task, click \blacksquare .

You can delete a task only if you have created the task.

Creating Subject Areas

Subject areas provide one more level of grouping for mapping specifications. You can create a subject area within a project or within another subject area. Ensure that the subject area names are unique under each project.

Subject Areas

To create subject areas, follow these steps:

1. In the Workspace Mappings pane, right-click a project.

2. Click New Subject Area.

The Add Subject page appears.

3. Enter the Subject Name and Subject Description.

The Subject Name filed supports # (hash), . (full stop), , (comma), @ (at sign), [] (left and right square brackets), ! (exclamation mark), + (plus), % (percentage), ; (semicolon), = (equals sign), ^ (circumflex accent), and {} (left and right curly brackets) as special characters.

For example:

- Subject Name: Members.
- Subject Description: This subject area is created to arrange the mappings logically.

You can use additional fields and define UI labels in Language Settings.

4. Click

The subject area is saved and added to the project.

Nested Subject Areas

You can create subject areas within another subject area. These subject areas are called nested subject areas.

To create nested subject areas, follow these steps:

1. In the Workspace Mappings pane, right-click a subject area.

2. Click New Subject Area.

The Add Subject page appears.

Creating Subject Areas

3. Enter the Subject Name and Subject Description.

You can use additional fields and define UI labels in Language Settings.

4. Click

A subject area is created under the subject area.

Once a subject area is created, you can enrich it further by Tagging Subjects.

Managing Subject Areas

Managing subject areas involves:

- Deleting
- Reordering

To manage subject areas, follow these steps:

1. In the **Workspace Mappings** pane, right-click a subject area.

2. Use the following options:

Delete Subject Area

Use this option to delete subject areas that are not required.

Reorder Subject Areas

Use this option to reorder subject areas. To reorder subject areas, click Reorder Subject Areas.

The Subject for <Project Name> page appears.

Managing Subject Areas

To order subject areas, from the Order By list, select one of the following options:

- * Ascending Order: Select this option to order in ascending alphabetical order.
- Descending Order: Select this option to order in descending alphabetical
- Custom Order: Select this option to order in custom order.

To sort subject areas, from the **Sort Subjects By** list, select one of the following options:

- **Subject Name**: Select this option to sort by subject name.
- Created By: Select this option to sort by the users who created subject areas.
- Created Date: Select this option to sort by created date.
- Modified By: Select this option to sort by the users who modified subject areas.
- Modified Date: Select this to sort by the modified date.

Managing Projects

Managing projects involves:

- Uploading legacy maps
- Export mappings
- Export change logs
- Viewing reports
- Sharing links
- Deleting projects
- Viewing workflows

To manage projects follow these steps:

1. In the **Workspace Mappings** pane, right-click a project.

The available options appear.

2. Use the following options:

Upload Legacy Maps

Use this option to upload maps in the XLSX format. Ensure that you use the required template.

Export All

Use this option to download the required maps in a project.

Export Change Log

Use this option to download change logs of all the maps in a project.

Reports

Use this option to download various reports related to a project.

Share Link

Use this option to share link of a project with your team members.

Delete Project

Use this option to delete a project.

View Workflow

Use this option to view workflow status of a project.

Defining Transformations

Transformations specify rules that derive values from source columns to get the required values in target columns. You can define enterprise-level and project-level transformations. These transformations can be used as business rules and extended business rule transformations in mapping specifications. Ensure that you define transformations for the same ETL option as that of your mapping project.

To define transformations, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click any one of the following:
 - Transformations node: Click this option to define enterprise-level transformations.
 - Transformations node under a project: Click this option to define project-level transformations.

For example, if you click the Transformations node, then the Transformation Details page appears.

3. Click

The Transformation Rule Editor page appears.

Defining Transformations

4. Enter or select appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Published	Switch Published on () to publish the transformation.
Transformation Name	Specifies a unique name of the transformation.
	For example, ASCII.
Scope	Specifies the projects to which the transformation can be
	applied.
	For example, All Projects.
ETL Option	Specifies the ETL option.
	For example, Informatica Pseudocode.

Defining Transformations

Field Name	Description		
	You can configure ETL option list and add or remove an ETL		
	option from the list.		
Replace Transformation	Switch Replace Transformation Name with Pseudocode on (
Name with Pseudocode	on to replace the transformation name with pseudocode.		
	Specifies the pseudocode for the transformation.		
Pseudocode	Enter a pseudocode or use Ctrl + Space keys to select a pseudocode.		
	For example, To_date(mm/dd/yyyy,1231,9999).		
Intended Use	Specifies the objective of the transformation.		
	For example: Data governance rule - use on projects.		

5. Click .

A new transformation is added on the Transformations Details page.

You can upload transformations in bulk using an MS Excel file.

Once a transformation is defined, you can manage it using the options available on rightclicking the transformation. Managing Transformations involves:

- Editing transformations
- Running impact analysis
- Viewing history

Configuring Transformation Library

You can create transformations for the following ETL options:

- DataStage Pseudocode
- **BODS** Pseudocode
- SSIS Pseudocode
- Informatica Pseudocode
- **ODI Pseudocode**
- Talend Pseudocode

This ETL options list forms the Transformation Library and is configurable. You can add or remove an ETL option from the ETL options list.

To configure transformation library, follow these steps:

1. In the Workspace Mappings pane, click the Transformations node.

The Transformation Details page appears.

2. Click O.

The ETL Settings page appears.

Configuring Transformation Library

3. Switch an **<ETL_Option>** key to **ON** to add the corresponding ETL option to the Transformation Library.

For example, switch BODS Pseudocode to ON to add BODS Pseudocode to the Transformation Library.

4. Click Save.

ETL options are added to the ETL Option list.

Configuring Transformation Library

Uploading Transformations

You can upload transformations in bulk using an MS Excel file. You can either use an existing MS Excel file or a template to upload transformations. Ensure that the MS Excel file follows the correct template.

To upload transformations, follow these steps:

1. In the Workspace Mappings pane, click the Transformations node.

The Transformation Details page appears.

2. Click T

The Upload Transformations page appears.

3. Drag and drop or use it to browse and select the MS Excel file.

You can use a template to upload transformations. For more information on downloading templates, refer to the Downloading Templates section.

4. Click 1.

The file is uploaded, and transformations are added to the Transformation Details page.

Downloading Templates

To download templates, follow these steps:

1. In the Workspace Mappings pane, right-click the Transformations node.

2. Click **Download Template**.

The template is downloaded in the XLSX format. You can update the MS Excel file with the required transformations.

Managing transformations involves:

- Editing transformations
- Deleting transformations
- Running impact analysis
- Viewing history

To manage transformations, follow these steps:

1. In the Workspace Mappings pane, click the Transformations node.

The Transformation Details page appears.

2. Select the required row and right-click it.

The available options appear.

3. Use the following options:

Edit Transformation Details

Use this option to edit transformation details, such as transformation name and its scope.

Delete

Use this option to delete the selected transformation.

If a transformation is already used in a Mapping Specification, it is still visible under it. However, it is not available for future use.

Impact Analysis Report

Hover over Impact Analysis Report and use the following options to view impact analysis of transformations:

Default Search: Use this option to view the impact analysis report of the selected transformation.

Advanced Search: Use this option to select multiple transformations and view their impact analysis report.

For example, the following image displays the impact analysis of a transformation.

History

Use this option to view activity logs of a transformation.

For example, the following image displays the history of a transformation.

• History							
#	Transformation Name	Pseudocode	Intended Use	Created By	Created Date Time	Last Modified By	Last Mod Date
1	FLOOR		ETL Built-In Transformation: Record handling and processing rule for all projects. Returns the largest integer less than or equal to the numeric value you pass to this function. For example, if you pass 3.14 to FLOOR, the function returns 3. If you pass 3.98 to FLOOR, the function terturns 3. Likewise, if you pass -3.17 to FLOOR, the function returns -4.	Administrator	2018-09-14 10:39:48.937	Administrator	2020-16:23
<							

You can create maps under a project or subject area. You can perform source to target mappings and create mapping specifications in maps. These mapping specifications facilitate your data integration project.

To create maps, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the **Workspace Mappings** pane, right-click a project or subject area.

erwin Data Intelligence **Mapping Manager** Workspace Mappings **Project Summary Project Name** Mappings Transformations ■ Projects age Demo ABC (3) **►** New Map batter ((UpLoad XML Source ▶ 🔒 Del (0) Mew BaseLine DigitalA Export All Data Map erwinDI Export Change Log Export Mapping Manager XML ▶ 🛺 ffgg (2) Publish Mappings Иар FlowTes Edit Published Maps Reports ▶ ♣ Hi-Tune tfixTrial 💦 New Subject Area Lineage 1 Reorder Subject Areas ■ Share Link tfixIntegration m Delete Project nroject Execute Connector Project C End To End Lineage 🛺 Tech Ρι R View Workflow

TechPubs

For example, when you right-click a project the available options appear.

3. Click New Map.

▶ ■ TechPubs (6)

The Create a New Mapping page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description		
Mapping Name	Specifies the mapping specification name.		
	For example, EDW_PROD_IDS_Benefits_Detail.		
	This filed supports # (hash), @ (at sign), [] (left and right square brackets), ! (exclamation mark), % (percentage), ; (semicolon), = (equals sign), ^ (circumflex accent), and {} (left and right curly brackets) as special characters.		
	For more information on naming conventions, refer to the <u>Best Practices</u> section.		
Mapping Version	Specifies the version of the mapping specification.		

Field Name	Description
	This field is autopopulated.
	For example, 1.00.
	For more information on configuring version display of maps, refer to
	the Configuring Version Display topic.
Sync	Specifies whether source metadata syncs with the mapping.
Source	Switch Sync Source Metadata to ON to sync source metadata with the
Metadata	mapping.
Sync Target Metadata	Specifies whether target metadata syncs with the mapping.
	Switch Sync Target Metadata to ON to sync target metadata with the
ivictadata	mapping.
Mapping	Specifies the description of the mapping.
Description	For example: This is a map between EDW source and IDS target systems.
	Specifies the mail comments, which can be sent to the project users
	through an email notification.
Mail Com-	For example: Source and target have identical columns, hence they can
ments	be mapped using auto-map technique.
	For more information on configuring notifications, refer to the Con-
	figuring Notifications topic.

5. Click Finish or Proceed with Auto Map.

When you click Finish, a map is created and saved in the mappings tree. You can create a mapping specification under the map using drag and drop method or graphical design.

When you click Proceed with Auto Map, you can create mapping specification using auto-map technique.

Also, You can assign one or multiple tags to maps. For more information on tagging maps, refer to the Tagging Maps topic.

Drag and Drop

You can map source metadata with target metadata and create mapping specifications using the drag and drop method. This method is useful even when source column names are different from target column names. After mapping source to target, you can set a target update strategy for the mappings and enter a description for the strategy.

You can drag and drop tables or columns into the mapping specifications using one of the following:

- Metadata Search View
- Metadata Tree View

Creating Mapping Specifications using Metadata Search View

To create mapping specifications using drag and drop method, follow these steps:

1. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

2. Click .

The Mapping Specification grid switches to edit mode.

You can use the Metadata Search View pane to drag and drop the required source table or column into the Mapping Specification grid. The Metadata Search View pane displays technical assets in a hierarchical manner similar to the Metadata Manager.

Alternatively, click $^{\mathbb{Q}}$ to open **Metadata Search** page. This page enables you to search for tables or columns in the metadata by selecting appropriate values.

Drag and Drop

3. Expand a parent node to view its assets, and select the required asset. For example, open a system node to view relevant environments in it. Then, expand the environment node to view tables and columns respectively.

Additionally, the search bars in the Metadata Search View enables you to search for specific environments, tables, or columns.

Hover over a table or a column and click to open **Metadata Properties** page. This

page displays business, technical, and extended properties of the selected asset.

4. Drag the selected source table or column from the Metadata Search View pane and drop in the Mapping Specification grid.

Ensure that you drop source tables or columns under the respective columns.

You cannot drop source systems or environments in the Mapping Specification grid.

5. Similarly, drag the target table or column from the Metadata Search View pane and drop in the Mapping Specification grid.

Ensure that you drop target tables or columns under the respective columns.

6. Click

The mapping specification is saved.

Creating Mapping Specifications Using Metadata Tree View

To create mapping specifications using drag and drop method, follow these steps:

1. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

2. Click .

You can now edit the Mapping Specification grid.

3. Drag the selected source table or column from the Metadata Tree View pane and drop in the Mapping Specification grid.

Ensure that you drop source tables or columns under the respective columns.

You cannot drop source systems or environments in the Mapping Specification grid.

Drag and Drop

Alternatively, click $^{\mathbb{Q}}$ to use the search function on the Metadata Tree View pane to locate the required asset in the list.

4. Drag the selected target table or column from the Metadata Tree View pane and drop in the Mapping Specification grid.

Ensure that you drop target tables or columns under the respective columns.

You cannot drop target systems or environments in the Mapping Specification grid.

5. Click .

The mapping specification is saved.

Setting Target Update Strategy

To set the target update strategy, follow these steps:

1. Expand the Additional Mapping Information pane and click the Target Update Strategy tab.

This pane is available at bottom of the central pane when you click a map in the Workspace Mappings pane.

2. On the **Target Update Strategy** tab, click **2**.

- 3. Click the required strategy, enter **Update Strategy Description**, and click The target update strategy is set.
- 4. Click .

The source to target mapping is saved.

You can enrich a mapping specification by:

- Adding transformation and lookup details
- Associating code cross walks (code mappings)

Drag and Drop

- Associating reference tables
- Linking requirements

After creating a mapping specification, you can analyze a mapping specification. Analyzing mapping specifications involves:

- Generating virtual preview of target
- Previewing data
- Performing table gap analysis
- Performing column gap analysis
- Running impact analysis
- Running lineage analysis
- Running end to end lineage
- Opening business view
- Viewing mapping statistics

Graphical Designer

You can use the Graphical Designer tab to map source metadata with target metadata and create mapping specifications. This method is useful even when source column names are different from target column names. After mapping source to target, you can set a target update strategy for the mappings and enter a description for the strategy.

You can create mapping specifications in the Graphical Designer tab using one of the following:

- Metadata Search View
- Metadata Tree View

Creating Mapping Specifications using Metadata Search View

To create mapping specifications graphically, follow these steps:

1. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

2. Click the Graphical Designer tab.

The following page appears.

3. Click .

The Graphical Designer tab switches to edit mode.

You can use the Metadata Search View pane to drag and drop the required source table or column into the Graphical Designer. The Metadata Search View pane displays technical assets in a hierarchical manner similar to the Metadata Manager.

