Understanding your Support

Review support maintenance programs and offerings.

Registering for Support

Access the <u>erwin support</u> site and click **Sign in** or **Sign up** to register for product support.

Accessing Technical Support

For your convenience, erwin provides easy access to "One Stop" support for all editions of <u>erwin Data Modeler</u>, and includes the following:

- Online and telephone contact information for technical assistance and customer services
- Information about user communities and forums
- Product and documentation downloads
- erwin Support policies and guidelines
- Other helpful resources appropriate for your product

For information about other erwin products, visit <u>http://erwin.com/products</u>.

Provide Feedback

If you have comments or questions, or feedback about erwin product documentation, you can send a message to <u>techpubs@erwin.com</u>.

Introduction

One of the major features of erwin Data Modeler (DM) is its capability to reverse engineer from databases. However, you have to run reverse engineering (RE) processes manually and limit them to your workday. Thus, during the RE process, the other features of erwin DM are unavailable for use. Also, to configure and run another RE process, one needs to wait until the first process is complete.

erwin DM Scheduler enables you to schedule RE jobs in advance and run them without supervision. Thus, improving the original capability of reverse engineering. A live log keeps you updated about the job status.

Additionally, you can configure the scheduler to save reverse engineered models to a predefined location on your device and on the Mart.

Installing erwin DM Scheduler

erwin DM Scheduler is one of the components in erwin Data Modeler (DM) installer. Installing it installs erwin DM Scheduler Service in your environment.

Installing erwin DM Scheduler installs Windows Resource Kit Tools. It is not a prerequisite, and you can uninstall it without affecting erwin DM Scheduler's function. However, this set of tools assists you to manage issues in permissions and security for erwin DM Scheduler. It helps you troubleshoot in case you do not have appropriate privileges to use erwin DM scheduler windows service.

To install erwin DM Scheduler, follow these steps:

1. On erwin DM installer, ensure that erwin DM Scheduler is not disabled and click Next.

🕷 erwin Data Modeler 🦳 (64-bit) - InstallShield Wiz	zard X

erwin DM Scheduler Windows Service	
✓ Local System Auto Start	
Domain\Username	
Password	
Selecting Local System creates "NT Authority\SYSTEM" based erwin DM Scheduler Service. It	
requires administrative privileges. Providing domain credentials creates a domain-based erwin DM Scheduler service. You can add non-administrator user accounts (Username and Password that can use the domain-based instance of erwin DM Scheduler Service.	
InstallShield < Back Next > Cancel	_
< Back Next > Cancel	

You can create a local administrator user-based service or a domain-based non-administrator service.

For a non-administrator user, ensure that you do not select the Local System check box.

To be able to connect to the Mart from the Scheduler using Windows Authentication, instead of Local System, use Domain\Username to create the erwin DM Scheduler Service. For example, the following image shows the Domain\Username format:

itype dards	Volu	metrics	Add-Ins		Selected n Picture	Report Designer		erwin DM Scheduler			Op
<u>a - 8</u>											

Getting Started

Once you have installed erwin DM Scheduler, to use it, follow these steps:

- 1. Start erwin Data Modeler (DM).
- 2. On the ribbon, click **Tools**.
- 3. Click erwin DM Scheduler.

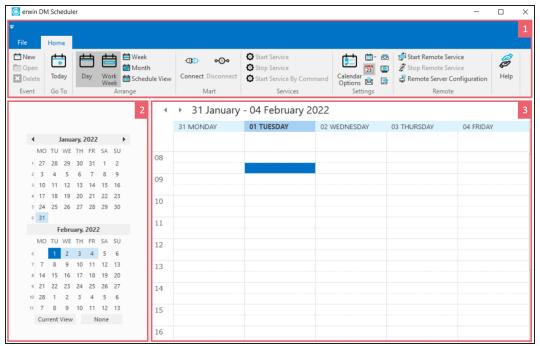

Then, if you are an administrator user, click **Start Service**. If you are a non-administrator user, the service starts automatically.

This opens the Scheduler in a new window.

In a Microsoft Windows 7 environment, starting or stopping the erwin DM Scheduler Service through erwin DM Scheduler may display a warning. In that case, use Windows Services to start or stop the service.

erwin DM Scheduler has a tri-pane layout that consists of the ribbon, navigation pane, and calendar view.

