Understanding your Support

Review [support maintenance programs and offerings](#).

Registering for Support

Access the [erwin support](#) site and click **Sign in** or **Sign up** to register for product support.

Accessing Technical Support

For your convenience, erwin provides easy access to "One Stop" support for all editions of [erwin Data Modeler](#), and includes the following:

- Online and telephone contact information for technical assistance and customer services
- Information about user communities and forums
- Product and documentation downloads
- erwin Support policies and guidelines
- Other helpful resources appropriate for your product

For information about other erwin products, visit <http://erwin.com/products>.

Provide Feedback

If you have comments or questions, or feedback about erwin product documentation, you can send a message to techpubs@erwin.com.

DM Connect for DI Overview

erwin now offers an integration, **DM Connect for DI**, between two powerful products, erwin Data Modeler (DM) and erwin Data Intelligence Suite (DI Suite). This offering enables you to maintain a single metadata and glossary source across erwin DM and erwin DI Suite using erwin Mart Administrator as an interface. Apart from this, DM Connect for DI offers the following benefits

- Use data models as a foundation for data governance initiatives
- Automatically update data catalog
- Maintain a business glossary based on naming standards

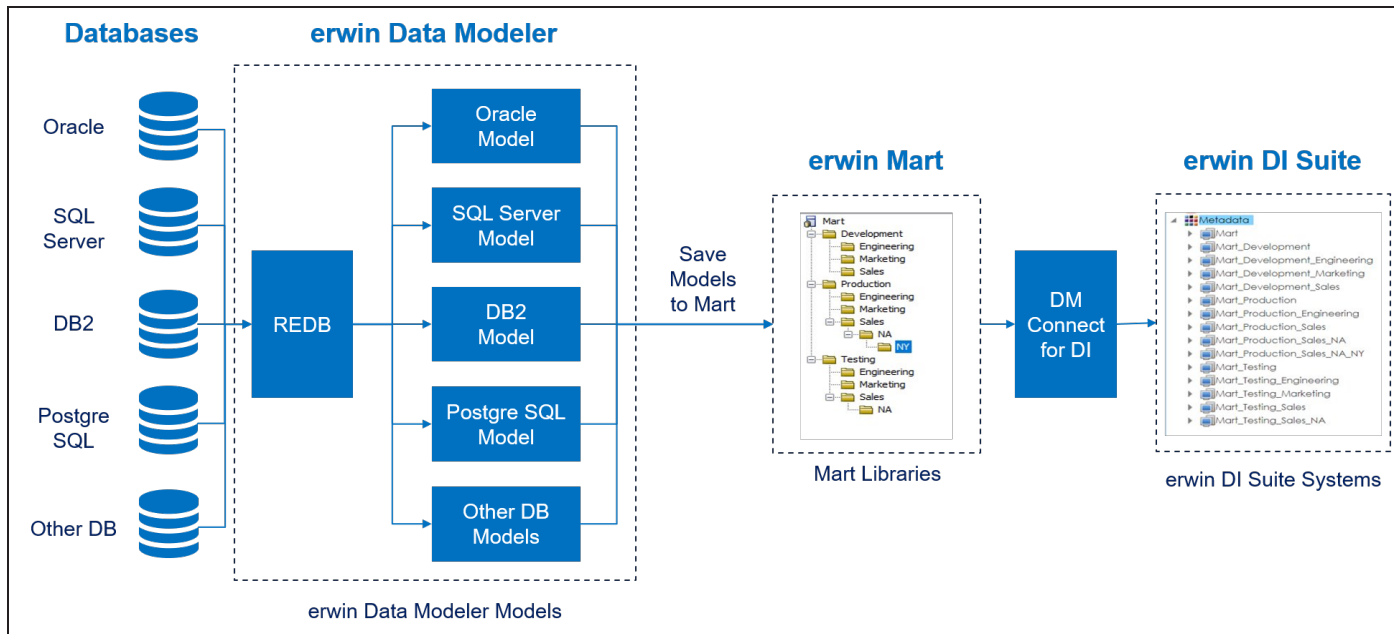

Workflow

erwin DM supports several target databases. It provides a powerful and robust workspace to create rich data models based on these target databases. Further, it provides connectivity to erwin Mart Server (MS); where you can store your rich data models in a mart repository.