Alternatively, click $^{igstyle Q}$ to open ${f Metadata\ Search\ }$ page. This page enables you to search for tables or columns in the metadata by selecting appropriate values.

Graphical Designer

4. Expand a parent node to view its assets, and select the required asset. For example, open a system node to view relevant environments in it. Then, expand the environment node to view tables and columns respectively.

Alternatively, the search bars in the Metadata Search View enables you to search for specific environments, tables, or columns.

Hover over a table or a column and click to open Metadata Properties page. This page displays business, technical, and extended properties of the selected asset.

- 5. Drag the selected source table from the Metadata Search View pane and drop on the Graphical Designer tab.
- 6. On the **Graphical Designer** tab, select the source table and click **▼** next to the Auto Map option. Then, select **As Source** option to specify the table as source.

7. Similarly, drag target table from the Metadata Search View pane and drop on the Graphical Designer tab.

8. On the **Graphical Designer** tab, select the target table and click **▼** next to the Auto Map option. Then, select **As Target** to specify the table as target.

- 9. Use the following options to map source with target:
 - If the source and target have same column names, click **Auto Map**.

The source and target columns are mapped.

If the source and target have different column names, then click and drag your mouse from a source column to the required target column.

The source and target columns are mapped. Repeat the process for the required assets.

10. Click ...

The mapping specification is saved.

Creating Mapping Specifications using Metadata Tree View

To create mapping specifications graphically, follow these steps:

1. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

Graphical Designer

2. Click the **Graphical Designer** tab.

The following page appears.

- 3. Click .
- 4. Drag the selected source table from the Metadata Tree View pane and drop on the Graphical Designer tab.

Alternatively, click \(\frac{Q}{2} \) to use the search function on the Metadata Tree View pane to

locate the required asset in the list.

5. On the **Graphical Designer** tab, select the source table and click **▼** next to the Auto Map option. Then, select **As Source** option to specify the table as source.

6. Drag the selected target table from the Metadata Tree View pane and drop on the Graphical Designer tab.

7. On the **Graphical Designer** tab, select the target table and click **▼** next to the Auto Map option. Then, select **As Target** to specify the table as target.

- 8. Use the following options to map source with target:
 - If the source and target have same column names, click **Auto Map**.

For example, the following image displays the source and target columns are mapped automatically.

If the source and target have different column names, then click and drag your mouse from a source column to the required target column.

For example, the following image displays the source and target columns (blue and red arrows) that are mapped manually.

9. Click .

The mapping specification is saved.

Setting Target Update Strategy

To set the target update strategy, follow these steps:

1. Expand the Additional Mapping Information pane and click the Target Update Strategy tab.

This pane is available at bottom of the central pane when you click a map in the Graphical Designer tab.

2. On the **Target Update Strategy** tab, click **2**.

- 3. Click the required strategy, enter **Update Strategy Description**, and click The target update strategy is set for the mapping specification.
- 4. Click .

The source to target mapping is saved.

You can enrich a mapping specification by:

- Adding transformation and lookup details
- Associating code cross walks (code mappings)
- Associating reference tables
- Linking requirements

After creating a mapping specification, you can analyze a mapping specification. Analyzing mapping specifications involves:

- Generating virtual preview of target
- Previewing data
- Performing table gap analysis
- Performing column gap analysis
- Running impact analysis

Graphical Designer

- Running lineage analysis
- Running end to end lineage
- Opening business view
- Viewing mapping statistics

Starting erwin Data Intelligence (erwin DI) v15.0, you can use the auto-map feature to create mapping specifications even when source and target column names do not match. With this feature, you can view recommended matches for a source column and select the most appropriate target column.

Creating Mapping Specifications

To create mapping specifications using auto-map, follow these steps:

1. In the Workspace Mappings pane, right-click a project or subject area. The available options appear.

2. Click New Map.

The Create New Mapping page appears.

- 3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. For field description, refer to the Creating Maps topic.
- 4. Click Proceed with Auto Map.

The Auto Map Source & Target Objects page appears.

5. Drag the target table from the Metadata pane and drop it in the Target Object(s) box. You can add more than one target tables.

6. Drag source table from the Metadata pane and drop it in the Source Object(s) box.

You can add more than one source tables.

7. Click .

The Auto Mapping Preview Grid displays a list of recommended matches (target columns) for each source column based on maximum matching score. In case the recommended match is not suitable, you can evaluate more recommendations and assign targets manually.

8. Use the following options to manage the auto-map recommendations:

Ranking Threshold

Use this option to set the threshold for match scores. Matches with scores below this threshold do not appear as recommendations. By default, it is set at >= 50%, which means that matches with scores below 50% are not recommended.

Number of Recommendations

Use this option to limit the number of recommendations. By default, it is set to <= 50, which means that number of recommended matches cannot exceed 50.

Maximize (₩)

Use this option to maximize or minimize the Auto Mapping Preview Grid.

Delete Orphan Sources ())

Use this option to delete source attributes that are not mapped.

Delete Orphan Targets ()

Use this option to delete target attributes that are not mapped.

Add Transformations (12)

Use this option to add transformations for the auto map. You can add business rule, extended business rule transformation, look up reference column, lookup on, and trans look up condition.

Add Group

Use this option to add a mapping group to perform other mappings.

Rename Mapping Group (1913)

Use this option to rename a mapping group.

Delete Group

Use this option to delete a mapping group. To delete a mapping group, click the mapping group and then click **Delete Group**.

Create a distinct Mapping for every Group

Use this option to create distinct mapping for every group.

9. Click Finish.

A new map is created and saved under the Mappings tree. All the auto-maps in the multiple mapping groups appear in the same sequence in the Mapping Specification grid.

Assigning Targets Manually

In the Auto Mapping Preview Grid, the Total Recommendations column displays the number of mapping recommendations. To view the recommendations for required rows, click the corresponding number.

The Total Recommendations on page appears. It displays the recommended matches for the source column. By default, a match with the highest score is selected.

For example, the following image displays the recommended matches for a source column, EmployeeID.

You can reject the default match and select another recommended match. To select a match, click the required radio button, and then click Assign As Target.

Setting Target Update Strategy

To specify target update strategy, follow these steps:

- 1. Expand the **Additional Mapping Information** pane. This pane is available at the bottom of the central pane on clicking a map in the Workspace Mappings pane.
- Click the Target Update Strategy tab.

- 3. Click .
- 4. Click the required strategy, enter **Update Strategy Description**, and click

The target update strategy is configured.

Adding Transformations

You can add transformations to an auto-map and specify whether it is applicable to exact match, orphan source, orphan target, or all the rows.

To add transformations in auto-maps, follow these steps:

1. Under the Auto Mapping Preview Grid, click 1.

The Auto Map Transformation page appears.

2. Click •

A row is added to the grid.

3. Double-click the cell under the **Key** column and select the required transformation.

4. Double-click the cell under the **Value** column and select a value.

5. Use the following options:

Exact Match

Use this option to apply the transformation on the exactly matched rows in the Auto Mapping Preview Grid.

Orphan Source

Use this option to apply the transformation on the orphan source rows in the Auto Mapping Preview Grid.

Orphan Target

Use this option to apply the transformation on the orphan target rows in the Auto Mapping Preview Grid.

All

Use this option to apply the transformation on every row in the Auto Mapping Preview Grid.

6. Click

The transformations are added to the auto map.

You can enrich a mapping specification by:

- Adding transformation and lookup details
- Associating code cross walks (code mappings)
- Associating reference tables
- Linking requirements

After creating a mapping specification, you can analyze a mapping specification. Analyzing mapping specifications involves:

- Generating virtual preview of target
- Previewing data
- Performing table gap analysis
- Performing column gap analysis
- Running impact analysis
- Running lineage analysis
- Running end to end lineage
- Opening business view
- Viewing mapping statistics

One to Many and Many to Many Mapping Specifications

You can map multiple source columns to single or multiple target columns to create a mapping specification. After mapping source to target, you can set a target update strategy for the mappings and enter a description for the strategy.

You can create mapping specifications in the Graphical Designer tab using one of the following:

- Metadata Search View
- Metadata Tree View

Creating Mapping Specifications Using Metadata Search View

To create one to many or many to many mapping specifications, follow these steps:

1. In the Workspace Mappings pane, click a map. By default, the Mapping Specification tab opens.

2. Click .

The Mapping Specification grid switches to edit mode.

3. Switch APPEND OFF to ON.

The append mode is enabled. You can now drop multiple columns from the Metadata Search View pane in one row of the Mapping Specification grid.

You can use the Metadata Search View pane to drag and drop the required source table or column in the Mapping Specification grid. The Metadata Search View pane displays technical assets in a hierarchical manner similar to the Metadata Manager.

Alternatively, click $^{\mathbb{Q}}$ to open **Metadata Search** page. This page enables you to search for tables or columns in the metadata by selecting appropriate values.

One to Many and Many to Many Mapping Specifications

4. Expand a parent node to view its assets, and select the required asset. For example, open a system node to view relevant environments in it. Then, expand

- Alternatively, use the search bars in the Metadata Search View to search for specific environments, tables, or columns.
- Hover over a table or a column and click to open **Metadata Properties** page. This page displays business, technical, and extended properties of the selected asset.
- 5. Drag one or multiple source columns from the **Metadata Search View** pane in the Mapping Specification grid under the Source Columns Name column.

You can use the Ctrl key to select multiple columns in the Metadata Search View pane.

- 6. Similarly, drag single or multiple target columns from Metadata Search View in Mapping Specification under the Target Columns Name.
- 7. Click .

The mapping specification is saved.

You can view the mapping specification on the **Graphical Designer** tab to view the graphical representation of the one to many mappings.

Creating Mapping Specifications Using Metadata Tree View

To create one to many or many to many mapping specifications, follow these steps:

1. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

2. Click

3. Switch APPEND OFF to ON.

The append mode is enabled. You can now drop multiple columns from the Metadata Tree View pane in one row of the Mapping Specification grid.

4. Drag one or multiple source columns from the Metadata Tree View pane in the Mapping Specification grid under the Source Columns Name column.

You can use the Ctrl key to select multiple columns in the Metadata Tree View pane.

Alternatively, click \(\frac{\quad \text{to use the search function on the Metadata Tree View pane to } \)

locate the required asset in the list.

- 5. Similarly, drag single or multiple target columns from Metadata Tree View in Mapping Specification under the Target Columns Name.
- 6. Click .

The mapping specification is saved.

You can view the mapping specification on the **Graphical Designer** tab to view the graphical representation of the one to many mappings.

Setting Target Update Strategy

To set target update strategy, follow these steps:

- 1. Expand the Additional Mapping Information pane and click the Target Update Strategy tab.
- 2. On the Target Update Strategy tab, click 2.

3. Click the required strategy, enter **Update Strategy Description**, and click

4. Click .

The source to target mapping is saved.

You can enrich a mapping specification by:

- Adding transformation and lookup details
- Associating code cross walks (code mappings)
- Associating reference tables
- Linking requirements

After creating a mapping specification, you can analyze a mapping specification. Analyzing mapping specifications involves:

- Generating virtual preview of target
- Previewing data
- Performing table gap analysis
- Performing column gap analysis
- Running impact analysis
- Running lineage analysis
- Running end to end lineage
- Opening business view
- Viewing mapping statistics

You can add transformation and lookup details to a mapping specification in the Mapping Specification grid.

Adding transformation details involves setting up:

- Business rule
- Extended business rule transformation

Ensure that you define business rules under the Transformations node for the same ETL Option as the Project ETL. For more information on defining business rules, refer to the Defining Transformations section.

Adding lookup details involves setting up:

- Trans lookup condition
- Lookup reference column
- Lookup on

Ensure that you scan the required table in the Metadata Manager to set trans lookup condition.

Adding Transformation Details

To add business rules to mapping specifications, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

By default, it opens the Mapping Specification tab.

3. Right-click the header menu of the **Mapping Specification** grid.

4. Select the Business Rule check box.

The Business Rule column is now available in the Mapping Specification grid.

5. Click .

You can now edit the Mapping Specification grid.

6. Double-click the cell under the **Business rule** column for the required source column. The available transformations appear.

7. Select a business rule.

You can add business rules for multiple source columns.

8. Click .

The business rules are added to the mapping specification.

To add extended business rule transformations, follow these steps:

1. Right-click the header menu of the **Mapping Specification** grid.

2. Select the Extended Business Rule Transformation check box.

The Extended Business Rule Transformation column is now available in the Mapping Specification grid.

3. Click .

You can now edit the Mapping Specification grid.

4. Click

The available options appear.

- 5. Select the Extended Business Rule check box.
- 6. In the Mapping Specification grid, double-click the cell under the Extended Business rule Transformation column for the required source column.

The Extended Transformation Rule Editor page appears.

7. Select a pseudocode based on the Project ETL.

For example, if the Project ETL is Informatica then select Informatica Pseudocode.

8. Press Ctrl + Space keys.

The available transformations appear.

If the required transformation is not available in the list, use it to create and update the transformations list.

9. Double-click the required transformation.

You can use **IDE** to replace the transformation name with the pseudocode.

10. Click 💾.

The extended business rule transformation is added to the source column. You can add extended business rule transformation to multiple source columns. You can also configure UI labels for user defined fields. For more information on configuring UI labels, refer to the Configuring Language Settings topic.

Adding Lookup Details

To add lookup details in mapping specifications, follow these steps:

- 1. Right-click the header menu of the mapping specification grid.
- 2. Select Lookup Reference Column, Lookup On, and Trans Lookup Condition.

3. Drag the required table from the **Metadata Tree View** pane and drop it under the **Trans Lookup Condition** column for the required source column.

A SQL query populates.

Once trans lookup condition is set for the source column, you can add lookup reference column and lookup on.

To add lookup reference column, double-click the cell under the Lookup Reference **Column** column and select the required option.

To add lookup on, double-click the cell under the Lookup On column and select the required option.

4. Click .

The lookup details are added in the Mapping Specification. You can add lookup details for multiple source columns.

Alternately, you can add transformation and lookup details to a mapping specification graphically. For more information about adding transformation and lookup details graphically, refer to the **Graphical Designer** topic.

Graphical Designer

You can add transformation and lookup details to a mapping specification on the Graphical Designer tab.

Adding transformation details involves setting up:

- Business rule
- Extended business rule transformation

Ensure that you define business rules under the Transformations node for the same ETL Option as the Project ETL. For more information on defining business rules, refer to the Defining Transformations section.

Adding lookup details involves setting up:

- Trans lookup condition
- Lookup reference column
- Lookup on

Ensure that you scan the required table in the Metadata Manager to set trans lookup condition.