Getting Started

Pane	Function
1-Ribbon	The Home tab of the ribbon contains all the actions that you can perform
	in the Scheduler.
	It enables you to do the following:
	1. Create or work on jobs
	2. Manage erwin Mart connection
	3. Manage erwin DM Scheduler Service
	4. Manage erwin DM Scheduler settings
	5. Set up remote servers
	6. Customize the calendar view pane
	7. Access help
2-Nav-	The navigation pane (date picker) enables you to navigate today, work
igation	week, week, or month depending on your calendar view.
(Date	
Picker)	
3-Calendar	The calendar view displays the detailed view and the jobs scheduled dur-
view	ing the day, work week, week, or month depending on your calendar
	view.

Using erwin DM Scheduler

The tasks that you can perform in erwin DM Scheduler can be classified into two types:

- **Core tasks**: These are the tasks that you perform to schedule and run a reverse engineering (RE) job.
- **Support tasks**: These are tasks that you perform to customize and configure the Scheduler.

Core Tasks

The core function of the Scheduler is scheduling and running a reverse engineering job. To schedule and run an RE job, do the following:

- Schedule jobs
- Set reverse engineering options

Based on the options that you select or the way you want to set up jobs, perform the following tasks:

- Connect to erwin Mart
- Set up predefined reverse engineering options
- Set up remote server
- Set recurrence
- Reschedule, copy, and delete jobs
- View event log
- View Scheduler Event Reports

Support Tasks

You can customize the appearance of the Scheduler and configure the fields and options that are displayed on the interface. To customize and configure, do the following:

- Customize the calendar view layout
- Set Calendar Options
- Set Time Scale and Time Zone

Using erwin DM Scheduler

- Display or hide the Navigation pane (Date Picker)
- Set up email notifications
- Set up Tray Service options

You can schedule reverse engineering jobs, set recurrences, run jobs on a remote server, and label and categorize jobs using the Scheduler.

Before scheduling a job, ensure that you do the following:

- Local job: On the ribbon, go to Home > Services. Then, click Start Service.
- Remote server job: On the ribbon, go to Home > Remote. Then, click Start Remote Service.

When you schedule a reverse engineering job for SQL Server 2019 using Windows authentication method, ensure you start the scheduler using the Start Service by Command option.

To schedule reverse engineering (RE) jobs, follow these steps:

- 1. Create an event in one of the following ways:
 - On the ribbon, go to **Home** > **New**.
 - In the Calendar view, double-click a time slot under the day of your choice.
 - In the Calendar view, right-click a time slot under the day of your choice and click **Add new event**.

rwin DM Schedu	uler Event Details					>

The erwin DM Scheduler Event Details screen appears.

2. Configure event options based on your requirement. Refer to the following table for field description.

Option	Description	Additional Information
Job Name	Specifies the name of the job	
Job Status	Displays the status of the job	
Label	Specifies the color of the job label	
Start Date	Specifies the start date of the job	Jobs are run serially. Hence, schedule a reas- onable job duration. Ensure that you consider the database, its size, and the approximate job duration of the current jobs, and then schedule

Option	Description	Additional Information
		a new job accordingly.
		Also, in case of multiple jobs scheduled at the same time with the Schedule Now option, the scheduler randomly selects a job to run. There- fore, it is recommended that you do not sched- ule multiple jobs to run at the same time.
Start Time	Specifies the	
	start time of the job	
End Date	Specifies the end date of the job	
End Time	Specifies the end time date of the job	
All day event	Indicates whether it is an all-day event	Selecting this option disables the Start Time and End Time options.
Schedule Now		Selecting this option disables the Start Time, Start Date, End Time, and End Date options and schedules the job to run immediately.
Recurrence	Specifies job recurrence options	This option opens the Scheduling Recurrence dialog box, where you can <u>configure recurrence</u> for repet- itive jobs.
Database	Specifies the database for reverse engin- eering	 If you set Redshift as the database, ensure that you do the following: 1. On the ODBC Data Source Administrator dialog box, go to the System DNS tab.