erwin Mart Administrator (MA) provides you with a way to interact with erwin MS. It also acts as an interface between erwin DM and erwin DI Suite. It enables you to schedule jobs to export data models and data sources from your mart repository to erwin DI Suite's Data Catalog. Further, it integrates the naming standards set up on your models into the Business Glossary Manager.

erwin DI Suite enables you to use your data models as a foundation for your data governance initiatives. It enables you to maintain a semantic lineage between metadata and business objects.

To summarize, erwin Data Modeler, erwin Mart Administrator, and erwin DI Suite work together as follows.

Prerequisites

Before configuring erwin DM Connect for DI, ensure that the prerequisites for erwin Mart Server and erwin Data Intelligent Suite (DI Suite) are in place:

- System requirements:
 - [erwin Mart Server](#)
 - [erwin DI Suite](#)
- Permissions:
 - [erwin Mart Server](#)
 - [erwin DI Suite](#)
- [erwin DI Suite DocumentsPath](#)

erwin Mart Server System Requirements

Refer to the following tables for minimum system requirements.

Parameter	Requirement
Hardware/Workstation	<ul style="list-style-type: none">• 2 GHZ or higher dual core processor• 4 GB RAM (8 GB or more for large marts)• 10 GB of disk space or more as required to support your specific mart
Operating System	<ul style="list-style-type: none">• Microsoft Windows 8.1• Microsoft Windows 10• Microsoft Windows Server 2012, R2• Microsoft Windows Server 2016• Microsoft Windows Server 2019• Microsoft .NET Framework 4.0 and above• All current Microsoft Windows critical updates
Database	<ul style="list-style-type: none">• Microsoft SQL Server 2016 SP2 or the certified versions 2017 and 2019 <p>Note: For DM Connect for DI, the minimum SQL Server version requirement is SQL Server 2016 SP2</p> <ul style="list-style-type: none">• Oracle 12c R2, 18c, 19c, and 21c

	<ul style="list-style-type: none"> • PostgreSQL through version 9.6.2 or the certified versions 9.6.21, 10.16, and 11.11. Additionally, use PostgreSQL certified version 11.8 for Amazon RDS and Amazon Aurora.
erwin Mart Administrator Web Client - Browser	<ul style="list-style-type: none"> ▪ Microsoft Edge v90 or newer ▪ Mozilla Firefox v88 or newer ▪ Google Chrome v90 or newer ▪ Apple Safari 14 or newer
Tomcat Memory	<p>In the C:\Program Files\erwin\Mart Server r9\Tomcat64\bin\startup.bat file, update the following setting to increase the RAM in MBs:</p> <p>set "CATALINA_OPTS=-Xms256m -Xmx1028m"</p>
Tomcat Memory (Large Mart)	<p>In the C:\Program Files\erwin\Mart Server r9\Tomcat64\bin\startup.bat file, update the following setting to increase the RAM in MBs:</p> <p>set "CATALINA_OPTS=-Xms1024m -Xmx12288m" That is, (1GB - 12GB)</p>

erwin DI Suite System Requirements

Parameter	Requirement
Hardware/Workstation	<ul style="list-style-type: none"> • VM or Dedicated Physical Server • Processor - 64-bit, minimum 4 cores • RAM: <ul style="list-style-type: none"> • 16 GB for limited user POCs • 32-64 GB for enterprise production deployment • Hard Disk Drive - 200-300 GB
Operating System	<ul style="list-style-type: none"> • Microsoft Windows - Windows 10, Windows Server 2012 and above • CentOS 7 • RHEL 6.6 and 7.2 • Amazon Linux 2
Database	<ul style="list-style-type: none"> • SQL Server 2016 SP2 and higher <p>Note: For DM Connect for DI, the minimum SQL Server ver-</p>