Adding Transformation Details

To add business rules graphically, follow these steps:

- 1. Click the Graphical Designer tab.
- 2. Click .

You can now edit the mapping specification graphically.

- 3. Click the mapping link of the required column and expand the **Properties** pane.
- 4. Expand the **Transformation Details** pane.

Graphical Designer

- 5. Double-click the Value cell for Business Rule and select the required value.
- 6. Click .

The business rule is added to the mapping link. You can add business rules for multiple mapping links.

To add extended business rule transformations graphically, follow these steps:

1. On the **Graphical Designer** tab, Click

The available options appear.

2. Select the Extended Business Rule check box.

3. Click the mapping link of the required column and expand the Transformation Details

4. Double-click the Value cell for Extended Business Rule Transformation.

The Extended Transformation Rule Editor page appears.

5. Select the pseudocode based on the Project ETL.

For example, if the Project ETL is Informatica then select Informatica Pseudocode.

Graphical Designer

6. Press Ctrl + Space keys.

The available transformations appear.

If the required transformation is not available in the list, use $\dot{\mathbf{r}}$ to create and update the transformations list.

7. Double-click the required transformation.

You can use **m** to replace transformation name with pseudocode.

8. Click

The extended business rule transformation is added to the mapping link. You can add extended business rule transformations to multiple mapping links.

Adding Lookup Details

To add lookup details graphically, follow these steps:

- 1. On the Graphical Designer tab, click the mapping link of the required column and expand the Properties pane.
- 2. Expand the Lookup Details pane.

3. Drag the required table from the Metadata Tree View pane and drop it for Trans Lookup Condition.

Once trans lookup condition is set, you can add lookup reference column and lookup on.

To add lookup reference column, double-click the cell for Lookup Reference Column and select the required option.

To add lookup on, double-click the cell against Lookup On and select the required option.

4. Click .

The lookup details are added to the mapping specification. You can add lookup details for multiple mapping links.

Updating Mapping Specifications Manually

After creating a mapping specification, you can update the mapping specification manually. However, we recommend that you use the manual method case by case on exception basis.

To update mapping specifications manually, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

By default, it opens the Mapping Specification tab.

3. Click

You can now edit the Mapping Specification grid.

4. Select a row (use Ctrl key to select multiple rows) and right-click the cell.

Updating Mapping Specifications Manually

5. Use the following options:

Check All Rows

Use this option to select the check boxes under the Status column for the selected rows.

Right-click the header menu of the mapping specification grid and select the Status check box, to make Status column visible in the mapping specification grid.

Uncheck All Rows

Use this option to unselect the check boxes under the Status column for the selected rows.

Clear Source Details

Use this option to clear source details in the mapping specification grid.

Clear Target Details

Use this option to clear target details in the mapping specification grid.

Clear Source & Target Details

Use this option to clear source and target details in the mapping specification grid.

Clear Cell

Use this option to clear the cell.

Delete Row(s)

Use this option to delete the selected rows.

Extended Properties

Use this option to configure Extended Properties.

Share Link

Use this option to copy or share the URL of the mapping specification.

To update cell values, double-click a cell and update its values.

Uploading Mapping Specifications in XML

You can upload a mapping specification to a project in the XML format. You can either use an existing XML file or export it from a suitable project. Ensure that the XML file follows the correct template. For more information on exporting a mapping specification in XML, refer to the Proprietary XML Format topic.

To upload mapping specifications in the XML format, follow these steps:

1. Go to Application Menu > Data Catalog > Mapping Manager.

3. Click Upload XML.

The Upload Mapping Manager XML page appears.

4. Drag and drop or use ito browse and select the XML file.

The Upload Mapping Manager XML page appears.

5. Enter Mail Comments and click 1.

The Mapping Specification is uploaded successfully.

If you have enabled notifications, project users receive notification emails and mail comments from the administrator's email ID. For more information on configuring notifications, refer to the **Configuring Notifications** topic.

Specifying XPath in Mapping Specifications

Xpath is a potential path expression in XML documents. Hence, if you have imported source or target metadata from XSD files then it is important to specify Xpath. You can specify Xpath in a mapping specification for source and target columns.

To specify Xpath in mapping specifications, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

By default, it opens the Mapping Specification tab.

3. Right-click the header menu and select the Target XPath and Source XPath check boxes.

Specifying XPath in Mapping Specifications

The Target XPath and Source XPath columns are now visible in the Mapping Specification grid.

- 4. Click .
- 5. Double-click cells under the Target XPath and Source XPath columns to enter the required XPath.
- 6. Click .

The Xpath is specified in the Mapping Specification.

Setting Column Order and Visibility

You can set the column order and visibility in Mapping Specifications and personalize the Mapping Specification grid. This helps you work efficiently.

Column Order

To set the column order in mapping specifications, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

3. Click the required column header, drag and drop the column at the required place.

The Mapping Specifications can be exported with the new column order.

Column Visibility

To set the column visibility, follow these steps:

1. In the **Mapping Specification** grid, click

The Header Menu page appears.

- 2. Expand the respective nodes.
- 3. Select the required columns.

4. Close the **Header Menu** page.

The selected columns are visible in the Mapping Specification grid.

To reset column ordering and visibility click .

Updating Additional Mapping Information

You can update additional mapping information in the Additional Mapping Information pane with respect to the following tabs:

Tab	Description		
	Under this, you can update the following for a mapping specification:		
	* Specification name		
Map Spec	' Version label		
Overview	State name and sub-state name		
	Source and target metadata sync		
	Job Name XRef		
_	Under this, you can update:		
Source Extract SQL	SQL Query relevant to a mapping specification		
300	SQL Query Description		
Target Update	Under this, you can set your target update strategy as per your data integ-		
<u>Strategy</u>	ration requirements.		
Testing Notes	Under this, you can add relevant testing notes with respect to a mapping specification.		
Map Specs Docs	Under this, you can upload relevant documents.		
Assignment	Under this, you can assign a mapping specification to multiple users.		
Specification	Under this, you can link additional specification artifacts relevant to a map-		
<u>Artifacts</u>	ping specification.		
Level of Effort	Under this, you can record planned level of effort and actual level of effort in creating mapping and ETL process.		
Change Log	This tab can be enabled in Mapping Manager Settings. Under this, you can capture change logs of a mapping specification.		
Release Information	Under this, you can view release information of a mapping.		
My Action	Under this, you can collaborate with other users on a task.		

Updating Additional Mapping Information

Tab	Description	
Center		
User Defined	There are five user defined tabs that can be used by you with your own UI	
Tabs (1-5)	<u>labels</u> .	
Extended	Under this, you can extend properties of a mapping specification by creating	
<u>Properties</u>	custom forms.	

To access the Additional Mapping Information pane, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

The central pane displays the Mapping Specification grid. The Additional Mapping Information pane is available at the bottom of the central pane.

3. Click the **Additional Mapping Information** pane.

You can use ◀ or ▶ to navigate across the pane.

Updating Additional Mapping Information

Updating Map Spec Overview

You can update the Map Spec Overview tab and update various aspects of a mapping specification that includes:

- Specification name and its description
- Version label
- Mapping states and sub-states
- Syncing metadata with a mapping specification
- Job name XRef

To update the Map Spec Overview tab, follow these steps:

1. In the Additional Mapping Information pane, on the Map Spec Overview tab, click D

Updating Map Spec Overview

2. Select or enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description	
	Specifies the mapping specification name.	
Specification	For example, EDW_PROD_IDS_Benefits_Detail.	
Name	For more information on naming conventions, refer to the Best	
	<u>Practices</u> section.	
Version Label	Specifies the version label of the mapping specification.	
	For example, EDW_PROD_IDS_Benefits_Detail (Alpha).	
	For more information on configuring version display of maps, refer to	
	the Configuring Version Display topic.	
State Name	Specifies the mapping state of the mapping specification.	

Updating Map Spec Overview

Field Name	Description
	For example, In Progress.
	For more information on configuring mapping states, refer to the Con-
	figuring Mapping State Settings topic.
	Specifies the sub-state of the mapping specification.
Sub State	For example, Needs Approval.
Name	For more information on configuring mapping sub-states, refer to the
	Configuring Mapping State Settings topic.
Sync Source	Switch Sync Source Metadata to ON to sync source metadata with the
Metadata	mapping specification.
Sync Target	Switch Sync Target Metadata to ON to sync target metadata with the
Metadata	mapping specification.
Job Name	Specifies the equivalent ETL mapping name.
XRef	For example, ErwinDIS931.
	Specifies the description for the mapping specification.
Description	For example: This is a map between EDW source and IDS target sys-
	tems.

You cannot edit Map Id, Workflow Status, and Map Specification Ver-

For more information on workflow status, refer to the Managing Mapping Manager Workflows topic.

3. Click

The fields on the Map Spec Overview tab are updated.

Updating Source Extract SQL

You can keep a record of multiple source extract SQL and its description. You can also update it as per your requirements.

To update source extract SQL, follow these steps:

1. In the Additional Mapping Information pane, click the Source Extract SQL tab.

The Source Extract SQL tab appears.

2. click .

Updating Source Extract SQL

3. Enter SQL Query and SQL Query Description.

For example:

- SQL Query: Select * from dbo.RM_Resource
- SQL Query Description: The query extracts the data from dbo.RM_Resource table.
- 4. Click

The Source Extract SQL is updated.

Setting Target Update Strategy

You can set the way target metadata is updated when you map source to target. You can update the strategy any time as per your requirement.

To set target update strategy, follow these steps:

1. In the Additional Mapping Information pane, click the Target Update Strategy tab.

2. Click

3. Click the appropriate update strategy from the options and enter **Update Strategy** Description.

For example:

- Update strategy: Insert else Update
- * Update Strategy Description: Insert the source column value to a blank target column else update the target column value with the source column value.
- 4. Click

The Target Update Strategy is set.

Updating Testing Notes

You can keep a record of testing notes related to a mapping specification and specify test results as:

- Un-specified
- Pass
- Fail
- Needs analysis

To update testing notes, follow these steps:

1. In the Additional Mapping Information pane, click the Testing Notes tab.

2. Click

3. Click the appropriate option for test results and enter **Testing Notes**.

For example:

- Test results: Pass
- **Testing Notes**: The mapping specification passed the testing and it is ready for the ETL process.
- 4. Click

The Testing Notes are updated.

Adding Mapping Specification Documents

You can add supporting documents, such as text files, audio files, video files, document links, and so on to a mapping specification.

To upload mapping specification documents, follow these steps:

1. In the Additional Mapping Information pane, click the Map Spec Docs tab.

2. Click

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Adding Mapping Specification Documents

Field Name	Description
Document Name	Specifies the name of the physical document being attached to the mapping specification. For example, Mapping Details.
Document Object	Drag and drop document files or use $\stackrel{\triangle}{=}$ to select and upload document files.
Document	Specifies the document owner's name.
Owner	For example, John Doe.
Document	Specifies the URL of the document.
Link	For example, https://drive.google.com/file/I/2sC2_SZIyeFKI7OOn-
LITIK	b5YkMBq4ptA7jhg5/view
Description	Specifies the description of the document.
Description	For example: The document has information about the mapping details.
Approval	Specifies whether the document requires approval.
Required	Select the Approval Required Flag check box to select the document
Flag	status.
	Specifies the status of the document.
Document	For example, In Progress.
Status	Select the status of the document from the drop down. This field is avail-
	able only when the Approval Required Flag check box is selected.

4. Click

The mapping specification document is added.

Assigning Mapping Specifications to Users

You can assign a mapping specification to your team members in the following capacities:

- Mapping Designer
- Mapping Approver
- Mapping ETL Developer
- **Mapping Tester**

By default, the user that creates the mapping specification is the Mapping Designer. You can re-assign another user as the Mapping Designer.

To assign mapping specifications to users, follow these steps:

1. In the Additional Mapping Information pane, click the Assignment tab.

2. Click .

Assigning Mapping Specifications to Users

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description		
Mapping	Specifies the User Full Name and User ID of the Mapping Designer.		
Designer	For example, Jane Doe(janedoe).		
Mapping	Specifies the User Full Name and User ID of the Mapping Approver.		
Approver	For example, John Doe(jdoe).		
	Specifies the User Full Name and User ID of the Mapping ETL		
Mapping ETL Developer	Developer.		
Developel	For example, John Denver(jdenver).		
Manning Tostor	Specifies the User Full Name and User ID of the Mapping Tester.		
Mapping Tester	For example, Michael Samuel(M.Samuel).		
Status	Specifies the status of the user's task.		
	For example, Pending Review.		
Email	The Email check boxes populate as you select corresponding users.		

Assigning Mapping Specifications to Users

Field Name	Description		
	Select the check boxes to send email notifications to the cor-		
	responding users about the mapping assignment and change in map-		
	ping status.		
	For more information on configuring email notifications, refer to the		
	Configuring Notifications topic.		
Distribution/CC List	Enter a comma-separated list of email IDs that should receive the		
	email notification about the assignment.		
	For example, ab.dav@xyz.com, cal.kai@xyz.com		
	The email notification is sent from the <u>administrator's email ID</u> .		
	Specifies custom notes about the mapping assignment.		
Custom Notes	For example: John Denver is the Mapping ETL Developer of the map-		
	ping specification.		
	Specifies the changes in the mapping assignment. The information in		
Assignment Changes	this field is system-generated.		
	For example: User Administrator - Default System User(Admin-		
	istrator) has been assigned to the mapping on 2020-01-12		
	19:58:15.815.		

4. Click

The mapping specification is assigned to the users.

Linking Additional Specification Artifacts

The Requirements Manager captures functional requirements of a data integration project using Specification Artifacts. You can link these specification artifacts with mapping specifications.

To link specification artifacts with mapping specifications, follow these steps:

1. In the **Additional Information** pane, click the **Specification Artifacts** tab.

2. Click .

3. In the right pane, expand the **Specification Artifact Catalog** pane and drag and drop the required specification under the Specification Artifacts tab.

4. Click

The specification artifact is linked.

Recording Level of Effort

You can record and compare planned level of effort with the actual level effort spent on creating and managing mapping specifications.

To record the level of effort, follow these steps:

1. In the Additional Mapping Information pane, click the Level of Effort tab.

2. Click

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Sub- Fields	Description
Planned Level of Effort		Specifies the planned mapping effort in days. For example, 10.5 days.
	ETL Effort	Specifies the planned ETL effort in days.