Option	Description	Additional Information
		 Select the Redshift data source and click Con- figure. The Amazon Redshift ODBC Driver DSN Setup dialog box opens.
		 Under Encrypt Password For, ensure that the All Users of This Machine check box is selec- ted.
Version	Specifies the database ver- sion for reverse engineering	
Predefined List	Displays pre- defined list of reverse engin- eering options	For more information, refer to the <u>Setting Predefined</u> <u>Reverse Engineering Options</u> topic.
Reverse Engineer	Specifies the job's reverse engineering options	On the Reverse Engineering Wizard, where you can <u>connect to the database</u> and <u>configure reverse engin</u> - <u>eering options</u> .
Remote	Indicates whether a remote server is used for reverse engineering	
Predefined Server Con- figuration	Displays the lists of pre- defined remote servers for reverse engin- eering	For more information, refer to the <u>Setting Predefined</u> <u>Reverse Engineering Options</u> topic.
Server New	Specifies the IP	

	Option	Description	Additional Information
		address of a	
		server in case a	
		new remote	
		server	
Ρ	ort	Specifies the	
		port number of	
		the new remote	
		server	

3. Click OK.

Your RE job is scheduled. It runs as configured, and the job status and its event log is displayed.

Depending on the settings you make and the job duration that you set, the job tile displays the following information about the job:

- Name
- Status

- Start and end times
- Run time

This topic walks you through the steps to schedule a reverse engineering job with a MongoDB model as an example. Similarly, you can schedule a reverse engineering job from any other databases.

For more information on database specific connection parameter options, refer to <u>Database</u> <u>Connection Parameters</u> topic. For database-specific reverse engineering options, refer to the <u>Reverse Engineering Options for Databases</u> section.

When you click the **Reverse Engineer** option on the erwin DM Scheduler Event Details page, the Reverse Engineering Wizard appears.

To set up revere engineering options, follow these steps:

1. On the erwin DM Scheduler Events Details screen, click Reverse Engineer.

erwin DM Scheduler Event Details				×

Save To Mart	Specifies whether the reverse engineered model is saved to the mart	This option is available only when Using Latest Version is selected.
Target Model	Specifies the location of the target model for CC	
Option Set	Specifies the option set that is used for CC	Advanced Default Option Set: Indicates that all erwin DM metadata is included. CC works slowest with this option.
		Speed Option Set : Indicates that only the essential metadata is included. CC works the fastest with this option set.
		Standard Default Option Set : Indicates that standard metadata is included. CC works fast with this option set compared to the Advanced option set.

13. Click **OK**.

The reverse engineering process starts.

Reverse Engineer from Database		—		×
Reverse Engineer				
	atriauina Viau Ohiasta			-
R	etrieving View Objects		Connel	
			Cancel	

Once the process is complete, based on your selections, a schema is generated, and a model is created.

Setting Recurrence

You can set a recurrence schedule for reverse engineering (RE) jobs that you run repeatedly.

To set recurrence while scheduling a new RE job, follow these steps:

 On the erwin DM Scheduler Event Details screen, click Recurrence. The Scheduling Recurrence dialog box opens.

Scheduling	Recurrence	×		
Schedule t	Schedule time			
S <u>t</u> art:	12:00 PM ~			
E <u>n</u> d:	1:30 PM 🗸			
Duration:	90 minute(s) V			
Recurrence <u>D</u> aily <u>Weekly</u> <u>Monthl</u>	Re <u>c</u> ur every 1 week(s) on:			
Range of I <u>S</u> tart:	7/16/2019 Image: Constraint of the second secon			
	OK Cancel <u>R</u> emove recurrence			

2. Work with the following options:

Schedule time

By default, the time and duration that you set on the erwin DM Scheduler Event Details dialog box is set as the recurrence start and end time, and duration.

Recurrence pattern

Specifies whether the job should run daily, weekly, or monthly. Depending on the pattern that you select, further settings are available as follows:

- **Daily**: Set the day interval at which the job should run. Or, set it to run every workday. For example:
 - Run the job every 2 days.
 - Run the job every workday (Monday-Friday).

For the Daily-WorkDays combination to work, ensure that you have strictly set the workdays to Monday through Friday in Calendar Options. For more information on setting work days, refer to the <u>Setting Calendar Options</u> topic.

- Weekly: Select the weekly interval and the days of the weeks on which the job should run. For example, run the job every 2 weeks on Monday and Thursday.
- **Monthly**: Select the day of the month and the monthly interval at which the job should run. For example:
 - Run the job every second day, every two months.
 - Run the job second Thursday, every two months.

Range of recurrence

Set the start date of the recurrence. Also, set either the end date or the number of occurrences of the job that you want to run.

3. Click **OK**.

To set recurrence for an existing job that has been scheduled, follow these steps:

- Right-click a job event and click **Properties**.
 The erwin DM Scheduler Event Details dialog box opens.
- 2. Click Recurrence.

The Scheduling Recurrence dialog box opens.