	sion requirement is SQL Server 2016 SP2 <ul style="list-style-type: none"> • Oracle 11g and higher
Browser	<ul style="list-style-type: none"> • Microsoft Edge v90 or newer • Google Chrome v28.0 or higher • Mozilla Firefox v16 or higher • Microsoft Edge
Web Servers	Apache Tomcat v8.5.35/41
Web Server Memory Allocation	Allot at least 50 percent of available memory. For example, if available memory is 16GB, allot at least 8GB.
Web Client Workstation	<ul style="list-style-type: none"> • Processor - i3 or higher • RAM - 8GB minimum

In case of enterprise deployment, for the best performance, it is recommended to allot at least 0.5 GB space per user on the application server. For example, if 30 users log on simultaneously, the application server must have at least 15 GB of RAM allocated to it.

Note: The above RAM allocation does not indicate the RAM of the server machine. It indicates the physical RAM allocation to the application server.

Database Server Specifications

The following table lists database server specifications:

Parameter	Requirement
Server Type	Dedicated standalone server
Processor	64-bit, minimum 4-8 cores
RAM	16-32 GB
Hard Disk Drive	250-500 GB
Tablespace	50 GB, minimum

Note: erwin DI Suite requires a dedicated schema/database (SQL Server or Oracle) with at least 50 GB tablespace allocated to it, which increases exponentially based on usage.

Permissions

To use DM Connect for DI, you need certain permissions on erwin Mart Administrator and erwin Data Intelligence Suite (DI Suite).

Minimum erwin Mart Permissions

You can use DM Connect for DI only if your account has been assigned the following profiles:

- Administrator
- Architect

Minimum erwin DI Suite Permissions

erwin DI Suite DocumentsPath

To be able to export data from erwin Data Modeler (DM) to erwin DI Suite, ensure that you update the **iccdocuments.properties** file in erwin DI Suite as follows:

- **Windows:** If you change the default installation location, follow these steps:
 1. Open the **iccdocuments.properties** file from the following location:
Apache Software Foundation\Tomcat 8.5\webapps\<Application Name>\WEB-INF\configuration\properties\iccdocuments.properties
 2. Change the **DocumentsPath** value to the current installation location:
<drivename>:/<application name>

For example, consider you changed the installation location from the default location to:

D:\Apache Software Foundation\Tomcat 8.5\webapps\erwinDISuite\WEB-INF-configuration\properties.

Then, change the **DocumentsPath** to:

D:/erwinDISuite

- **Linux:** Ensure that you follow these steps:
 1. Open the **iccdocuments.properties** file from the following location:
/opt/tomcat/webapps/<<erwinDISuite>>/WEB-

INF/configuration/properties/iccddocuments.properties

2. Change the **DocumentsPath** value to:
opt/tomcat/<application name>

For example, change the **DocumentsPath** from *C:/MappingManager* to:
opt/tomcat/erwinDISuite

Configuration

To use DM Connect for DI, you need to configure your erwin Data Intelligence Suite (DI Suite) application in erwin Mart Administrator. This is the application to which DM Connect for DI would export data models, data sources, and naming standards.

To configure erwin DI Suite, follow these steps:

1. Open the erwin Mart Administrator.
2. On the application menu, click **Settings**.
3. Click **Configuration**.
4. Configure your erwin DI Suite's connection parameters as follows:

Server Name

Specify the server address, where erwin DI Suite is installed.

Port

Specify the port on your server that is used for erwin DI Suite.

Application Name

Specify the name of your erwin DI Suite Application.

Enable SSL

Specify whether you want to connect to the server through a secured connection

Username

Specify your erwin DI Suite user name.