Recording Level of Effort

Field Name	Sub- Fields	Description
		For example, 10.5 days.
	Notes	Specifies notes about the planned level of effort.
		For example: Planned level of effort took all the project
		requirements into account.
	Mapping	Specifies the actual mapping effort in days.
	Effort	For example, 9.5 days.
A studies and of		Enter the actual ETL effort in days.
Actual Level of Effort		For example, 9.5 days.
	Notes	Specifies the notes about the actual level.
		For example: Actual level of effort were lesser than the
		planned level of effort.

4. Click

The level of effort tab is recorded.

Viewing Change Logs

A change log is a record of changes made in a Mapping Specification grid. You can view these changes on the Change Log tab. By default, this tab is disabled. You can enable it under Change Log Settings. For more information, refer to the Configuring Change Log Settings topic.

To view the change logs of the mapping specifications, in the Additional Information pane, click the Change Log tab.

Viewing Release Information

The release, migration, and audit-related information of a mapping specification are available on the Release Information tab. For more information on releases, refer to the Release Manager section.

To view release information of mapping specifications, in the Additional Mapping Information pane, click the Release Information tab.

The release information of the mapping specification appears.

Adding Tasks

To collaborate on mappings you can create tasks depending on your requirement. By default, you can create to-do tasks, access requests, or issues. Apart from these task types, you can configure custom task types via Task Type Configuration.

To add tasks, follow these steps:

1. In the Additional Mapping Information pane, click the My Action Center tab. The My Action Center tab opens. It displays a list of all tasks related to the map.

2. Click .

A list of task types appears.

3. Click the required task type.

The Create New Task page appears.

4. Enter appropriate values in the fields. Refer to the following table for field descriptions.

Field Name	Description
Task is being cre-	Specifies the asset for which the task is created.
ated on Asset	This field autopopulates with the map name.
With Task Type	Specifies the task type.
as	For example, To do Task.
Name	Specifies the name of the task.
	By default, it autopopulates with a name in the fol-

Field Name	Description
	lowing format: Mapping_ <map_name>. You can</map_name>
	edit it and rename the task.
	For example, Test Mappings.
	Specifies a description of a task.
Description	For example: Test all the mappings and record the
	effort required.
Important	Specifies whether the task is important
	Specifies the due date of the task.
Due	Use to set the due date.
	Specifies the users assigned to the task. You can
Assign Users	assign DI and BU users from the list.
	For example, Richard Cooper.
External user	Specifies the email ID of external users.
emails	For example, chris.harris@quest.com

5. Click .

The task is created and saved. Use
to edit the task details and attach relevant documents.

Chat

Use the Chat tab to send messages to the assigned and external users of a task.

On the **Chat** tab, enter your message in the text box and use the following options:

Assigned

Use this option to send messages to the assigned users.

External Users

Use this option to send messages to external users.

Users are notified via Messaging Center.

Adding Tasks

You can manage a task using the options available on the task list. Managing a task involves:

- Marking tasks complete
- Viewing task details
- Editing task details
- Disabling notifications
- **Downloading Chat**
- Sharing chat
- Marking tasks as pending
- Deleting tasks

With the My Action Center tab, you can filter and search tasks based on its status and assignments. For more information on search and filter mechanisms, refer to the Filter and Search topic.

With My Action Center, you can configure task types to collaborate on miscellaneous tasks. By default, three task types, To-Do Task, Request Access, and Issue are available. These task types cannot be edited or deleted.

To add custom task types, follow these steps:

1. In the utility section, click .

The Task Type Configuration pane appears and displays a list of available task types.

2. In the Add New Task Type box, enter a new task type and then click $\stackrel{+}{-}$.

The task type is added to the list of available tasks.

For example, in the following image, a task type, Schedule Job is added.

Use the following options to manage task types:

Configure Task Type (*)

Use this option to configure task types.

Use this option to edit task types.

Delete ()

Use this option to delete task types.

To configure task types, follow these steps:

1. Click 🌣 .

The Task Type Configuration page appears. By default, the Extended Properties tab opens.

The Extended Properties tab contains the following sections:

- Field Controls: This pane displays the available UI elements.
- Configure Form: Use this pane to design forms using the UI elements available in the Field Controls pane.
- Configure Form: Use this pane to view and edit the properties of the UI element selected in the Configure Form pane.
- 2. Click Edit.
- 3. Double-click or drag and drop the required UI elements from the Field Controls pane to the Configure Form pane.
- 4. Select the required UI element one at a time and edit their properties in the Properties pane.

The available properties differ based on the type of UI element.

Refer to the following table for property descriptions:

Property	Description
Published	Switch the Published option to ON to publish the field.
Field	Specifies the field label.
	To change the field labels, double-click the corresponding Value cell.
	For example, List.
Туре	Specifies the type of the field.
	To select field types, double-click the corresponding Value cell.
	For example, List.
Dependencies	Defines the pick list fields that can be used as controlling fields. It
	works only with the Reference Data Manager connector.
	To define pick list fields, select the fields from the drop down list.

Property	Description
	Specifies the connectors for the field.
	To enter option values, click Configure .
Configure Val	Use the following options:
Configure Values	Default Connector: Use this option to enter option values manually or using an MS Excel file.
	Reference Data Manager: Use this option to pull option values from reference tables in the Reference Data Manager.
Mandatory	Specifies whether the field is mandatory. Switch the Mandatory option to ON to make this field mandatory in a form.
Description	Specifies the field description.
	To enter field descriptions, double-click the corresponding Value cell.
Order	Specifies the order of the field on the Extended Properties tab.
	To enter the order number, double-click the corresponding Value cell.
	You can also drag and move fields in the Configure Form pane to change their order.

3. Click Save.

The form is saved and available on the Extended Properties tab.

To configure field visibility, follow these steps:

1. Click the **Field Visibility** tab. It displays the default fields available for the task type.

- 2. Click Edit.
- 3. To make fields visible, switch on the required fields.
- 4. Click Save.

The fields are configured.

Default Connector

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the default connector to import option values from an MS Excel file or enter them manually.

To configure option values using the default connector, follow these steps:

1. In the **Configure Form** section, click the required UI element.

Ensure that you are in edit mode.

2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the **Connectors** page, ensure that the Default Connector option is selected. Then, click Next.

The <UI_Element> Options page appears. For example, if the UI element is Combo Box, the Combo Box Options page appears.

4. Use the following options:

Add

Use this option to enter text and value manually.

Import Excel

Use this option to import options from MS Excel files.

5. After configuring option values, click Save.

To add option values manually, follow these steps:

- 1. Click Add.
- 2. Enter values in the Text and Value fields.

The Text corresponds to options whereas the Value corresponds to underlying value of an option. You can add as many values as needed.

3. Click Save.

The option values appear in the UI element under the Configure Form section.

To import option values from MS Excel files, follow these steps:

1. Click Import Excel.

The Upload Excel page appears.

2. Click Choose File and select the required MS Excel file.

The Upload Excel page appears. It displays the data in the MS Excel file.

3. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

4. Select the appropriate option.

Field corresponds to options and Value corresponds to value of an option. You can import multiple columns. Use Clear Selection to undo the selection.

5. Click

The <UI_Element> Options page appears. It displays the imported columns. You can delete a row that is not required. To delete rows, click a row and then click Delete.

6. Click Save.

The option values appear in the UI element under the Configure Form section.

Reference Data Manager

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the Reference Data Manager connector to import option values from tables in the Reference Data Manager.

To configure option values using reference data manager connector, follow these steps:

- 1. In the **Configure Form** section, click the required UI element. Ensure that you are in edit mode.
- 2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the Connectors page, click Reference Data Manager and then click Next.

The Reference Data Manager page appears. It displays the reference folders in the Connector View pane.

4. In the **Connector View** pane, expand a reference folder and select a reference table.

The Parameters pane displays the columns in the reference table. You can also click Preview to view the data in the reference table.

5. In the **Parameters** pane, click the radio button next to the required column.

You can select the controlling field from the drop down option. Ensure that you define the required dependencies in the Properties pane and that the option values for controlling field are configured using the same reference column.

6. Click Finish.

The Extended Properties Configuration page appears.

- 7. Under the **Properties** section, switch **Load on Startup** to **ON**.
- 8. Click Save.

The option values are configured. For example, in the following form the List of Cities is the controlling field for Selected City. Both the fields get their option values from the same reference column.

Managing Tasks

Managing tasks involves:

- Marking tasks complete
- Viewing task details
- Editing task details
- Disabling notifications
- **Downloading Chat**
- Sharing chat
- Marking tasks as pending
- Deleting tasks

To mark tasks complete, on the task list, for the required task, click the radio button.

The task is moved to the list of completed task.

For example, in the following image, the task, Add Business rule is marked complete.

To manage tasks, follow these steps:

1. In the task list, for the required task, click .

The available options appear.

Managing Tasks

2. Use the following options to work on tasks:

View Task Details

Use this option to view task details. These details include task name, description, assigned assets, attached documents, and so on.

Edit Task Details

Use this option to update task details.

Disable Notification

Use this option to stop receiving notifications related to a task. By default, notifications are enabled, and users assigned to task receive notifications.

Download Chat as Text

Use this option to download chat related to a task in the TXT format.

Send Chat as Email

Use this option to share the chat related to a task via an email. Click Send Chat as Email.

The Email Selection page appears. It displays a list of users assigned to the task.

Managing Tasks

Select the required users, and then click . An email is sent to the selected users.

Mark as Pending

This option is available for a completed task. Use this option to mark a task as pending.

To delete a task, in the task list, for the required task, click \blacksquare .

You can delete a task only if you have created the task.

Configuring Extended Properties

You can configure user-defined properties of a mapping specification under the Extended Properties tab.

First, you need to set up a form and then use it to configure the user-defined extended properties.

To configure extended properties of mapping specifications, follow these steps:

1. In the Additional Mapping Information pane, click the Extended Properties tab.

2. Click Configure.

The Extended Properties Configuration page contains the following sections:

- Field Controls: Use this pane to get the required UI elements.
- Configure Form: Use this pane to design forms using the UI elements available in the Field Controls pane.
- Properties: Use this pane to view the properties of the UI element selected in the Configure Form pane.
- 3. Click Edit. Then, double-click or drag and drop the required UI elements from the Field Controls pane to the Configure Form pane.
- 4. Select UI elements, one at a time, and configure their properties in the **Properties** pane.

The available properties differ based on the type of UI element.

Refer to the following table for property descriptions:

Property	Description
Published	Switch Published to ON to publish the field.
Field	Specifies the field label.

Property	Description
	To change the field labels, double-click the corresponding Value
	cell.
	For example, Mapping Specification Approved On.
	Specifies the type of the field.
Туре	To select field types, double-click the corresponding Value cell.
	For example, Date Picker.
	Defines the pick list fields that can be used as controlling fields. It
Dependencies	works only with the Reference Data Manager connector.
Dependencies	To define pick list fields, select the fields from the drop down
	option.
	Specifies the connectors for the field.
	To enter option values, click Configure Values .
	Use the following options:
Configure Values	• Default connector: Use this option to enter option values
	manually or using an MS Excel file.
	Reference Data Manager: Use this option to pull option val-
	ues from reference tables in the Reference Data Manager.
Mandatory	Specifies whether the field is mandatory.
	Specifies the field description.
Description	To enter field descriptions, double-click the corresponding Value
	cell.
Visible in Exten-	Switch Visible in Extended Properties to ON to make it visible on
ded Properties	the Extended Properties tab.
Order	Specifies the order of the field on the Extended Properties tab.
	To enter the order number, double-click the corresponding Value
	cell.
	You can also drag and move fields in the Configure Form pane to
	change its order.

5. Click **Save**.

The form is saved and is available on the **Extended Properties** tab.

You can download extended properties in the XLSX format and use it as a template to import extended properties. To download extended properties, on the Extended Properties tab, click **Export To Excel**.

Default Connector

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the default connector to import option values from an MS Excel file or enter them manually.

To configure option values using the default connector, follow these steps:

- 1. In the **Configure Form** section, click the required UI element. Ensure that you are in edit mode.
- 2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the **Connectors** page, ensure that the Default Connector option is selected. Then, click Next.

The <UI Element> Options page appears. For example, if the UI element is Combo Box, the Combo Box Options page appears.

Default Connector

4. Use the following options:

Add

Use this option to enter text and value manually.

Import Excel

Use this option to import options from MS Excel files.

5. After configuring option values, click Save.

To add option values manually, follow these steps:

- 1. Click Add.
- 2. Enter values in the Text and Value fields.

The Text corresponds to options whereas the Value corresponds to underlying value of an option. You can add as many values as needed.

Default Connector

3. Click Save.

The option values appear in the UI element under the Configure Form section.

To import option values from MS Excel files, follow these steps:

1. Click Import Excel.

The Upload Excel page appears.

2. Click Choose File and select the required MS Excel file.

The Upload Excel page appears. It displays the data in the MS Excel file.

3. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

4. Select the appropriate option.

Field corresponds to options and Value corresponds to value of an option. You can import multiple columns. Use Clear Selection to undo the selection.

5. Click 1.

The <UI_Element> Options page appears. It displays the imported columns. You can delete a row that is not required. To delete rows, click a row and then click **Delete**.

6. Click Save.

The option values appear in the UI element under the Configure Form section.

Reference Data Manager

When you configure extended properties using UI elements, such as combo box, radio button, and list, you also need to configure their option values. You can use the Reference Data Manager connector to import option values from tables in the Reference Data Manager.

To configure option values using reference data manager connector, follow these steps:

- 1. In the **Configure Form** section, click the required UI element. Ensure that you are in edit mode.
- 2. In the **Properties** section, click **Configure**.

The Connectors page appears.

3. On the Connectors page, click Reference Data Manager and then click Next.

The Reference Data Manager page appears. It displays the reference folders in the Connector View pane.

4. In the **Connector View** pane, expand a reference folder and select a reference table.

The Parameters pane displays the columns in the reference table. You can also click Preview to view the data in the reference table.

Reference Data Manager

5. In the **Parameters** pane, click the radio button next to the required column.

You can select the controlling field from the drop down option. Ensure that you define the required dependencies in the Properties pane and that the option values for controlling field are configured using the same reference column.

6. Click Finish.

The Extended Properties Configuration page appears.

Reference Data Manager

- 7. Under the **Properties** section, switch **Load on Startup** to **ON**.
- 8. Click Save.

The option values are configured. For example, in the following form the List of Cities is the controlling field for Selected City. Both the fields get their option values from the same reference column.

Importing from Excel

You can import user-defined properties of a mapping specification from an XLSX file. You can either use an existing XLSX file or download a extended properties file from a mapping specification. Ensure that the XLSX file follows the correct template.