3. Follow step 2 given above.

Stopping Recurrence

To stop recurrence for a job, follow these steps:

- Right-click a job event and click **Properties**.
 The erwin DM Scheduler Event Details dialog box opens.
- Click Recurrence.
 The Scheduling Recurrence dialog box opens.
- 3. Click Remove recurrence.

Connecting to Mart

You can save a reverse engineered model at a predefined location in your mart. However, to save a model to a mart, you need to be connected to it.

Connecting to erwin Mart On Cloud (With SSO user) using API is restricted.

For more information on saving a reverse engineered model to a predefined location on the mart, refer to the <u>Setting Reverse Engineering Options</u> topic.

Ensure that you have configured and initialized erwin Mart Server.

To connect to a mart, follow these steps:

1. On the ribbon, in the Mart group, click **Connect**.

The Connect to Mart screen appears.

2. Work with following fields:

Server Name

Specifies the name of the web server where you have installed the Mart.

Mart on premises:

Indicates the server where your Mart is installed

For example, localhost or an IP address

• Mart on cloud:

Indicates the server name where you access your Mart.

For example, company.myerwin.com

The server name follows the <servername>.myerwin.com format.

Port

Specifies the port number to access the web server.

Default port numbers are as follows:

- Mart on premises: 18170
- Mart on cloud: 443

Use IIS

Specifies that you want to use the IIS web server to connect to Mart. This check box is enabled only if you have configured IIS. For more information about configuring IIS, see the Implementation Guide (Workgroup Edition).

If you use IIS, open server.xml file available at C:\Program Files\erwin\Mart Server r9\Tomcat64\conf and un-comment <Connector port="8009" protocol="AJP/1.3" allowedRequestAttributesPattern=".*" redirectPort="8443" secretRequired="false"/>.

IIS Port

Specify the IIS port number that you want to use. This field is enabled only if you select the Use IIS check box. The default is 80.

Use SSL

Specifies that you want to connect to the Mart through a secured connection. SSL lets you access the Mart through a secured connection. This check box is enabled only if you have configured SSL on your web server.

To connect to erwin Mart on Cloud, ensure that you select the Use SSL (https) checkbox.

If you use IIS with SSL, open server_ssl.xml file, which is available at C:\Program Files\erwin\Mart Server r9\Tomcat64\conf and uncomment Connector port="8009" protocol="AJP/1.3" allowedRequestAttributesPattern=".*" redirectPort="8443" secretRequired="false"/>.

Application Name

Specifies the application name of the Mart that you want to connect to.

Application names are as follows:

- Mart on premises: MartServer
- Mart on cloud: MartServerCloud

Authentication

Specifies the type of authentication you want to use. You can use a user name that is authenticated by the Mart Server application.

- Server Authentication: Indicates that the Mart connection uses a erwin Mart Server authenticated user.
- Windows Authentication: Indicates that the Mart connection uses a Windows authenticated user.

If you are a non-administrator user, to be able to use Windows Authentication, ensure that you clear the Local System check box. Then, use your Windows <<Domain\Username>> and password to start the erwin DM Scheduler Service.

erwin DM Scheduler Serv	ice	Х
User Credentials		
Local System		
Domain \ Username:	mydomain\myuser	
Password:	••••••	
	Remember my credentials	
	OK Cancel	

User Name

Defines the name of the user that has access to the Mart. If you are using a Windows-authenticated user name, enter it in the <domain name>/<user name> format.

A local Windows user who does not belong to a domain or who is not part of an Active Directory cannot log in to the Mart as a Windows user.

Password

Defines the password of the user.

A password should fulfill the following criteria:

- Contains at least 1 lowercase character
- Contains at least 1 uppercase character

- Contains at least 1 number
- Is minimum 6 characters in length
- Is maximum 130 characters in length Apart from the above criteria, special characters are optional.
- 3. Click Connect.

If you have selected Use SSL and the security certificate is installed, you are connected to the Mart.

For erwin Mart on Cloud, only one session per user is allowed. That is, you can either use erwin Mart Administrator on cloud or connect to erwin Mart on Cloud via erwin Data Modeler.

For example, if you are logged on to erwin Mart Administrator and then, connect to erwin Mart on Cloud via erwin Data Modeler, your erwin Mart Administrator session is terminated.

After you connect to the Mart, if you click Connect to Model Manager again, a dialog opens seeking your permission to disconnect from the Mart.

Connecting to Mart

If your security certificate is not installed, a message, The certificate authority is invalid or incorrect, appears. You must install the security certificate to proceed.

a. Click **OK** on the message.