Password

Specify your erwin DI Suite password.

Session Timeout

Specify the erwin DI Suite's session time out duration in minutes.

5. Click **Submit**.
Your connection is tested and saved.

Scenario: Schedule Jobs to Export Data Models to erwin DI Suite

A job converts a model to erwin DI Suite compatible format and then,

- exports the model to the Metadata Manager
- exports the source and target column data from a dimensional model into the Mapping Manager

Note: Once source and target column data is exported, any updates made to them are not exported when the job runs again.

- If the model has an associated NSM file, it exports the file to the Business Glossary Manager

For more information about data sharing between erwin Data Modeler (DM) and erwin Data Intelligence Suite (DI Suite), refer to the [Data Sharing](#) topic.

By default the DM Connect for DI module opens in the Calendar view. You can toggle the page view between the List View () or Calendar View () using the respective buttons on the page toolbar.

To schedule a job, follow these steps:

1. On the DM Connect For DI page, click a suitable calendar slot or click .
The Schedule Job page appears.
2. Set up job parameters as follows:
On the Catalog Information tab:

Select Models

Select models from mart catalog to export.

To view selected models, click . The **Count** field displays the number of selected models.

Include NSM

Select whether naming standards must be exported.

A catalog named by the NSM file is created under **Business Glossary Manager** >

DM NSM Files custom asset.

Note: Ensure that the DM NSM Files asset is enabled in **erwin DI Suite > Business Glossary Manager Settings**.

On the DI Information tab:

System Name

Enter a system name. This corresponds to System in Metadata Manager.

Environment Name

Use the predefined macros to set the environment name. This corresponds to Environment in Metadata manager.

Note: For system and environment names, following special characters are allowed:

- **System:** - (hyphen), _ (underscore), and space
 - **Environment:** @ (at sign), \$ (dollar sign), & (ampersand), / (slash mark), - (hyphen), _ (underscore), and space
- All other special characters are replaced with _ (underscore).

Export Options

Select a suitable export option:

- **Add New:**
 - If an environment exists, this option adds any new tables or columns to it.
 - If an environment does not exist, this option creates an environment and adds tables and columns to it.
- **Update Existing + Add New:**
 - If the existing model objects have changed, this option exports the updates to the existing model objects in erwin DI Suite.
 - Also, it exports any new objects in the model to erwin DI Suite.
- **Update Existing + Add New + Invalidate:**

Along with the functionality of Update Existing + Add New option, this option invalidates any deleted tables or columns.
- **Delete & Reload:**

This option deletes all the tables and columns. Then, it exports them again.

Version

Select whether a version of an existing environment must be created. This archives the existing environment.

On the Job Information tab:

Job Name

Specify a job name.

Scheduled Job On

Select the date and time at which the job must run.

Job Interval

Select a suitable frequency at which the job must run. You can set the job to run once or recur daily, weekly, monthly, or yearly.

Notify Me

Select whether a notification is sent to you when the job status changes. This enables the Notification Email and CC List fields.

Notification Email

Specify the email address at which you want to receive the notification.

CC List

Specify a semi-colon-separated list of email addresses that must receive the job notification

3. Click **Submit**.

The job is added to the calendar for execution with its **Job State** set to Scheduled.

The job runs according to the schedule and exports data model to Metadata Manager and naming standards to Business Glossary Manager.