To import extended properties from XLSX files, follow these steps:

1. On the Extended Properties tab, click Import From Excel.

The Upload Excel page appears.

- 2. Click Choose File.
- 3. Browse and select the XLSX file.
- 4. Click

The Upload Excel page appears. It displays the data in the XLSX file.

5. Double-click the **Select Column To Import** cell in the required column.

The available options appear.

Importing from Excel

6. Select an appropriate option.

For example, if you select Field, then the selected column is imported as Field.

Similarly, you can also select the Value, Type, and Parentfield columns. Ensure that you at least select a Field column.

7. Click

The extended properties are imported.

Branching and Merging Maps

Branching a map enables multiple users to work on a mapping specification. You can create multiple branches of a parent map depending on the number of users. Different users can work on these branches and make changes in the mapping specification. These branches can then be merged into the parent map.

Branching and merging maps involves:

- Branching maps
- Merging changes into parent maps

Branching Maps

Branching a map means copying the map and pasting it in another subject area or a project. The copied map acts as a child map and the original map is called the parent map.

To branch maps, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a map and hover over the Copy Map.

- 3. Click Copy Selected.
- 4. Right-click the Mappings node under the required project or subject area.

Branching Maps

5. Click Paste.

The mail comments page appears.

6. Enter Mail Comments and click

The map is copied successfully into the subject area or the project. You can rename the child map and modify as needed. For example, you can change the reference

Branching Maps

table, business rule, or add or remove columns. For more information on renaming mappings, refer to the Updating Map Spec Overview topic.

If you enable notifications in Mapping Manager Settings, project users receive an email notification when the map is copied to a project. For more information on configuring notifications, refer to the Configuring Notifications topic.

Merging Changes into Parent Maps

After making the required changes in a child map you can merge it with a parent map. You can also notify project users about the merge through email notifications.

To merge child maps with parent maps, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the **Workspace Mappings** pane, right-click a parent map.

3. Click Merge Mapping.

The Merge Map page appears.

Merging Changes into Parent Maps

- 4. Select a child map.
- 5. Click **2**.

The Merge Map page shows the changed data with respect to the parent map.

6. Use the following options:

Overwrite existing version

Use this option to overwrite the existing version.

Create New Version

Use this option to create new version of the parent map.

- 7. Enter relevant Mail Comments.
- 8. Click

The child map is merged with the parent map.

If you enable notifications in the Mapping Manager Settings the project users receive mail comments through an email notification. For more information on configuring notifications, refer to the Configuring Notifications topic.

Deleting Maps

You can delete maps that are not required in a project. You can also opt to delete all the versions of a map.

To delete maps, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the **Workspace Mappings** pane, select a map or multiple maps.

You can use shift key to select multiple maps.

3. Right-click the selection.

4. Click **Delete Mapping(s)**.

The Delete Mappings-Selected Mappings List page appears.

Deleting Maps

5. Use the following options:

Remove Mapping from Current Selection ()

Use this option to remove mappings from the current selection.

Delete all Versions

Use this option to delete all versions of the mappings.

Delete Current Version

Use this option to delete current version of the maps.

Viewing Workflow Logs

A default workflow, Mapping_Manager_Default_Workflow is assigned to all projects in the Mapping Manager. You can also create a workflow and assign it to your project. For more information on assigning workflow to projects, refer to the Managing Mapping Manager Workflows section.

You can view the flow of actions of the workflow assigned to a map. Along with other information, the workflow displays the current state of the map in the workflow.

To view workflow logs, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

By default, the Mapping Specification tab opens.

3. Click the Workflow Log tab.

The workflow log of the map appears. The current workflow stage blinks in the diagram.

Viewing Workflow Logs

Use the following options:

User Comments ()

Use this option to view users and their comments in each stage.

Expand/Hide Users and Roles

Use this option to view or hide users and roles assigned to workflow stages.

Collapse/Expand Roles

Use this option to switch between the collapsed and expanded roles view. This option is enabled when you are in the Expand Users and Roles view.

Collapse/Expand Users

Use this option to switch between the collapsed and expanded users view. This option is enabled when you are in the Expand Users and Roles view.

Export Image

Use this option to download the workflow in the JPG format.

Analyzing Mappings

This section walks you through the multiple ways of analyzing source to target mappings.

Analyzing mappings involves:

- Data preview
 - Generating virtual preview of target
 - Previewing data through Metadata Tree View
 - Gap analysis
 - Performing table gap analysis
 - Performing column gap analysis
- Impact analysis
 - Running impact analysis for tables and columns
- Lineage analysis
 - Running dual, forward, or reverse lineage analysis
 - Running end to end lineage
- **Business view**
- **Mapping statistics**

Generating Virtual Preview of Targets

When you create a mapping specification, source column values undergo modifications based on the applied transformations. These modified values are updated in target columns based on the target update strategy. You can generate a virtual preview of targets to view the updated target columns.

Mapping specifications involving multiple source or target systems do not support virtual preview of targets.

To generate a virtual preview of targets, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

The Mapping Specification grid appears.

3. Click 🔼

Mapping Preview page appears, displaying the virtual preview of the target based on the source and transformations.

Mapping preview is currently supported for RDBMS only. Here is the list of transformation supported in Mapping Preview:

CONCAT, LTRIM, RTRIM, TRIM, CEIL, FLOOR, RPAD, LPAD, ROUND, SQRT, SUBSTR, UPPER, LOWER, TRUNC, SIN, COS, TAN, SINH, TANH, REVERSE, IS_DATE, IS_NUMBER, IS SPACES, ISNULL, IIF, ISEMPTY, NVL, DECODE.

You can download the mapping preview details in the XLSX format. To download the mapping preview details, click 1.

Previewing Data

You can preview data in a table using the Metadata Tree View pane. You can also enter SQL queries to preview the required data in the database.

To preview data from databases, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a project.

The Metadata Tree View pane appears on the right.

3. In the Metadata Tree View pane, right-click a table and hover over Preview Data.

4. Click any one of the following:

Preview 100 Records

Click this option to preview the first 100 records.

Preview 1000 Records

Click this option to preview the first 1000 records.

Advanced Preview

Click this option to preview data based on a SQL query.

For example, if you click Preview 100 Records, then the User Credentials page appears.

5. Enter **User Name** and **Password** to connect with the database.

You can preview the data based on the options you selected.

If you use Advanced Preview then you need to enter a SQL query in the space provided and click to preview the data.

Previewing Data

Performing Table Gap Analysis

You can perform a table gap analysis and find:

- Tables not being used in mappings
- Tables existing on mapping without valid source or target

You can perform table gap analysis at the following levels:

- System
- Environment
- Table

To perform table gap analysis, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a project.

The Metadata Tree View pane appears on the right.

- 3. In the Metadata Tree View pane, you can right-click a:
 - System: Use this option to run the analysis on all the tables under a system.
 - Environment: Use this option to run the analysis on all the tables under an environment.
 - Table: Use this option to run the analysis on a table.

For example, the following image displays the available options when you right-click a system.

4. Click Table Gap Analysis.

The Table Gap Analysis page appears.

Performing Table Gap Analysis

- 5. Select projects and mappings.
- 6. Click .

The Table Gap Analysis Report for the selected projects and mappings appears.

Performing Table Gap Analysis

Performing Column Gap Analysis

A column gap analysis enables you to find:

- Columns not existing in mappings
- Source columns existing on mappings without valid target
- Target columns listed on mappings without business rule and source column

You can perform column gap analysis at the following levels:

- System
- Environment
- Table

To perform column gap analysis, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a project.

The Metadata Tree View pane appears on the right.

- 3. In the Metadata Tree View pane, you can right-click a:
 - System: Use this option to run the analysis on all the columns under a system.
 - Environment: Use this option to run the analysis on all the columns under an environment.
 - Table: Use this option to run the analysis on all the columns under a table.

For example, the following image displays the available options when you click a system.

4. Click Column Gap Analysis.

The Column Gap Analysis page appears.

Performing Column Gap Analysis

- 5. Select projects and mappings.
- 6. Click .

The Column Gap Analysis Report for the selected projects and mappings appears.

Performing Column Gap Analysis

Running Impact Analysis

A technical asset may act as a source, target, or both in mappings. After mapping source metadata to target metadata, you can run impact analysis on the technical assets. Impact analysis helps you understand upstream and downstream dependencies of technical assets and their impacts linked to business assets. It helps you assess the impact of transformations and source or target-level changes. Apart from this, you can also, view lineages based on selected assets and export its impact analysis.

You can run impact analysis at the following levels:

- System
- **Environment**
- Table
- Column

Running Lineage Analysis

After mapping source metadata with target metadata, you can run the lineage analyzer on the mapping through the Mapping Specification grid. The generated data lineage report helps you trace the data's origin, its transformations, and its destination after source to target mappings.

You can run the lineage at the following levels:

- System
- **Environment**
- <u>Table</u>
- Column

System

You can run forward and reverse lineage analysis to trace metadata at the system level. Forward lineage analysis generates lineage with the system as source. And, reverse lineage analysis generates lineage with the system as target. The Dual-Combined View lineage analysis generates a lineage, which includes both forward and reverse lineage.

This topic walks you through the following:

- Viewing Lineage
- Working on Lineage

Viewing Lineage

To run lineage at the system level, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click the required mapping.

The Mapping Specification grid appears.

3. Select a row.

4. Right-click a system and hover over Lineage Analyzer.

The options available for Lineage Analyzer appear.

- 5. Hover over any one of the following:
 - Forward: Use this option to view forward lineage.
 - **Reverse**: Use this option to view reverse lineage.
 - **Dual Combined View**: Use this option to view combined forward and reverse lineage.

For example, when you hover over Forward, All Projects and By Project appear as options.

6. Use the following options:

All Projects

Use this option to include all the projects in lineage analysis.

By Project

Use this option to select projects for lineage analysis.

By default, all projects are selected. Clear the check boxes for the projects that are not required. Then, click

The system's forward lineage is generated based on the options you selected. Similarly, you can generate reverse, and dual lineage for a system. By default, the lineage appears in Graphical View.

- 7. You can click **Graphical View** or **Grid View** to switch between them:
 - Graphical View: The graphical view displays the lineage of a system in a graphical format. Selecting a system on the graphical view displays its Legends. Hovering over a system displays an oicon. Clicking this icon opens the object's

properties.

Grid View: The grid view displays the lineage of a system in a tabular format. You can view the source and target system associated with the selected system.

Use the following options to work on the lineage in graphical view:

Search (Q)

Use this option to search for systems that you want to see on the lineage.

Type in the search box to see a list of related systems that are available on the lineage.

Filter Objects (∇)

Use this option to filter and display required systems in the lineage view.

The unselected objects are replaced with black dots on the lineage diagram.

Switch View (🖑)

Double-click an object to see Switch View option. Use this option to switch the level of objects displayed and see the system, environment, or table in which the object is located.

Options (🔯)

Use this option to view lineage types, business properties, and customizations options. For more information on lineage options, refer to the Working on Lineage section.

Export ()

Use this option to export the lineage. Click and use the following options:

- Image (2): Use this option to download the lineage as an image, in the .JPG format. Ensure that you expand the required nodes in a lineage before downloading the lineage as image.
- PDF (): Use this option to download the lineage report in the .PDF format. Ensure that you expand the required nodes in a lineage before downloading the lineage report as PDF.
- Excel (): Use this option to download the lineage report in the .XLSX format. Ensure that you expand the required nodes in a lineage before downloading the report.

On the lineage, expand a system node, and select an environment to view its lineage path. The environment is highlighted in orange color, its forward lineage path appears in red, and its reverse lineage path appears in blue. Systems that are not part of a lineage path disappear.

Right-click a path around the selected object to highlight its path of the source or target in the lineage.

Working on Lineage

Lineage of a system shows how metadata moves through systems. It provides a summary of environments used as source and target in a graphical view. Also, it gives you information about the systems and environments involved in the lineage.

Use the following options to work on lineage:

Forward Lineage

Use this option to view forward lineage of the system.

System

Reverse Lineage

Use this option to view reverse lineage of the system.

Dual Lineage

Use this option to view dual lineage, which includes both forward and reverse lineage of the system.

Sensitivity Indicator

Use this option to view sensitivity of the environments in the lineage. You can expand a system node to view sensitive environments. The sensitive system and environments are indicated using •.

Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments and tables.

For example, the following image displays the table's logical name in the lineage.

Expanded Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments, tables, and columns. For more information, on configuring extended properties of a system, refer to the System topic

For example, the following image displays the table's expanded logical name in the lineage.

DQ Tool Score

Use this option to view the data quality score of the environments, tables, and columns in the lineage. You can expand a system node to view data quality scores for environments, tables, and columns.

For example, the following image displays the data quality score in the lineage.

System

Auto Layout

Use this option to rearrange the layout of the lineage automatically. For example, the following image displays the rearranged object layout with respect to the previous screenshot.

System

Overview Lineage

Use this option to view the lineage excluding systems and environments that do not exist in the Metadata Manager. When this option is switched off, the views include systems and environments, that do not exist in the Metadata Manager.

For example, the following image displays lineage excluding assets that do not exist in Metadata Manager.

Overview Pane

Use this option to remove the lineage overview pane from the graphical view.

You can run forward and reverse lineage analysis to trace metadata at the environment level. Forward lineage analysis generates lineage with the environment as source. And, reverse lineage analysis generates lineage with the environment as target. The Dual-Combined View lineage analysis generates a lineage, which includes both forward and reverse lineage.

This topic walks you through the following:

- Viewing Lineage
- Working on Lineage

Viewing Lineage

To run lineage at the environment level, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click the required mapping.

The Mapping Specification grid appears.

3. Select a row.

4. Right-click an environment and hover over Lineage Analyzer.

The options available for Lineage Analyzer appear.

- 5. Hover over any one of the following:
 - Forward: Use this option to view forward lineage.
 - **Reverse**: Use this option to view reverse lineage.
 - **Dual Combined View**: Use this option to view combined forward and reverse lineage.

For example, when you hover over Reverse, All Projects and By Project appear as options.

6. Use the following options:

All Projects

Use this option to include all the projects in lineage analysis.

By Project

Use this option to select projects for lineage analysis.

By default, all projects are selected. Clear the check boxes for the projects that are not required. Then, click

The environment's reverse lineage is generated based on the options you selected. Similarly, you can generate forward, and dual lineage for an environment. By default, the lineage appears in Graphical View.

- 7. You can click **Graphical View** or **Grid View** to switch between them:
 - Graphical View: The graphical view displays the lineage of the environment in a graphical format. Selecting an environment on the graphical view displays its Legends. Hovering over an environment displays an **1** icon. Clicking this icon opens the object's properties.