The SSL Certificate Install dialog opens.

b. Click Install.

The Certificate dialog opens.

c. Click Install Certificate.

The Certificate Import Wizard dialog opens.

- d. Click Next.
- e. Click the Place all certificates in the following store option button and click **Browse**.
- f. In the Select Certificate Store dialog, select **Trusted Root Certification Authorities** and click **OK**.
- g. Click Finish.

The security certificate is installed and you are connected to the Mart.

Reading Job Status

The Scheduler indicates job status using several visual cues follows:

- When the job is running, its progress is indicated as approximate percentage of completion on the job event tile.
- Job schedule is indicated on the job event tile and on job event tooltips.
- Job status is indicated on job event tile and job event tooltips, and by a color code as follows:

Color Code	Description			
	Indicates that the job is scheduled			
2	Indicates that the job is running			
	Indicates that the job has been completed successfully			
	Indicates that the job encountered an error			

Viewing Event Log

The Scheduler generates an event log for each RE job that you run. To view the event log, follow these steps:

1. In the Calendar View, right-click a job event tile.

2. Click Event log.

The Event Log Viewer screen appears.

	Event Log Vie	wer	- 0	х	
		nformation rent Schedule	Image: Constraint of the second se

Close					

By default, it displays all types of messages for the current schedule. Work with the following fields to customize the event log.

- a. **Log Level**: Select or clear the message type check boxes to include or exclude certain message types.
- b. **Event ID**: Select whether you want to view the log for all events or the current schedule.
- c. Last Rows: Specify the number of latest rows of the event log that you want to display.

Viewing Event Log

3. To regenerate the event log with any changes that you made, click **Refresh**.

You can work on an existing job to reschedule, edit, copy, or delete it. Right-click a job and work on the following options:

- **Rerun Event**: Runs the job event again.
- **Copy Event**: Copies the job and its settings. You can then paste the copied job on the date and time of your choice.

- Cancel Event: Cancels the job event and stops it from running.
- Delete Event: Deletes the job from the calendar
- **Event log**: Opens the Event Log Viewer screen. It displays the event log of the job. For more information, refer to the Viewing Event Log topic.
- Properties: Opens the erwin DM Scheduler Event Details screen. Edit the required settings. For more information, refer to the <u>Scheduling Jobs</u> topic.

Viewing Scheduler Events Report

The Scheduler generates an event log for each RE job that you run. To view the event log for all the jobs, follow these steps:

On the ribbon, click Scheduler Events Report.
 The Scheduler Events Report screen appears. It displays the list of jobs and their

_	Error Cancel	Processing	With Recurrence			
Schedule Date Start:	· End:	-		-	R	efresh
Job Start Time	Schedule Start Time	Job Name	Remote	User	Job Status	DB Info
2021.09.29 04:58:37	2021.09.28 12:00:00	SQLRERemote	10.1.85.252	sa	Job_Success	SQL Server 201
2021.09.29 04:49:20	2021.09.28 11:30:00	SQLRE	10.1.85.252	sa	Job_Success	SQL Server 201

Use the following options to filter and view the event log:

- Job Status: Select one or more options to filter events log based on the job status. You can filter based on successful, failed, canceled, or jobs in progress, with or without recurrence.
- Scheduled Date: Select a date range to view event logs within start and end date.

Setting Up Remote Server Configurations

You can use erwin DM Scheduler to schedule reverse engineering (RE) jobs on a remote instance of erwin Data Modeler. You can configure multiple remote machines as servers and set up jobs to run in parallel on these servers. This saves time and provides you with an improved performance by distributing reverse engineering jobs across multiple servers.

To use remote servers to run RE jobs, ensure that:

- the remote server is running
- the remote server configuration is set up on your local Scheduler
- the local server configuration is set up on your remote Scheduler

To set up remote server configuration, follow these steps:

 On the ribbon, go to Remote > Remote Server Configuration. The Remote Server Configuration screen appears.

Remote Server Configuration	×
Local Configuration Server (IP): Please input local IP address.	
Port: 18150 Change Server Configuration	
Server:	
Port: Test	
Description:	
Label: Sky Blue 🗸	
New Add Save Delete	Import
Server 🖉 Port 🕖 🖓 Description	🍰 Label
OK Cancel	

2. Configure the remote server based on your requirement. Refer to the following table for field descriptions.

Section	Option	Description		
Local Con-	Server (IP)	Specifies the IP address of the local host.		
figuration	Port	Specifies the service port number for the remote sched- uler. This field displays the default port number. Click Change to update the port number.		
Server Con-	Server	Specifies the IP address of the remote server.		
figuration	Port	Specifies the port number for remote server.		
Description Specifies the description for the remot		Ensure that the remote server is running before testing the connection.		
		Specifies the description for the remote server.		
		Specifies the label color to categorize the server con- figuration.		