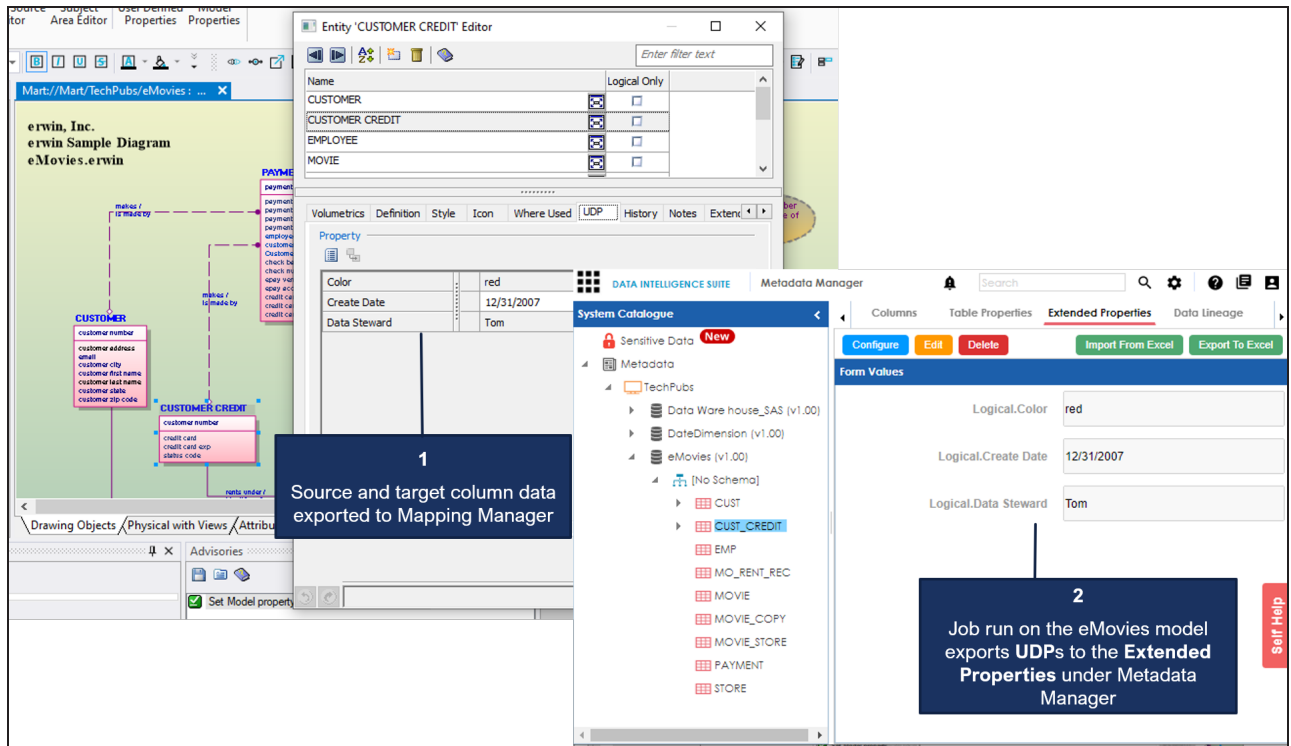

The screenshot displays the erwin Mart Administrator interface. At the top, the 'erwin Mart Administrator' header is visible. Below it, the 'DM Connect for DI' section shows a table of job execution results. A callout box labeled '1' points to the 'Modified On' column, stating: 'Job run on TechPubsModel, TechPubs NSM file attached to the model'.

The 'System Catalogue' on the left shows a tree view of metadata. A callout box labeled '2' points to the 'TechPubsModel (v1.00)' entry, stating: 'Model exported to Metadata Manager'.

The 'Metadata Summary' section in the center shows a table of metadata. A callout box labeled '3' points to the 'TechPubs (6)' entry, stating: 'TechPubs NSM file exported to Business Glossary Manager'.

The 'DM NSM FILE Summary' section on the right shows a list of NSM files. It includes a search bar, 'Items Per Page' (50), 'Page 1', and 'PREVIOUS' and 'NEXT' buttons. The list shows two items: 'TechPubs CUST' and 'TechPubs EMP', both with 'No Description available'.

Also, the UDPs in the model are exported to the Extended Properties tab in Metadata Manager.

Case I: Run Job

The Run Job option immediately runs a job. This option works only if the selected job is a recurring job in the scheduled state.