Grid View: The grid view displays the lineage of the environment system in a tabular format. You can view the source and target system and environment

associated with the selected environment.

Use the following options to work on the lineage in graphical view:

Search (Q)

Use this option to search for environments that you want to see on the lineage.

Type in the search box to see a list of related environments that are available on the lineage.

Filter Objects (∇)

Use this option to filter and display required environments in the lineage view.

The unselected objects are replaced with black dots on the lineage diagram.

Switch View (()

Double-click an object to see Switch View option. Use this option to switch the level of objects displayed and see the system, environment, or table in which the object is located.

Options (🔯)

Use this option to view lineage types, business properties, and customizations options. For more information on lineage options, refer to the Working on Lineage section.

Export ()

Use this option to export the lineage. Click and use the following options:

- Image (): Use this option to download the lineage as an image, in the .JPG format. Ensure that you expand the required nodes in a lineage before downloading the lineage as image.
- PDF (): Use this option to download the lineage report in the .PDF format. Ensure that you expand the required nodes in a lineage before downloading the lineage report as PDF.
- Excel (): Use this option to download the lineage report in the .XLSX format. Ensure that you expand the required nodes in a lineage before downloading the report.

On the lineage, expand a system node, and select a table to view its lineage path. The environment is highlighted in blue color, its forward lineage path appears in red, and its reverse lineage path appears in blue. Systems and

environments that are not part of a lineage path disappear.

Right-click a path around the selected object to highlight its path of the source or target in the lineage.

Working on Lineage

Lineage of an environment shows how metadata moves through environments. It provides a summary of tables used as source and target. Also, it gives information about the environments and tables involved in the lineage.

Use the following options to work on lineage:

Forward Lineage

Use this option to view forward lineage of the environment.

Reverse Lineage

Use this option to view reverse lineage of the environment.

Dual Lineage

Use this option to view dual lineage, which includes both forward and reverse lineage of the environment.

Sensitivity Indicator

Use this option to view sensitivity of the environments in the lineage. You can expand the environment node to view sensitive tables. The sensitive assets are indicated using 🔒 .

Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments and tables.

For example, the following image displays the table's logical name in the lineage.

Expanded Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments, tables, and columns.

For example, the following image displays the table's expanded logical name in the lineage.

DQ Tool Score

Use this option to view the data quality score of the environments, tables, and columns in the lineage. You can expand a system node to view data quality scores for environments, tables, and columns.

For example, the following image displays the data quality score in the lineage.

Auto Layout

Use this option to rearrange the layout of the lineage automatically. For example, the following image displays the rearranged object layout with respect to the previous screenshot.

Overview Lineage

Use this option to view the lineage excluding systems and environments that do not exist in the Metadata Manager. When this option is switched off, the views include systems and environments, that do not exist in the Metadata Manager.

For example, the following image displays lineage excluding assets that do not exist in Metadata Manager.

Overview Pane

Use this option to remove the overview pane from the graphical view.

Table

You can run forward and reverse lineage analysis to trace metadata at the table level. Forward lineage analysis generates lineage with the table as source. And, reverse lineage analysis generates lineage with the table as target. The Dual-Combined View lineage analysis generates a lineage, which includes both forward and reverse lineage.

This topic walks you through the following:

- Viewing Lineage
- Working on Lineage

Viewing Lineage

To run lineage at the table level, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click the required mapping.

The Mapping Specification grid appears.

3. Select a row.

4. Right-click a table and hover over Lineage Analyzer.

The options available for Lineage Analyzer appear.

- 5. Hover over any of the following:
 - Forward: Use this option to view forward lineage.
 - Reverse: Use this option to view reverse lineage.
 - Dual Combined View: Use this option to view combined forward and reverse lineage.

For example, when you hover over Dual - Combined View, All Projects and By Project appear as options.

6. Use the following options:

All Projects

Use this option to include all the projects in lineage analysis.

By Project

Use this option to select projects for lineage analysis.

By default, all projects are selected. Clear the check boxes for the projects that are not required. Then, click

The table's dual lineage is generated based on the options you selected. Similarly, you can generate forward, and reverse lineage for tables. By default, the lineage appears in Graphical View.

- 7. You can click **Graphical View** or **Grid View** to switch between them:
 - Graphical View: The graphical view displays the lineage of the table in a graphical format. Selecting a table on the graphical view displays its Legends. Hovering over a table displays an **1** icon. Clicking this icon opens the object's properties. For more information on updating table properties, refer to the **Updating Table Properties topic.**

Grid View: The grid view displays the lineage of the table in a tabular format. You can view the source and target system, environment, table, and column associated with the selected table.

Use the following options to work on the lineage in graphical view:

Search ($^{\mathbb{Q}}$)

Use this option to search for tables that you want to see on the lineage.

Type in the search box to see a list of related tables that are available on the lineage.

Filter Objects (∇)

Use this option to filter and display required tables in the lineage view.

The unselected objects are replaced with black dots on the lineage diagram.

Switch View (🖑)

Double-click an object to see Switch View option. Use this option to switch the level of objects displayed and see the system, environment, or table in which the object is located.

Options (🍑)

Use this option to view lineage types, business properties and customizations options. For more information on lineage options, refer to the Working on Lineage section.

Export (🗐)

Use this option to export the lineage. Click and use the following options:

- Image (2): Use this option to download the lineage as an image, in the .JPG format. Ensure that you expand the required nodes in a lineage before downloading the lineage as image.
- PDF (): Use this option to download the lineage report in the .PDF format. Ensure that you expand the required nodes in a lineage before downloading the lineage report as PDF.
- Excel (): Use this option to download the lineage report in the .XLSX format. Ensure that you expand the required nodes in a lineage before downloading the report.

On the lineage, expand a table node, and select a column to view its lineage path. The column is highlighted in blue color, its forward lineage path appears in red, and its reverse lineage path appears in blue. The assets that are not part of a lineage path disappear.

Table

Click a path around the selected object to highlight its path of the source or target in the lineage.

Viewing Transformations

Transformations between columns are indicated using Φ in the lineage. Hover over Φ to view transformation rules for the columns on a pop-up. Or, click the path between the columns to highlight it to view detailed transformations between them in the Transformation Details pane.

You can expand the transformation node to view the transformation details that includes Business Rule, Extended Business Rule, Trans lookup Condition, Lookup On, and more relevant properties.

Working on Lineage

Lineage of a table shows how metadata moves through tables. It provides a summary of columns used as source and target. Also, it gives you information about the technical and business properties of columns involved in the lineage.

Use the following options to work on lineage:

Forward Lineage

Use this option to view forward lineage of the table.

Reverse Lineage

Use this option to view reverse lineage of the table.

Dual Lineage

Use this option to view dual lineage, which includes both forward and reverse lineage of the table.

Sensitivity Indicator

Use this option to view sensitivity of the table in the lineage. You can expand the table node to view sensitive columns. The sensitive assets are indicated using facksquare .

Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments and tables.

For example, the following image displays the table's logical name in the lineage.

Expanded Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments, tables, and columns. For more information on configuring extended properties of tables, refer to the Table topic.

For example, the following image displays the table's expanded logical name in the lineage.

Table

DQ Tool Score

Use this option to view the data quality score of the environments, tables, and columns in the lineage. You can expand a system node to view data quality scores for environments, tables, and columns.

For example, the following image displays the data quality score in the lineage.

Auto Layout

Use this option to rearrange the layout of the lineage automatically.

For example, the following image displays the rearranged object layout with respect to the previous screenshot.

Table

Overview Lineage

Use this option to view the lineage excluding systems and environments that do not exist in the Metadata Manager. When this option is switched off, the views include systems and environments, that do not exist in the Metadata Manager.

For example, the following image displays lineage excluding assets that do not exist in Metadata Manager.

Overview Pane

Use this option to remove the lineage overview pane from the graphical view.

You can run forward and reverse lineage analysis to trace metadata at the column level. Forward lineage analysis generates a lineage with the column as source. And, reverse lineage analysis generates a lineage with the column as target. The Dual-Combined View lineage analysis generates a lineage, which includes both forward and reverse lineage.

This topic walks you through the following:

- Viewing Lineage
- Working on Lineage

Viewing Lineage

To run lineage at the column level, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click the required mapping.

The Mapping Specification grid appears.

3. Select a row.

4. Right-click a column and hover over Lineage Analyzer.

The options available for Linear Analyzer appear.

- 5. Hover over any one of the following:
 - Forward: Use this option to view forward lineage.
 - Reverse: Use this option to view reverse lineage.
 - Dual Combined View: Use this option to view forward and reverse lineage of the column combined together.

For example, when you hover over the Reverse, All Projects and By Project appear as options.

6. Use the following options:

All Projects

Use this option to include all the projects in lineage analysis.

By Project

Use this option to select projects for lineage analysis.

By default, all the projects are selected. Clear the check boxes for the projects that are not required. Then, click

The column's reverse lineage is generated based on the options you selected. Similarly, you can generate forward, and dual lineage for columns. By default,

the lineage appears in Graphical View.

- 7. You can click **Graphical View** or **Grid View** to switch between them:
 - Graphical View: The graphical view displays the lineage of the column in a graphical format. Selecting a column on the graphical view displays its Legends. Hovering over a column displays an **1** icon. Clicking this icon opens the object's properties. For more information on updating column properties, refer to the Updating Column Properties topic.

Grid View: The grid view displays the lineage of the environment system in a tabular format. You can view the source and target system, environment, table, and column associated with the selected column.

Use the following options to work on the lineage in graphical view:

Search (Q)

Use this option to search for columns that you want to see on the lineage.

Type in the search box to see a list of related columns that are available on the lineage.

Filter Objects (♥)

Use this option to filter and display required columns in the lineage view.

The unselected objects are replaced with black dots on the lineage diagram.

Switch View (()

Double-click an object to see Switch View option. Use this option to switch the level of objects displayed and see the system, environment or table in which the object is located.

Options (🍑)

Use this option to view lineage types, business properties and customizations options. For more information on lineage options, refer to the Working on Lineage section.

Export ()

Use this option to export the lineage. Click and use the following options:

- Image (): Use this option to download the lineage as an image, in the .JPG format. Ensure that you expand the required nodes in a lineage before downloading the lineage as image.
- PDF (): Use this option to download the lineage report in the .PDF format. Ensure that you expand the required nodes in a lineage before downloading the lineage report as PDF.
- Excel (): Use this option to download the lineage report in the .XLSX format. Ensure that you expand the required nodes in a lineage before downloading the report.

On the lineage, expand a table node, and select a column to view its lineage path. The column is highlighted in blue color, its forward lineage path appears in red, and its reverse lineage path appears in blue. Assets that are not part of a lineage path disappear.

Right-click a path around the selected object to highlight its path of the source or target in the lineage.

Viewing Transformations

Transformations between columns are indicated using • in the lineage. Hover over • to view transformation rules for the columns on a pop-up. Or, click the path between the columns to highlight it to view detailed transformations between them in the Transformation Details pane.

You can expand the transformation node to view the transformation details that includes Business Rule, Extended Business Rule, Trans lookup Condition, Lookup On, and more relevant properties.

Working on Lineage

Lineage of a column shows how metadata moves through columns. It provides a summary of columns used as source and target. Also, it gives information about technical and business properties of columns involved in the lineage.

Use the following options to work on lineage:

Forward Lineage

Use this option to view forward lineage of the column.

Reverse Lineage

Use this option to view reverse lineage of the column.

Dual Lineage

Use this option to view dual lineage, which includes both forward and reverse lineage of the column.

Sensitivity Indicator

Use this option to view sensitivity of the columns in the lineage. You can expand the environment node to view sensitive columns. The sensitive assets are indicated using

Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments and tables.

For example, the following image displays the table's logical name in the lineage.

Expanded Logical Name

Use this option to view expanded logical names of the tables and columns in an environment in the lineage. You can expand a system node to view environments, tables, and columns. or more information on configuring extended properties of columns, refer to the Column topic.

For example, the following image displays the table's expanded logical name in the lineage.

DQ Tool Score

Use this option to view the data quality score of the environments, tables, and columns in the lineage. You can expand a system node to view data quality scores for environments, tables, and columns.

For example, the following image displays the data quality score in the lineage.

Auto Layout

Use this option to rearrange the layout of the lineage automatically. For example, the following image displays the rearranged object layout with respect to the previous screenshot.

Overview Lineage

Use this option to view the lineage excluding systems and environments that do not exist in the Metadata Manager. When this option is switched off, the views include systems and environments, that do not exist in the Metadata Manager.

For example, the following image displays lineage excluding assets that do not exist in Metadata Manager.

Overview Pane

Use this option to remove the lineage overview pane from the graphical view.

Running End to End Lineage

You can run end to end lineage analysis at project level and trace the data between any two mapping projects. The end to end lineage report can be drilled down further to trace intermediate stages of data.

To run end to end lineage at project level, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click the required source project.

The available options appear.

3. Click End to End Lineage.

The Select Target page appears.

- 4. Select a target subject or a target project.
- 5. Click ✓.

The End to End Lineage Summary page appears. You can drag and arrange column positions on the page for better visibility.

Use the following options to work on the End to End Lineage Summary page:

Navigate

Use ⇒ or ← to navigate.

Expand ()

To expand the lineage summary, use . The expanded summary shows the intermediate stages of data.

Reset Column Ordering (也)

Use this option to reset the column order on the page.

Export (🕙)

Use this option to export the lineage summary in the XLSX format.

Opening Business View

You can open a concise view of mappings with an ability to instantly generate lineage and impact analysis. It is an alternate view for both workspace and published maps and more suitable for business users.

To open business view of mappings, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a map.

The available options appear.

Click Mapping Alternate View.

The Mapping Summary page appears. It has two sections, Mapping Details and Mapping Specifications.

Opening Business View

Mapping Details

It displays mapping details that includes mapping specification name, version, target update strategy, and lists of target and source tables.

Mapping Specification

It displays the Mapping Specification grid with source and target details.

Under the Mapping Details and Mapping Specification sections, you can click a <Table_Name> or <Column_Name> to view their respective details.

Table Details

To view table details, on the **Mapping Summary** page, click < Table Name>.

The Table Details page appears. By default, the Impact Analysis tab opens. You can view direct, indirect, and other impacts of the table.

For more information on impact analysis, refer to the Running Impact Analysis topic.