Once you have added remote server configuration, click Test.
 The erwin DM Scheduler screen appears on a successful connection.

erwin DM Scheduler \times			
Connection is successful			
ОК			

4. Click Add.

The remote server configuration is added to the list of remote servers.

Remote Server (Configura	tion			×
Local Configura	ation localhost				
Server (IP):	localitost	_			
Port:	18150			Chan	ge
Server Configu	ration				
Server:	192.168.	0.184

		OK	Cance		

Once you have set up a remote server configuration, use one of the following options:

- **New**: Use this option to set up another remote server. Selecting this option resets any information entered on the screen.
- **Save**: Use this option to save any changes to selected remote server configuration.
- **Delete**: Use this option to delete any selected remote server configurations.

Import: Use this option to import an existing remote server configuration. Select a server and click **Import**. This imports the This option is available when server information is configured under Server Configuration section.

The import replaces the existing server configuration with the latest configuration.

- 5. Once you have set up a remote server configuration, use one of the following options:
 - **New**: Use this option to set up another remote server. Selecting this option resets any information entered on the screen.
 - **Save**: Use this option to save any changes to selected remote server configuration.
 - **Delete**: Use this option to delete any selected remote server configurations.
 - Import: Use this option to import an existing remote server configuration.
 Select a server and click Import. This imports the remote server and replaces the existing remote server configurations.

The import replaces the existing server configuration with the latest configuration.

Click OK.

Remote server configuration is saved and is available in the Predefined Server Configuration list on the erwin DM Scheduler Event Details screen.

Customizing and Configuring the Scheduler

The customization and configuration that you make in the scheduler lets you define Scheduler settings with respect to its appearance and behavior. To customize and configure the Scheduler, do one or more of the following:

- Customize the calendar view layout
- Set Calendar Options
- Set Time Scale and Time Zone
- Display or hide the Navigation pane (date picker)
- Set up email notifications
- Create and import reverse engineering configuration
- Setup tray service option

Customizing the Calendar View

To customize the calendar view, do the following:

• On the ribbon, in the Arrange group, click one of the options given in the following table:

Option	Description		
Day	visplays the day in the calendar view		
Work Week	isplays only the work days of the week in the calendar view		
	In <u>Calendar Options</u> , under Week view, if you clear the Multi-column mode check box, the Work Week setting defaults to Week mode.		
Week	Displays the complete week in the calendar view		
Month	Displays the current month in the calendar view		
Schedule View	Displays the selected calendar and the schedule in the cal- endar view. This option is useful while comparing two or more calendars.		

Setting Calendar Options

To set calendar options,

On the ribbon, in the Settings group, click Calendar Options. The Options dialog box opens.

Options		
Calendar Work Week days □Su ☑Mo ☑Tu ☑We ☑Th ☑Fr □Sa	Day view Time scale: 30 minutes V Time zone	Week view Month view Show time as docks Show time as docks Show end time Show end time Multi-column mode Compress weekend days
Start time: 08:00 \lor End time: 17:00 \lor	Show minutes on Time scale	Weeks count: 5 \checkmark
Timeline view Date Picker Compact events Use Year Arrows Caption Bar features Hide now Hide now Use One line layout Other Use read-only mode	Min scale time: 06:00 V Max scale time: 23:59:59 V	Tooltips: Standard Standard Show tooltip under mouse cursor Tags <name>,<status>,<history>,<time> Use custom tooltip</time></history></status></name>

Work on the options given in the following table:

Section	Option	Description
Calendar Work Week days		Select the days that form the work week and set the start and end time of a work day.
Timeline view	Compact Events	Specify whether the timeline displays events in a compact layout. This setting is applicable to the Schedule View of the calendar view.
Date Picker	Use Year Arrows	Specify whether the navigation pane (date picker) displays ways to navigate the year.
Caption		Set the appearance of Calendar view's caption bar.
Bar fea-	Hide now	Specify whether the caption bar is hidden.
tures	Use One line layout	Set the width of the caption bar to a single line.
Other	Use read-only mode	Specify whether job properties are editable.