Case II: Modify Job

The Manage Job option lets you modify an existing scheduled job. If you modify a job:

- before its run schedule, the changes take effect when the job runs
- while it is running, the job is cancelled, and changes are saved. They take effect when the job runs next time.
- after it is past its schedule, the job runs according to the new schedule

Case III: Recurring Job-No Change in Models

Recurring jobs run based on the Job Interval you set while scheduling them. If the models selected in the job have not changed between job intervals, the job still runs according to the schedule. However, no data is exported to erwin DI Suite.

Case IV: New Model in the Folder

If a new model is added to an existing folder on which a recurring job has been scheduled, DM Connect for DI auto-syncs it to the job. The new model is included in the job automatically, when the job runs next.

In case of dimensional model that has associated data sources, DM Connect for DI exports the source and target column data from the model into the Mapping Manager.

Records from 1 to 100Page 1100 rows per page

Scenario: NSM Files

If the models selected in a job have NSM files associated with them, DM connect for DI exports them to the Business Glossary Manager under the custom asset, erwin DM NSM.

Note: Ensure that the erwin DM NSM asset is enabled under **erwin DI Suite > Business Glossary Manager Settings**.

The screenshot shows the 'Business Glossary Manager Settings' window in the 'DATA INTELLIGENCE SUITE'. The left sidebar lists 'BUSINESS ASSETS' with categories: Business Terms (BT), Business Policies (BP), Business Rules (BR), erwin DM NSM (ED), and Stewardship Goals (SG). The 'erwin DM NSM' asset is selected and highlighted in orange. The main panel shows the 'Asset Details' for this asset. Fields include: Name (erwin DM NSM), Title (DM NSM Asset), Description (To Share and reuse model objects within an organization, erwin DM uses Naming Standards for logical and physical objects in the model so that everyone in your organization uses the names consistently and correctly. The entries in this list are used to expand the abbreviated (cryptic) table/column names to Expanded Logical Name in Metadata Manager.), Color (#F6C65B), Documents Required (unchecked), Enable Asset (unchecked), Enable Definition (checked), Enable Sensitivity Fields (unchecked), Display Order (4.0), and Image (a small icon of a document with a checklist). A callout box with the text 'Select Enable Asset' points to the 'Enable Asset' checkbox.

Under the erwin DM NSM asset, each unique NSM file is added as a catalog.

1

Job with 2 models; 2 NSM files, **eMovies.nsm** and **TruistABBV.nsm**

2

- 2 catalogs based on the NSM files attached to the models are created.
- Glossary words from each files are added to the respective catalogs.

Case I: One NSM File, Multiple Models

In a job, if a single NSM file is associated with multiple models, a single catalog is created for both models. The contents of the corresponding catalog under the erwin DM NSM asset type in Business Glossary Manager are overwritten.