You can click the following tabs to work on the Table Details page:

- Data Lineage: This tab displays the forward and reverse lineage of the table. For more information on lineage of tables, refer to the Table topic.
- Extended Properties: This tab displays the extended properties configured for the table. For more information on configuring extended properties, refer to the Extending Table Properties topic.
- **Table Properties**: On this tab, you can view the table properties. For more information on table properties, refer to the Updating Table Properties topic.
- Columns: This tab displays a list of columns in the table.
- Workflow Log: This tab displays the workflow log of the table. For more information on configuring workflows, refer to the Workflow Manager topic.
- Data Quality: On this tab, you can preview and profile the data in the table. For more information on previewing and profiling data, refer to the Previewing Data topic.

- Documents: On this tab, you can view or add documents related to the table.
- **Test Specifications**: On this tab, you can view the test cases related to the table. For more information on test cases, refer to the Creating Test Cases topic.

Column Details

To view column details, on the Mapping Summary page, click <Column Name>.

The Column Details page appears. By default, the Impact Analysis tab opens. You can view direct, indirect, and other impacts of the column.

For more information on impact analysis, refer to the Running Impact Analysis topic.

You can click the following tabs to work on the Column Details page.

Data Lineage: This tab displays the forward and reverse lineage of the column. For more information on lineage of columns, refer to the Column topic.

- Extended Properties: This tab displays the extended properties configured for the column. For more information on configuring extended properties, refer to the **Extending Column Properties** topic.
- Column Properties: This tab displays the column properties. For more information on column properties, refer to the Updating Column Properties topic.
- **Workflow Log**: This tab displays the workflow log of the column. For more information on configuring workflows, refer to the Workflow Manager topic.
- Valid Values: This tab displays the codesets assigned to the column as valid values. For more information on assigning codesets to columns, refer to the Assigning Codesets to Columns topic.
- **Documents**: This tab displays the uploaded documents related to the column.

Viewing Mapping Statistics

You can view mapping statistics and view the following information about mapping specifications:

- Total rows
- Number of target tables
- Targets not mapped
- Sources not mapped
- **Business rules**
- Lookups

To view mapping statistics, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click the required map.

The Mapping Specification grid appears.

3. click 🌣.

The mapping statistics are shown with hyperlinks.

Viewing Mapping Statistics

You can click the required hyperlinks to get the detailed information.

Associating Mappings

This section walks you through the process of associating mappings with the following:

- Code Mappings or Code Crosswalks
- · Reference Tables
- Requirements

It involves:

- Associating code maps with data item mappings
- Associating reference tables with mappings
- Linking requirements with mappings

Associating Code Maps with Data Item Mappings

A code map can be associated with a data item mapping to standardize data across the organization. These code maps are maintained in Codesets Manager. For more information on codesets and code mappings, refer to the Codeset Manager section.

Before associating a code map with data item mappings, ensure that you publish the code map.

Publishing Code Maps

To publish code maps, follow these steps:

- 1. Go to Application Menu > Data Catalog > Codeset Manager > Codeset Mappings.
- 2. In the **Code Mappings Workspace** pane, right-click a code map.

The available options appear.

3. Click Publish.

The Publish Codeset Map page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Codeset Map Name	Specifies the name of the code map.
	For example, Gender Crosswalk.
Codeset Map Version	Specifies the new version of the code map.
	For example, 1.02.
Codeset Map Description	Specifies the description about the code map.
	For example: The codeset map is the code mappings between the
	two codesets, Misc Gender Codes and Gender.
Map Version Label	Specifies the version label of the code map.
	For example, Beta.
Map Changed Description	Specifies the description about the changes made in the code map.
	For example: Code values were updated.
Publish Envir- onment	Specifies the environment where the code map is being published.
	For example, test.
	You can create publish environments in Enterprise Codesets.

Associating Code Maps with Data Item Mappings

Field Name	Description
	For more information on creating publish environments, refer to the
	Publishing Codesets topic.

5. Click

The code map is published and it can be found in the Published Code Mappings pane under the selected Publish Environment.

A new version of the code map is created under the Mappings tree.

A published code map can be associated with a mapping in the Mapping Manager. The published code map is available under the Code Mappings Catalog.

Associating Code Maps

To associate published code maps with data item mappings, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the **Workspace Mappings** pane, click the required map.

The Mapping Specification grid appears.

- 3. Click 2.
- 4. In the Mapping Specification grid, right-click the header menu.

Select the **CSM Mapping** check box.

The CSM Mapping Column appears in the Mapping Specification grid.

- 6. In the right pane, expand Code Mapping Catalog.
- 7. Drag the code map into the Mapping Specification grid and drop it under the CSM Mapping column for the required row.

8. Click 📆.

The code map is associated with the data item mappings.

Associating Reference Tables with Mappings

Reference data sets the permissible values for other data fields. To standardize your data, you can associate a reference table with mappings. Ensure that you publish the required reference table before associating it with mappings.

To associate reference tables with Mappings, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, click a map.

The Mapping Specification grid appears.

- 3. Click 2.
- 4. Right-click the header menu.

Select the **Reference Table** check box.

The Reference Table column appears in the Mapping Specification grid.

6. Drag the reference table from Reference Table Catalog and drop it on the required row under the Reference Table column.

7. Click .

The reference table is associated with the mappings.

Linking Requirements to Mappings

To ensure enterprise-wide traceability, you can link your functional requirements to data mappings.

To link functional requirements to mappings, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. Click a mapping.

The mapping opens in the detailed view.

3. On the Mapping Specification tab, right click the grid header.

A list of header columns appears.

Linking Requirements to Mappings

4. Scroll down the list and select the **Specification Artifact** check box.

The specification Artifact column becomes visible on the Mapping Specification tab.

- 5. In the right pane, click Specification Artifact Catalog.
- 6. Expand the project that contains the required specification.
- 7. Drag and drop the specification on the Specification Artifacts column in the required row.

8. Click .

Requirements are linked to the selected mapping.

Publishing and Creating Versions of Mappings

This section walks you through the process of publishing mappings to corresponding source or target production environments. Production environments of the source and the target are defined in the Metadata Manager. You can also create new versions of the mappings while archiving the older versions.

It involves:

- Creating versions of maps
- Base-lining Projects
- Comparing two different mapping versions
- **Publishing mappings**
- Restoring archived maps as active

Creating Versions of Maps

You can create new version of maps and track history of changes made in the mapping specification. You can also notify and send mail comments to all the project users about the creation of new version. For more information on notifying project users, refer to the Configuring Notifications topic.

To create versions of maps, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a map.

Click New Version.

The New Version page appears.

Creating Versions of Maps

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Mapping	Specifies the mapping specification name.
Name	For example, EDW_PROD_IDS_Benefits_Detail.
Mapping	Specifies the new version of the mapping specification.
Version	For example, 1.02.
Mapping	Specifies the description about the mapping.
Description	For example: This is a map between EDW source and IDS target systems.
	Specifies the version label of the mapping specification.
Version	For example, Beta.
Label	For more information on configuring version display of mapping spe-
	cifications, refer to the Configuring Version Display topic.
Changed	Specifies the description of the changes made in the mapping spe-
Changed Description	cification.
	For example: A business rule for a source column was added.
Mail Com- ments	Specifies the mail comments, which can be sent to the project users
	through an email notification.
11101103	For example: Target update strategy is not updated.

Creating Versions of Maps

Field Name	Description
	For more information on configuring notifications, refer to the Con-
	figuring Notifications topic.

5. Click

A new version of the map is created and the previously active version moves under the archive folder.

Archived maps are in read-only mode and cannot be edited.

Base-lining Projects

Base-lining a project brings all maps in the project to the same version. You can base-line all the maps in a project and record change description and notify all the project users and send mail comments to them.

To base-line projects, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a project.

The available options appear.

3. Click New Baseline.

The New Baseline page appears.

Base-lining Projects

4. Enter Version Label, Change Description, and Mail Comments.

For example:

- Version Label Beta.
 - For more information on version display, refer to the Configuring Version Display topic.
 - Change Description Business rule for all the source column was changed to ASCII.
- Mail Comments The target update strategy needs to be updated. For more information on notifying project users, refer to the Configuring Notifications topic.
- 5. Click

The project is base-lined and all the maps in the project now have the same version. Project users receive email notifications about the base-lining and mail comments, if you enable notifications for it. For more information on configuring notifications, refer to the Configuring Notifications topic.

Comparing Two Different Mapping Versions

You can use the advanced mapping comparison ability to quickly and efficiently compare any

two mapping versions. You can view the changes on a row by row basis and improve your debugging ability.

To compare two different mapping versions, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the **Workspace Mappings** pane, select two mapping versions.
 - Use shift keys to select the two mapping versions.
- 3. Right-click the selection.

The available options appear.

4. Click **Compare To**.

The Compare To page appears. All the changes are highlighted in red color in the comparison report.

Comparing Two Different Mapping Versions

To exclude exporting common rows in the report, select **Exclude Common Rows** Export.

Use the following options to export the comparison report:

- To export the report in the PDF format, click 🔁.
- To export the report in the XLSX format, click **3**.
- To export the report in the HTML format, click .

You can publish a map on an effective date and enter publishing notes for a record. Before publishing mappings, ensure that the source and the target environments have their corresponding production environments.

Publishing Mappings

To publish mappings, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a map.

3. Click Publish Map.

The Publish Map page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Mapping	Specifies the mapping specification name.
	For example, EDW_PROD_IDS_Benefits_Detail.
Name	It is autopopulated and you cannot edit this field.
	Specifies the version of the mapping specification.
Manning	For example, 1.00.
Mapping Version	It is autopopulated.
Version	For more information on configuring version display of maps, refer to
	the Configuring Version Display topic.
	Specifies the version label of the mapping specification.
Version	For example, EDW_PROD_IDS_Benefits_Detail (Alpha).
	For more information on configuring version display of maps, refer to
	the Configuring Version Display topic.
Effective	Use 🕅 to enter the effective date of publishing.
Date	For example, 04/02/2020.

Field Name	Description
Change Description	Specifies the description for changes made in the mapping specification.
	For example: Business rule was modified from ABORT to ASCII for the
	source column ID.
Publish	Specifies the publish notes about the mapping specification.
	For example: The mapping specification is approved for publishing on 1
	Feb 2020.

5. Click

The mapping is published on the effective date and saved in the Published Mappings pane. The source and the target environments in the published mapping are updated to their corresponding production environments. All previously published versions of the same mapping are stored in the History folder. A published mapping cannot be edited.

A new version of the mapping is automatically created in Workspace Mappings that can be edited.

To view published map details, in the **Published Mappings** pane, click the <Mapping Name>.

The business view of the mapping appears which can be used to run impact analysis, lineage analysis, and data quality etc. For more information on business view, refer to the Opening Business View topic.

Updating Publishing Details

To update publishing details of published maps, follow these steps:

1. In the Workspace Mappings pane, right-click the required project.

The available options appear.

2. Click Edit Published Maps.

The Edit Publish Mappings page appears. You can use Filter by Effective Date to filter the mappings based on the effective publishing date.

3. In the **Publish Tree** pane, select the required published map.

Now, you can update Publish Notes and Effective Date.

4. Click

The publishing details of the map is updated.

Restoring Archived Maps As Active

When you create a new version of a map, the older version is archived. The archived map is in read-only mode and cannot be edited. You can restore an archived map as an active map and work on the map.

To restore archived maps as active, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click the required archived map.

The Restoring Archived Mapping as Active page appears.

Restoring Archived Maps As Active

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Mapping	Specifies the mapping specification name.
Name	For example, EDW_PROD_IDS_Benefits_Detail.
Mapping	Specifies the new version of the mapping specification.
Version	For example, 1.02.
Mapping	Specifies the description of the mapping.
Description	For example: This is a map between EDW source and IDS target systems.
	Specifies the version label of the mapping specification.
Version	For example, Beta.
Label	For more information on configuring version display of mapping spe-
	cifications, refer to the Configuring Version Display topic.
Changed Description	Specifies the description of the changes made in the mapping spe-
	cification.
	For example: A business rule for a source column was added.
Mail Com-	Specifies the mail comments which can be sent to the project users

Restoring Archived Maps As Active

Field Name	Description
ments	through an email notification.
	For example: Target update strategy is not updated.
	For more information on configuring notifications, refer to the Con-
	figuring Notifications topic.

4. Click

The archived map is restored as a new version and the existing active map is archived.

Exporting Mapping Specifications

This section walks you through the process of exporting mapping specifications. Once the mappings are approved for coding requirements like ETL Jobs, SQL Scripts, Python Code, Spark Code, DDL Scripts, or Stored Procedures then you can export them for further use.

You can export mapping specifications to the following formats:

- **Proprietary XML**
- **TXT**

Proprietary XML Format

Once the mappings are approved for coding, you can export the mappings as coding requirements in the XML format.

To export mapping specifications into proprietary XML format, follow these steps:

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a project.

3. Click Export Mapping Manager XML.

The Export Mapping Manager XML page appears.

4. Select required projects or mappings and click ✓. Selected projects and maps are exported and downloaded as a ZIP file. Unzip this file to use mapping specifications in the XML format.

TXT Format

Once the mappings are considered 'approved for coding', you can export the mappings as coding requirements to automatically generate ETL/ELT jobs for tools, such as Informatica PowerCenter, IBM DataStage, Big Data, and Talend.

- 1. Go to Application Menu > Data Catalog > Mapping Manager.
- 2. In the Workspace Mappings pane, right-click a project.

3. Click Execute Connector.

The Connectors page appears.

4. On the Connectors page, go to relevant tab based on the export requirements and select an ETL tool.

The screenshot below displays Talend tab as an example.

5. Click 3.

The Multi Mapping page appears.

6. Select the required mappings and click 1. The following notification appears.

7. Click **Download File**.

Selected projects and maps are exported and downloaded as a ZIP file. Unzip this file to use mapping specifications in the TXT format.

Creating and Managing Test Cases for Mappings

You can create test cases for testing data mappings and ETL processes in the Mapping Manager for:

- Projects
- Mappings

The test cases created at project-level apply to all the mappings created under the project. Whereas, map-level test cases apply to particular map.

Creating and managing test cases involves:

- Creating test cases
- Adding validation steps
- Adding documents
- Managing test cases

In the Mapping Manager, you can define test cases at:

- Project-level
- Map-level

At the project-level, you can create multiple test cases. Whereas, at the map-level, you can create a single test case.

Creating Project-Level Test Cases

To create project-level test cases, follow these steps.

- 1. Go to Application Menu > Data Catalog > Mapping Manager > Workspace Mappings.
- 2. Expand a project and click the **Test Case** node.

The Test Case Summary page appears.

3. Click **⊕**.

The Add New Test Case page appears.