Setting Calendar Options

Section	Option	Description			
Day view		Set the appearance of the Day view of the calendar.			
	Time scale	Set calendar view's time interval.			
	Time zone	Set default time zone to be used. Also, you can set an addi- tional time zone.			
		Specify whether the time scale displays minutes on it. This setting takes effect only when you set the time scale to less than 30 minutes.			
	Min scale time	Set the time at which the time scale begins.			
	Max scale time	Set the time at which the time scale ends.			
Week view		Set the appearance of the Week view of the calendar.			
	Show time as clocks	Specify whether a clock icon is used to display job times.			
		This option works only when the Multi- column Mode is not selected.			
	Show end time	Specify whether the job tile displays the job end time.			
		This option works only when the Multi- column Mode is not selected.			
	Multi-column mode	Specify whether the calendar view displays days in columns or tiles.			

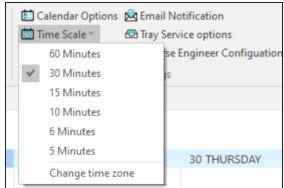

Setting Calendar Options

Section	Option	Description		
Month		Set the appearance of the Month view of the calendar.		
view	Show time as clocks	Specify whether a clock icon is used to display job times.		
	Show end time	Specify whether the job tile displays the job end time.		
	Compress weekend days	Specify whether the weekend days are displayed in a single column.		
	Weeks count	Set the number of weeks that the calendar view displays		
Tooltip		Specify tooltip settings.		
	Tooltips	 Select the type of tooltip. Standard: Displays job times, job name, job status, and job execution time Custom: Displays the event ID, job times, and job name. This tooltip type overrides all the other tool-tip settings. Disabled: Disables the tooltip 		
	Show tooltip under mouse cursor	Specify whether the tooltip is displayed under the mouse cursor.		
	Tags	Specify the items (tags) that are displayed in case of custom tooltips.		
		Due to a limitation from a third-party com- ponent, the keyboard shortcuts to cut, copy, and paste text do not work in this field.		
	Use custom tooltip	Specify whether the custom tooltip set in the Tag field should be used.		

Setting Time Scale and Time Zone

To set the Time Scale, do one of the following:

- Using the ribbon:
 - On the ribbon, in the Settings group, click **Time Scale** and select a time interval.

- Using Calendar Options:
 - On the ribbon, in the Settings group, click Calendar Options. The Options dialog box opens.
 - Under Day view, select the time interval. For more information, refer to the <u>Setting Calendar Options</u> topic.

By default, the current time zone is set according to your current location. However, you can set an additional time zone. To do that, do the following:

- 1. On the ribbon, in the Settings group, click one of the following:
 - Calendar Options > Time zone
 - Time Scale > Change time zone

The Time Zone dialog box opens. You can set a label to the current time zone

Setting Time Scale and Time Zone

Time Zone		×
Current time :	zone	
Label:	1	
Time zone:	(UTC+05:30) Chennai, Kolkata, Mumbai, New Delhi 🛛 🗸	
✓ Automation	ically adjust clock for daylight saving changes	
Show an add	ditional time zone	
Label:	Trial	
Time zone:	(UTC+09:30) Adelaide	
✓ A <u>u</u> tomation	cally adjust clock for daylight saving changes	
	OK Cancel	

- 2. Select Show an additional time zone.
- 3. Set a label to the additional time zone.
- 4. From the **Time zone** drop-down list, select a time zone.
- 5. Click **OK**.

Displaying the Data Picker

To display or hide navigation pane (date picker), do the following:

• On the ribbon, in the Settings group, click **Date Picker**. This setting is a toggle control that displays or hides the navigation pane (date picker) depending on its current state.

Setting up Email Notifications

To set up email notifications, do the following:

1. On the ribbon, in the Settings group, click **Email Notification**.

The Notification Configuration dialog box opens.

Notification Config	uration	×
E-mail Notificatio Mail server configu Mu):
SMTP Server:	win DM Scheduler Automation 5 (Default port is 25) Use SSL	
User Credentials Username: Password:	Send test message now	Options Job Creation Job Start Job End Error Only Complete Compare Difference
	OK Ca	ancel

Select the E-mail Notification check box.
 The fields on the dialog box are enabled.

Before you configure and send email notifications, ensure that the SendMail.ps1 file is available in the Config folder at C:\Program Files\erwin\Data Modeler r9\.