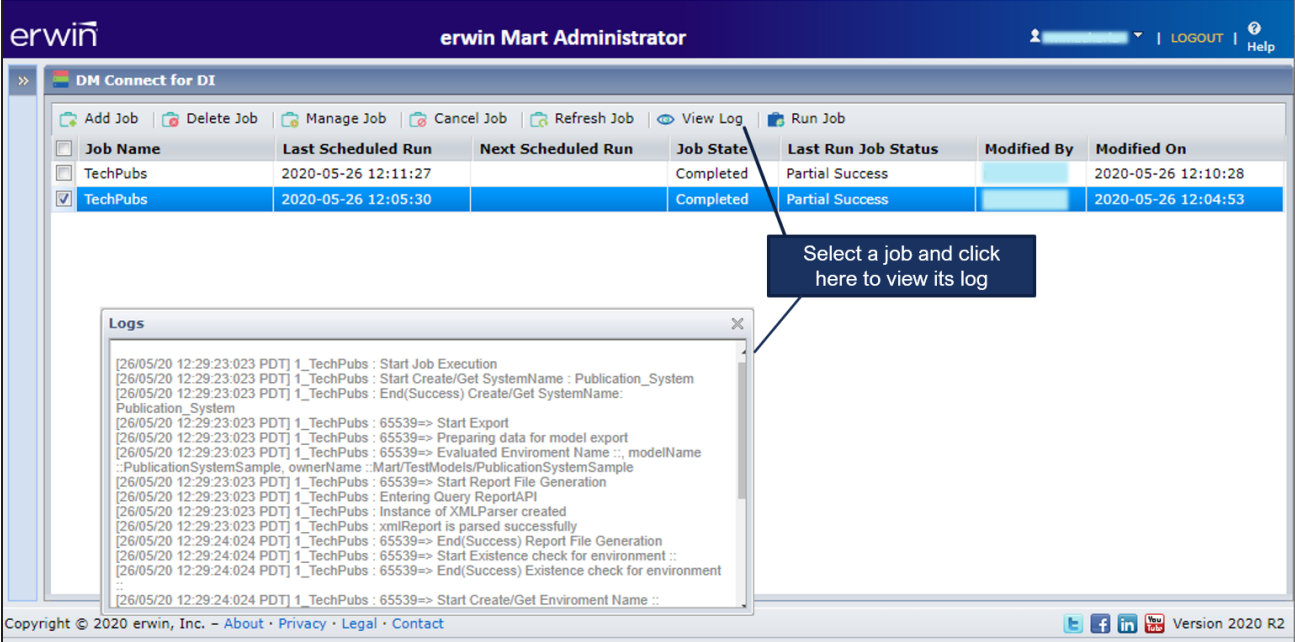

Case II: Multiple NSM Files, Multiple Models

In a job, if multiple NSM files are associated with multiple models, multiple catalogs, corresponding to the NSM files are created under the erwin DM NSM asset type in Business Glossary Manager.

Scenario: View Logs

After a job runs, you can view its log to understand more about the job status. In case of failures, you can then troubleshoot using the logs.

To view a job's log, select a job and click **View Log**.

The screenshot shows the erwin Mart Administrator interface. The top navigation bar includes the erwin logo, the title 'erwin Mart Administrator', and user options like 'LOGOUT' and 'Help'. The main section is titled 'DM Connect for DI' and contains a toolbar with buttons: 'Add Job', 'Delete Job', 'Manage Job', 'Cancel Job', 'Refresh Job', 'View Log', and 'Run Job'. Below the toolbar is a table with columns: 'Job Name', 'Last Scheduled Run', 'Next Scheduled Run', 'Job State', 'Last Run Job Status', 'Modified By', and 'Modified On'. The table lists two jobs: 'TechPubs' (Last Scheduled Run: 2020-05-26 12:11:27, Job State: Completed, Last Run Job Status: Partial Success) and 'TechPubs' (Last Scheduled Run: 2020-05-26 12:05:30, Job State: Completed, Last Run Job Status: Partial Success). The 'View Log' button is highlighted, and a callout box points to it with the text 'Select a job and click here to view its log'. A 'Logs' window is open, displaying the execution log for the selected job. The log contains the following entries:

```
[26/05/20 12:29:23.023 PDT] 1_TechPubs : Start Job Execution
[26/05/20 12:29:23.023 PDT] 1_TechPubs : Start Create/Get SystemName : Publication_System

ment Table)	
Source Column (Or Data Movement Column)	Source Column
Source Column Datatype (Or Data Movement Column Datatype)	Source Column Datatype and length Note: Check whether datatype and length are added to the corresponding fields. If not, you need to correct it manually.

Limitations

The following list summarizes the limitations of erwin DM Connect for DI.

- If table's or column's Definition property is updated in a model, the update is not exported when the job is run again. To export the updated Definition, set the job's Export Options to Delete & Reload.
- When you apply an NSM file to a model, it is applied at the model-level. Therefore, it is applied to all versions of the model.