Test cases created for a project are also applicable to the mappings under a project.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Test Case	Specifies the name of the test case.
Name	For example, Verifying the Completeness of Source Metadata.
Test Case	Specifies the unique label for the test case.
Label	For example, Source Metadata.
Type of Test-	Specifies the type of testing.
ing	For example, Metadata Testing.
Test SQL	Specifies the SQL script required in the test execution.
Script	For example, select * from dbo.ADS_ASSOCIATIONS.
	Specifies the test objective in brief.
Description	For example: The objective of the test case is to verify the com-
	pleteness of source metadata.
Expected Res-	Specifies the expected result of the test case in detail.
ult	For example: The source table should have 50 columns.
Actual Result	Specifies the actual test result after the execution of the test.

Field Name	Description
	For example: The source table has 39 columns.
Testing Com-	Specifies the testing comments about the test case.
	For example: The source metadata was scanned from a Sql Server data-
	base.

5. Click Save and Exit.

The test case is created and added to the **Test Cases** node.

Creating Map-Level Test Cases

To create map-level test cases, follow these steps.

- 1. Go to Application Menu > Data Catalog > Mapping Manager > Workspace Mappings.
- 2. Click a mapping and click the **Test Specification** tab.

It displays the existing project-level test cases.

3. Click **⊕**.

The Add New Test Case page appears.

4. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Test Case	Specifies the name of the test case.
Name	For example, Verifying the Completeness of Source Metadata.
Test Case	Specifies the unique label for the test case.
Label	For example, Source Metadata.
	Specifies the priority of the test case.
Priority	For example, High. Priority for business rules and functional test cases
	can be medium or higher.
Type of Test-	Specifies the type of testing.
ing	For example, Metadata Testing.
	Specifies whether the test case is visible even when this map is
Extendable	archived.
	A map is archived whenever you create a new version of the map.
Test SQL	Specifies the SQL script required in the test execution.
Script	For example, select * from dbo.ADS_ASSOCIATIONS.

Field Name	Description
	Specifies the test objective in brief.
	For example: The objective of the test case is to verify the com-
	pleteness of source metadata.
Expected Res-	Specifies the expected result of the test case in detail.
ult	For example: The source table should have 50 columns.
A street Describ	Specifies the actual test result after the execution of the test.
Actual Result	For example: The source table has 39 columns.
Tosting Com	Specifies the testing comments about the test case.
Testing Com- ments	For example: The source metadata was scanned from a Sql Server data-
	base.
Test Case	Specifies the status of the test case.
Status	For example, Passed.
Approved	Specifies whether the test case is approved.

5. Click Save and Exit.

The test case is added under the Test Specification tab.

Once a test case is created, you can enrich it by:

- Adding validation steps
- Adding documents

Managing test cases involves:

- Updating test case status
- Approving test cases
- Exporting test cases
- Deleting test cases

You can add multiple validation steps to the test cases at:

- Project-level
- Map-level

You can also specify actual and expected results for each validation step.

Adding Validation Steps to Project-Level Test Cases

To add validations to project-level test cases, follow these steps.

1. In the Workspace Mappings pane, expand a project and click the Test Case node. The Test Case Summary pane appears.

2. Click ①.

The Add Validation Steps page appears.

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Validation Step	Specifies the type of validation step.
Туре	For example, Data Check.
Ston Namo	Specifies the unique name of the step.
Step Name	For example, Validating Number of Columns.
	Specifies the description of the validation step.
Description	For example: This step validates the number of columns in the
	source metadata.
	Specifies the expected result in detail.
Expected Result	For example: The source table, dbo.ADS_ASSOCIATIONS should
	have 50 columns.
Actual Result	Specifies the actual test result after the execution of the test.
Actual Result	For example: The source table contains 50 columns.
Test Step Com-	Specifies the comments about the step.
ments	For example: The source metadata was scanned from a Sql Server

Field Name	Description
	database.

4. Click Save.

The validation step is added to the test case.

Adding Validation Steps to Map-Level Test Cases

To add validations to map-level test cases, follow these steps.

- 1. In the Workspace Mappings pane, expand a project and click a mapping.
- 2. Click the **Test Specification** tab.
- 3. Double-click a map-level test case.

4. In the bottom pane, click the Validation Steps tab.

The Validation Steps tab appears.

5. Click **⊕**.

The Add New Step page appears.

6. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Step Name	Specifies the unique name of the step.

Field Name	Description
	For example, Validating Number of Columns.
Validation Step	Specifies the type of the validation step.
Туре	For example, Data Check.
Step Status	Specifies the status of the step.
	For example, Passed.
Description	Specifies the description about the validation step.
	For example: This step validates the number of columns in the source
	metadata.
Expected Res- ult	Specifies the expected result in detail.
	For example: The source table, dbo.ADS_ASSOCIATIONS should have
	50 columns.
Actual Result	Specifies the actual test result after the execution of the test.
	For example: The source table contains 50 columns.
Expected Res-	Enter the expected result in detail, including the error-message that
ult	is displayed on screen.
Test Step Com- ments	Specifies the comments about the step.
	For example: The source metadata was scanned from a Sql Server
	database.

7. Click Save.

The validation step is added to the test case.

Adding Documents

You can add supporting documents such as text files, audio files, video files, and so on to a test case at:

- Project-level
- Map-level

Adding Documents to Project-Level Test Cases

To add documents to project-level test cases, follow these steps.

1. In the Workspace Mappings pane, click the Test Cases node of a project.

The Test Case Summary pane appears.

2. In the bottom pane, click **Document Upload** and click **①**.

The Add Test Case Document page appears.

3. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Document Name	Specifies the name of the added document to the test case.
	For example, Source Metadata Details.
Document Object	Drag and drop document files or use to select and upload doc-
	uments.
Document Owner	Specifies the document owner's name.
	For example, John Doe.
Document Link	Specifies the URL of the document.
	For example, https://drive.google.com/file/I/2sC2_SZIyeFKI7OOn-
	b5YkMBq4ptA7jhg5/view
Intended Use Description	Specifies the intended use of the document.
	For example: The document has information about the source
	metadata.
Approval	Specifies whether the document requires approval.
Required Flag	Select the Approval Required Flag check box to select the doc-

Field Name	Description
	ument status.
	Specifies the status of the document.
	For example, In Progress.
	This field is available only when the Approval Required Flag check
	box is selected.

4. Click Save.

The document is added to the test case and saved under the **Document Upload** tab.

Once a supporting document is added, use the following options:

Preview()

Use this option to preview the document.

Use this option to update the document details.

Delete()

Use this option to delete the document that is not required.

Adding Documents to Map-Level Test Cases

To add documents to map-level test cases, follow these steps.

- 1. In the Workspace Mappings pane, click a mapping and click the Test Cases node of a project.
- 2. Double-click a map-level test case.

The Test Overview page appears.

Click the **Document Upload** tab.

4. Click ⊕

The Add Test Case Document page appears.

5. Enter appropriate values in the fields. Fields marked with a red asterisk are mandatory. Refer to the following table for field descriptions.

Field Name	Description
Document Name	Specifies the name of the physical document being attached to the
	test case.
	For example, Source Metadata Details.
Document Object	Drag and drop document files or use 📤 to select and upload doc-
	ument files.
Document Owner	Specifies the document owner's name.
	For example, John Doe.
Document Link	Specifies the URL of the document.
	For example, https://drive.google.com/file/I/2sC2_SZIyeFKI7OOn-
	b5YkMBq4ptA7jhg5/view
Intended Use Description	Specifies the intended use of the document.
	For example: The document has information about the source
	metadata.

Field Name	Description
Approval	Specifies whether the document requires approval.
	Select the Approval Required Flag check box to select the doc-
	ument status.
	Specifies the status of the document.
	For example, In Progress.
	This field is available only when the Approval Required Flag check
	box is selected.

6. Click Save.

The document is added to the test case.

Once a supporting document is added, use the following options:

Preview()

Use this option to preview the document.

Use this option to update the document details.

Delete(**)

Use this option to delete the document that is not required.

Managing Test Cases

Managing project-level or map-level test cases involve:

- Updating test cases
- **Exporting test cases**
- Deleting test cases

Managing Project-Level Test Cases

To update project-level test cases, follow these steps

To update test cases, follow these steps:

1. In the Workspace Mappings pane, click the Test Cases node.

- 2. In the **Test Case Summary** pane, click the required test case.
- 3. In the **Test Case Overview** tab, click **2**.
- 4. Update the necessary information. For more information n fields, refer to Creating Test Cases topic.

To export a test case, click the test case in the **Test Case Summary** pane, and click **1**.

Managing Map-Level Test Cases

To update map-level test case, follow these steps:

1. In the Workspace Mappings pane, click a map and click the Test Specification tab.

2. Click

The Map and Test Cases Status page appears. You can update test case status in the Test Cases Grid and Map Test Status in the bottom pane.

To approve map-level test cases, follow these steps:

1. In the Workspace Mappings pane, click a mapping, and click the Test Specification tab.

2. Click .

The Approved Test Cases page appears.

- 3. Select the check box against the test case under the **Approved** column.
- 4. Click Save.

To export a test case, click the test case in the **Test Case Summary** pane, and click **1**.

The Mapping Manager Dashboard displays metrics that help you analyze and track your projects and mappings. It presents this information using charts and graphs.

To access Mapping Manager Dashboard, follow these steps:

1. Go to Application Menu > Data Catalog > Mapping Manager.

2. Click the Mapping Manager Dashboard pane.

The Mapping Manager Dashboard appears.

It displays the following panes:

- **Statistics**: It displays a snapshot of statistics related to mapping projects.
- Mapping Summary: It displays the number of mappings in each project.
- Mapping Status: It displays the number of mappings in each mapping state.
- Proactive Impact Analysis Truncation Impacts: It displays the number of instances of source truncation in each project.
- Project Overview: It displays the number of subjects, mappings, and assigned users in each project.
- Mapping Classification: It displays the number of active, archived, and published mappings in each project.
- Mapping Assignments: It displays the number of designers, approvers, developers, and testers assigned to mappings
- Sources/Targets Not Mapped: It displays the number of sources and targets not mapped in each project.
- **Test Case Status**: It displays the number of test cases under a test case status.
- **Project Test Cases**: It displays the number of test cases in each project.
- **User Test Cases**: It displays the number of test cases created by each user.

Statistics

The Statistics pane displays the total number of projects, subjects, mappings, source tables, target tables, possible truncations, and users. For example, in the following image there are sixteen projects, eighty-six mappings, forty-four source tables, forty-six target tables, eightyfour possible truncations, and four users.

You can click the hyperlink to view further details. For example, if you click the hyperlink for the Target Tables. The Target Table Details page appears.

Mapping Summary

The Mapping Summary pane displays the number of mappings in each project in a pie chart. To open the chart in the Dashboard View, click the pie-chart.

Each slice of the pie chart corresponds to a project. You can drill down and view detailed information in the list format. To view detailed information about mappings in a project, click a slice. The Details View tab opens. It displays project name, subject name, map name, and map version.

Mapping Status

The Mapping Status pane displays the number of mappings under each mapping state in a pie chart. By default there are two mapping states, In Progress and Approved. You can create your own mapping states depending on your requirements. For more information on creating mapping states, refer to the Configuring Mapping State Settings topic.

To open the chart in the Dashboard View, click the pie chart.

Each slice corresponds to a mapping state. You can drill down and view detailed information in the list format. To view detailed information about maps in a mapping state, click a slice of the pie-chart.

Proactive Impact Analysis - Truncation Impacts

The Proactive Impact Analysis - Truncation Impacts pane displays the number of instances where the target column length is smaller than the source column length in each project in a pie-chart. To open the chart in the Dashboard View, click the pie chart.

Each slice of the pie chart corresponds to a project. You can drill down and view detailed information in the list format.

To view detailed information about truncated sources in a project, click a slice of the pie chart. The Details View tab opens. It displays project name, subject name, map name, source and target column names.

Project Overview

The Project Overview pane displays the number of subjects, mappings, and assigned users in each project in a bar graph. To open bar graph in the Dashboard View, click the bar graph.

Each set of three bars corresponds to a project. You can view detailed information in the list format. To view the Detailed information about mappings, subjects, or assigned users of a project click the corresponding bar. For example, if you click the mappings bar then the Mappings tab opens.

To view a list of subjects, click the **Subjects** tab.

To view a list of the assigned users, click the **Assigned Users** tab.

Mapping Classification

The Mapping Classification pane displays the number of active, archived, and published mappings in each project in a bar graph. To open the bar graph in the Dashboard View, click the bar graph.

Each set of three bars corresponds to a project. You can drill down and view detailed information. To view detailed information about status of mappings in a project, click a bar. The Details View tab opens. It displays project name, subject name, map name, map version, and status.

Mapping Assignments

The Mapping Assignments pane displays the number of designers, approvers, developers, and testers assigned to mappings in each project in a bar graph. For more information on mapping assignments, refer to the Assigning Mapping Specifications to Users topic.

To open the bar graph in the Dashboard View, click the bar graph.

Each set of three bars corresponds to a project. You can drill down and view detailed information in the list format. To view detailed information about mapping assignments in a project, click a bar. The Detail View tab opens. It displays project name, subject name, map name, assigned user's full name, and assignment status.

Sources/Targets Not Mapped

The Sources/Targets Not Mapped pane displays the number of sources and targets not mapped in each project in a bar graph. To open the bar graph in the Dashboard View, click the bar graph.

Each set of two bars corresponds to a project. You can drill down and view detailed information in the list format. To view the detailed information about sources and target not mapped in a project, click a bar. The Details View tab opens. It displays project name, map name, and target and source details.

Test Case Status

The Test Case Status pane displays the number of test cases under a test case status in a pie chart. To open the chart in the Dashboard View, click the pie chart.

Each slice of the pie chart corresponds to a test case status. You can drill down and view detailed information in the list format. To open the detailed information about test cases, click a slice. The Details View tab opens. It displays project name, map name, and test case names.

Project Test Cases

The Project Test Cases pane displays the number of test cases in each project in a pie-chart. To open the chart in the Dashboard View, click the pie chart.

Each slice in the pie chart corresponds to a project. You can drill down and view detailed information in the list format.

To view the detailed information about test cases in a project, click a slice of the pie chart. The Details View tab opens. It displays project name, subject name, map name, test case ID, test case name, and test case label.

User Test Cases

The User Test Cases pane displays the number of test cases created by each user in a piechart. To open the chart in the Dashboard View, click the pie chart.

Each slice of the pie chart corresponds to a user. You can drill down to view detailed information in the list format.

To view the detailed information about test cases created by a user, click a slice of the piechart. The Details View tab opens. It displays project name, subject name, map name, test case ID, test case name, and test case label.