- 3. In the Mail Server Configuration section, work on the following:
 - From: Add an email address. Emails are sent to the user from the mentioned email address.
 - To and CC: Add an email address or a list of comma-separated email addresses.
 - **Subject**: Enter a notification subject. By default, it is set to erwin DM Scheduler Automation.
 - **SMTP Server**: Enter your SMTP server name in the mail.domain.com format. Notification emails are sent from this server.
 - **SMTP Port**: Enter the port number of your SMTP server. The default port number is 25. If your organization uses an alternate port number for the mail server, enter the port number.
 - Use SSL: Specify whether you want to connect to the server through a secured connection. This check box is enabled only if you have configured SSL on your web server.
- 4. In the User Credentials section, work on the following:
 - **Username**: Enter the username or email address of the account that you want to use to send notifications. Ensure that this account has the rights to send emails in a batch.
 - **Password**: Enter the password of your account.
 - Send test message now: Click Send test message now to verify the settings that you made.
- 5. In the Options section, select the event that triggers an email notification. You can send notifications on job creation, job start, job end, job end due to an error, and the difference generated during complete compare.
- 6. Click **OK**.

Setting Predefined Reverse Engineering Options

You can create or import database reverse engineering configurations and use that configuration as a predefined configuration for scheduling a job. Access these predefined list on the erwin DM Scheduler Event Details page.

To create a reverse engineering configuration, follow these steps:

 On the ribbon, go to Settings > Reverse Engineer Configuration. The Reverse Engineer Configuration List appears.

Reverse Engineering Configuration List X				
Reverse Eng	ineering Configuration			
Name:				
Database:	SQL Server	Version: 2012	~	
	Reverse Engineer			
Import Server:	:	~	Import	
New	Save	Delete	Reset	
😏 Name		ᇕ DB Info 🛛 🛆		
	Do	ne		

Setting Predefined Reverse Engineering Options

2. On the Reverse Engineer Configuration List, use the following options in the below table to create or import configurations.

Option	Description
Name	Enter a name for the configuration.
Database	Select a database type for reverse engineering.
Version	Select a relevant database version for reverse engineering.

Setting Predefined Reverse Engineering Options

Option	Description		
Reverse Engineer	Select this option to specify database options for reverse engineering. The Reverse Engineering Wizard appears.		
	On the Reverse Engineering Wizard, click Connections to set up database connections. For more information on database specific connection parameters, refer to the <u>Database Connection Parameters</u> topic.		
	You can also configure the reverse engineering options avail- able on the wizard. For more information, refer to the <u>Setting</u> <u>Reverse Engineering Options</u> topic.		
Import	Select this option to import configurations saved in a Mart Server.		
	This option is available only when the Mart Server is con- nected. To connect to a Mart Server, refer to the <u>Connecting</u> to Mart topic.		
Server	This displays the Mart Server that you are connected to. Then, click Import to import the saved reverse engineering configuration from Mart. The imported configurations are displayed in the configuration list.		

- 3. Once you have created a configuration, on the Reverse Engineering Configuration List, use one of the following options:
 - New: Use this option to create a new reverse engineering configuration. Selecting this option resets the Reverse Engineering Configuration section to add a new one.
 - Save: Use this option to save the changes to a selected configuration on the list.
 - **Delete**: Use this option to delete the selected configurations on the list.
 - **Reset**: Use this option to reset the data in the Reverse Engineer Configuration section.

Setting Tray Service Options

You can set up custom tooltip name, notification balloon title, and message for your machine using the Tray Service Options pane. The tray service options are applicable for reverse engineering from remote sever connection. Also, ensure the remote service is started to receive system notifications.

To set up tray service options, follow these steps:

 On the ribbon, in the Settings group, click Tray Service Options. The Tray Service Options pane appears.

🙆 Tray Service Options	×
Remote Service Tooltip	
Scheduler Remote Service	Set Tooltip
Show Job Status Message	
	Done

- 2. Under the Remote Service Tooltip section, enter a tooltip name for the remote service icon.
- 3. Click Set Tooltip.

This sets the new tooltip name for the remote service icon.

On the Overflow (Show hidden icons) section of the windows taskbar, hover over the remote service icon to view the updated tooltip.

4. Select **Show Job Status Message** option to display the message content in the windows notification.

Setting Tray Service Options

5. Click Done.

The tray service options are saved. The windows notification message appears based on the above configuration.

The tray service options and notifications are available for remote server configurations. For more information on configuring a remote server, refer to the <u>Setting Up Remote Server Configurations</u> topic.

See the below screenshot for a notification message example.
